We discussed the testing/data needed for HF. Group is somewhat confused over need for acute/POE vs. chronic data. I indicated I thought they could make the case that systemic HF effects apart from F^- ~~[illegible]~~ toxicity was not a concern but we needed the data: Some PK information, rate constant for HF dissociation and showing that F^- produced the delayed pain associated w/ acute exposure. I suggested Vicki DeMarco & I would meet with them if they requested it for clarification.
