				use, which resulted in the interim finding. EPA subsequently determined that there are no reasonably foreseen conditions of use for the new chemical substances and the PMN submitter provided additional information that changed the environmental hazard profile of the new chemical substance. EPA's final determination that the new chemical substances are not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substances under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. View the determination document.

P-17-0246	02/28/2017	Recommended 'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination	03/20/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination	05/11/2017	
P-17-0245	02/28/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	03/20/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risk to workers and the general population and that the substance may degrade to a persistent, bioaccumulative, and toxic chemical, which resulted in the interim finding. The submitter provided additional information indicating there will be no releases to water and that disposal of wastes will be by RCRA-certified hazardous waste incineration. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment	04/15/2019	

Case Number	Received Date	Interim Status	Scoping or Focus Meeting Date	Final Disposition	Effective Date	SNUR Effective Date
				because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR.

P-17-0234	02/10/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health	03/06/2017	‘Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.* *In EPA’s original screening analysis for this PMN in 2017, EPA identified potential risks to workers, which resulted in the interim	12/18/2019	

Case Number	Received Date	Interim Status	Scoping or Focus Meeting Date	Final Disposition	Effective Date	SNUR Effective Date
				finding. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the proposed Significant New Use Rule (SNUR).

P-17-0220	01/25/2017	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment	03/09/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2017, EPA identified potential for risk for lung effects from cationic binding and potential for risk to the environment, which resulted in the interim finding. The PMN submitter clarified the processes used for equipment cleaning and handling of wastes and provided processing information indicating that although there may be potential for worker inhalation exposure, cationic binding will not occur because of interaction of the new chemical substance with another substance in the formulation. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN where estimated surface water concentrations indicate unreasonable risk to the environment is not likely and lung effects are not likely. P-17-0152	11/23/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to health	12/19/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination *In EPA's original screening analysis for this PMN in 2017, EPA identified potential for lung effects from cationic binding and risk to the environment, which resulted in the interim finding. Based on amendments to the PMN, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the amended PMN where estimated releases to water are lower than in the initial assessment and inhalation exposures are not expected, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an	04/15/2019

P-16-0538	08/26/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment	10/31/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA determined there was insufficient information to evaluate effects for human health concerns for lung surfactancy and may present a risk for intended and foreseeable uses based on ecotoxicity concerns, which resulted in the interim finding. Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. The submitter provided toxicity data on the new chemical substance and clarification on their processes that lead to a revised risk assessment. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present	09/14/2020

P-16-0512	08/08/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and exposure-based	10/27/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *. In EPA's original screening analysis for this PMN in 2016, EPA identified that information was insufficient to evaluate human health risks, and identified exposure-based concerns, which resulted in the interim finding. EPA subsequently determined that there are no reasonably foreseen conditions of use for the new chemical substance and the PMN submitter provided clarifying information that changed the human health hazard profile. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified. P-16-0510	08/05/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects	10/24/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In 2016, EPA's original screening analysis for this PMN resulted in the interim finding listed to the Interim Status column. In response to EPA's recommendation, the submitter requested EPA perform an assessment using read-across for a particular analogue (an acrylamide). In considering the submitter's request, EPA identified additional analogues which it deemed more predictive (acrylates) than the submitter's suggested analogue for conducting a reasoned evaluation for the PMN substance. EPA conducted risk evaluation with both analogues and based on the analogue EPA deemed most predictive concluded the PMN substance was not likely to present unreasonable risk. Additional details regarding the analogues and risk evaluation are provided in the Determination document.	07/30/2018

P-16-0400	06/22/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment and exposure-based	07/11/2016	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination* *In EPA's original screening analysis for this PMN in 2016, EPA identified potential for health effects and risk to the environment, which resulted in the interim finding. Upon further review of submitted data on analogous chemical substances, EPA revised its hazard and risk assessment for the new chemical substance. EPA's final determination that the chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the conditions of use. 				foreseen conditions of use, which resulted in the interim finding. EPA's final determination that the chemical substance is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the PMN where the substance is manufactured in an amorphous form and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). P-16-0092	06/22/2016	Recommended section 5(e) Consent Order - Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to the environment and exposure-based	12/03/2015	"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination. *In EPA's original screening analysis for this PMN in 2015, EPA determined that certain exposure criteria were met and identified concerns for ecotoxicity, which resulted in an interim decision to require testing by order. The submitter provided the proposed test data during the review period, removing the basis for the order. The chemical substance is not likely to present an unreasonable risk of injury to health or the environment, without consideration of costs or other nonrisk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator under the conditions of use, based on the risk assessment for the intended conditions of use and EPA's issuance of a proposed SNUR to address certain reasonable foreseen	07/31/2019

		Insufficient information available to permit a reasoned evaluation of the health effects and may present an unreasonable risk of injury to health				
P-14-0482	06/22/2016	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	05/05/2014	"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination *In EPA's original screening analysis for this PMN in 2014, EPA identified potential human health risk to workers, substantial releases, and risk to the environment, which resulted in the interim finding. The submitter amended the PMN, revising the production volume and intended conditions of use. EPA's final determination that the new chemical is not likely to present unreasonable risk is based on EPA's risk assessment for the chemical substance under the intended conditions of use described in the amended PMN where worker exposure is expected to be controlled through the use of appropriate PPE, expected releases to the environment are lower than originally estimated, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall	04/15/2019	

Case Number	Received Date	Interim Status	Scoping or Focus Meeting Date	Final Disposition	Effective Date	SNUR Effective Date
				under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR.

Based on additional information provided by the submitter, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that fall under the restrictions of the proposed SNUR are not likely to present unreasonable risk of injury to health or the environment because (1) those conditions of use are not likely to be commenced during the pendency of the proposed SNUR and (2) upon finalization of the SNUR those conditions of use would be prohibited unless and until EPA makes an	08/29/2019

				affirmative determination that the significant new use is not likely to present an unreasonable risk or takes appropriate action under section 5(e) or 5(f). View the determination document and the terms of the SNUR.		
P-17-0346	07/10/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and to the environment	08/03/2017	"Not likely to present an unreasonable risk" section 5(a)(3)(C) determination. *In EPA's original screening analysis for this PMN in 2017, EPA identified potential risks to the environment, workers, and the general population, which resulted in the interim finding. Based on amendments provided by the submitter that include measures to reduce worker inhalation exposure to the new chemical substance and clarifying releases to water, EPA revised its assessment for the intended conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and EPA's issuance of a proposed SNUR to address certain reasonably foreseen uses. Conditions of use that	07/31/2019

P-17-0360	07/18/2017	Recommended section 5(e) Consent Order - May present an unreasonable risk of injury to health and exposure-based	08/07/2017	'Not likely to present an unreasonable risk' section 5(a)(3)(C) determination.* *In EPA's original screening analysis for this PMN in 2017, EPA identified potential for risk to human health under reasonably foreseen conditions of use and potential for substantial exposure and release to the environment, which resulted in the interim finding. EPA subsequently determined that there are no reasonably foreseen conditions of use. EPA's final determination that the new chemical substance is not likely to present unreasonable risk is based on EPA's revised hazard and risk assessment for the chemical substance under the intended conditions of use, where EPA expects that employers will require and workers will use appropriate personal protective equipment in a manner adequate to protect them, and no unreasonable risk to the environment was identified.
