

Memorandum of Understanding

Regarding Low Pollution Marine Engines
Between
Environmental Protection Agency New England
Connecticut Department of Environmental Protection
National Marine Manufacturers Association
Marine Retailers Association of America
Connecticut Marine Trades Association
And
Participating Retailers

Environmental Protection Agency New England (hereafter "EPA NE"), Connecticut Department of Environmental Protection (hereafter "CT DEP"), National Marine Manufacturers Association (hereafter "NMMA"), Marine Retailers Association of America (hereafter "MRAA"), Connecticut Marine Trades Association (hereafter "CMTA") and participating marine engine retailers (hereafter "Participating Retailers") have established a voluntary agreement to support the use of low pollution outboard (OB) and personal watercraft (PWC) engines by the boating public of Connecticut. The United States Environmental Protection Agency (EPA) has established that, from 1998 to 2006, manufacturers of OB/PWC engines must meet increasingly more stringent average emission rates. To achieve the yearly emission rates required by the regulations, it is anticipated that manufacturers will each year build increasing numbers of low pollution marine engines. EPA NE, CT DEP, NMMA, MRAA, CMTA and Participating Retailers have entered into this Memorandum of Understanding (MOU) in an effort to accelerate the phase-in of these low pollution marine engines in Connecticut.

Participating Retailers agree to make every reasonable effort to sell low pollution OB/PWC marine engines. Low pollution engines are those that meet or exceed the 2006 EPA requirements for manufacturers emissions standards, such as direct fuel injection two-stroke and four-stroke engines. The goal for the N.E. Region and Connecticut is to sell low pollution OB/PWC marine engines at the following percentages of the total number of new model year marine engines sold per year:

2002: seventy five percent (75%) or more
2003: eighty percent (80%) or more
2004-2005: ninety five percent (95%) or more

NMMA, MRAA and CMTA agree to support their members in achieving these goals through providing assistance in areas such as marketing, communications, training and research.

This MOU assumes that sufficient quantities of low pollution OB/PWC engines will be available

for purchase by Connecticut boaters and that these engines will be available from marine manufacturers whose production and delivery capacities will be able to support this agreement. Participating Retailers will use their best efforts to obtain low pollution OB/PWC marine engines from the manufacturers of these engines.

Participating Retailers agree to make available to CMTA annual reports detailing the percentage of low pollution OB/PWC marine engines sold commencing with the calendar year 2002. These reports will be submitted to CMTA by the last day of December for each reporting year. CMTA agrees to make available to EPA NE and CT DEP aggregate sales information on progress toward these goals.

EPA NE and CT DEP agree to support the use of low pollution OB/PWC marine engines by the boating public. As part of this effort however, EPA NE and CT DEP do not endorse, certify or confirm the effectiveness of any brand or manufacturer of a particular technology. EPA NE and CT DEP will work jointly to develop public education materials such as fact sheets, a web page, and broadcast public service announcements. Further, EPA NE will work with other New England state agencies and municipalities to support the use of low pollution OB/PWC marine engines by the State of Connecticut and its communities.

This agreement has been executed on the dates shown below between EPA NE, CT DEP, NMMA, MRAA, CMTA and Participating Retailers.
