Manufacturer: Rexam Healthcare
Model: Squeeze Lok Low Profile
ASTM Type: IB

Description:
This is a one piece plastic continuously threaded closure (Figure 1).

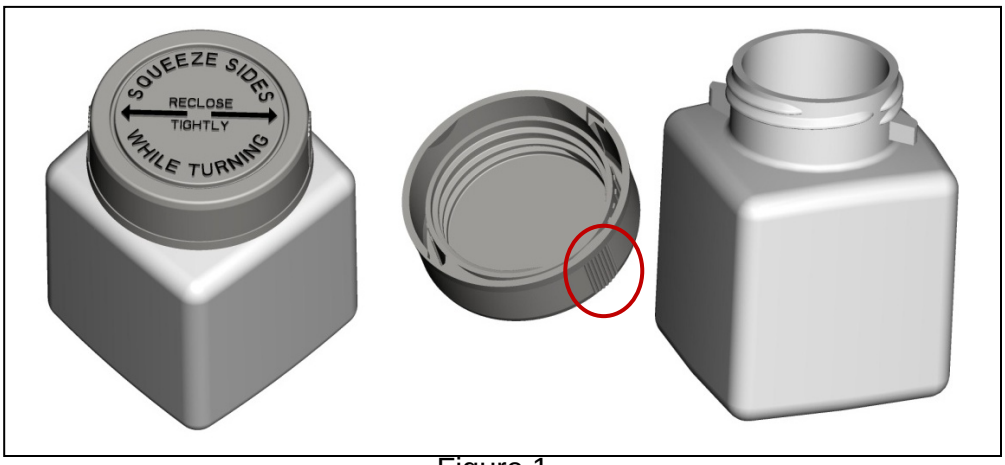

Figure 1

The closure is opened by squeezing two sides of the closure and simultaneously turning it counterclockwise. The side of the closure is smooth around its entire circumference, except at the two squeeze points where it has a series of vertical lines at the bottom of the closure (red circles in Figures 1 and 2). The two squeeze points are 180° apart. The inside of the closure has two triangular lugs 180° apart, which are 90° away from the squeeze points (see double headed arrow in Figure 2).

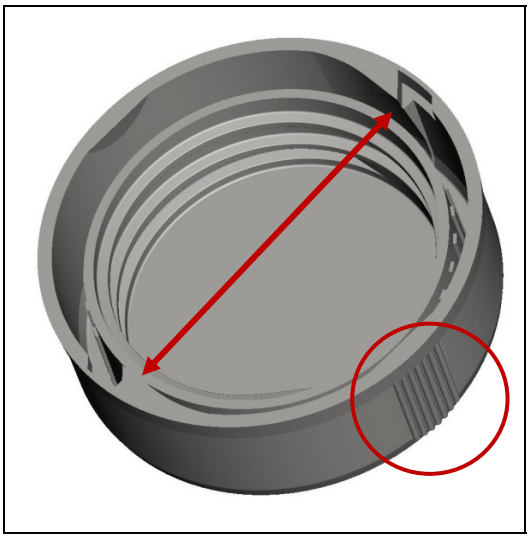

Figure 2

The two triangular lugs lock into two bayonets on the bottle neck finish to keep the package closed.

The manufacturer’s instructions on the closure are (Figure 3):
