UNIFIED WATERSHED ASSESSMENT
RESTORATION PRIORITIES

The USDA/NRCS and the Louisiana Department of Environmental Quality (LDEQ) met on several occasions to discuss the unified watershed assessment and prioritization. These agencies concur that restoration priorities for Louisiana will be based upon the State's assessment of water quality, as documented in the 305(b) report, which is the basis of the unified watershed assessment. The state assesses water quality in 476 subsegments of the 59 eight digit HUC watersheds. For the unified watershed assessment, the USGS hydrologic units are assigned to a category based upon the predominant state subsegment assessment within the hydrologic unit. The state's assessment designates each subsegment in one of five water quality categories (See attachment number XX, map of hydrologic units and subsegments): 1) Full; 2) Threatened; 3) Partial; 4) Not; 5) Insufficient Data. The USGS eight-digit hydrologic unit is a large area, and since most restoration and implementation projects are located within a smaller watershed, the State and USDA/NRCS will continue to utilize the LDEQ's subsegment assessment in setting priorities. The USFWS also considers the LDEQ's water quality assessment information in setting priorities. The LDEQ has also established priorities for TMDL work based upon its water quality assessment. Prioritization of restoration and TMDL activities will be independent of Unified Watershed Assessment eight-digit HUC Watershed category and will be designated as follows:

- watersheds assessed as not supporting = high priority
- watersheds assessed as partially supporting = medium priority
- watersheds assessed as threatened = low priority
- watersheds assessed as insufficient data (INSD)(Category IV) = high priority for further monitoring and analysis
- watersheds where threatened or endangered species are known to occur = high priority

The LDEQ has committed to a twelve-year schedule for development of TMDLs, with plans to focus on two or three river basins each year. For 1998-2000, the target basins are the Mermentau River Basin, Vermilion-Teche River Basin, Calcasieu River Basin, and Ouachita River Basin. TMDL work in the Barataria Basin is scheduled to begin in 2000. The Mississippi River and Atchafalaya River will be addressed on a continuing basis, with long-term monitoring continuing on those rivers. The entire twelve-year schedule is attached.

The LDEQ will encourage all federal, state or local implementation programs to concentrate technical and financial assistance in watersheds determined to be in the high priority category. When selecting watersheds for restoration program activities, additional consideration or ranking priority will be given to watersheds that contain threatened and endangered species and/or scenic streams.

UNIFIED WATERSHED ASSESSMENT RATIONALE

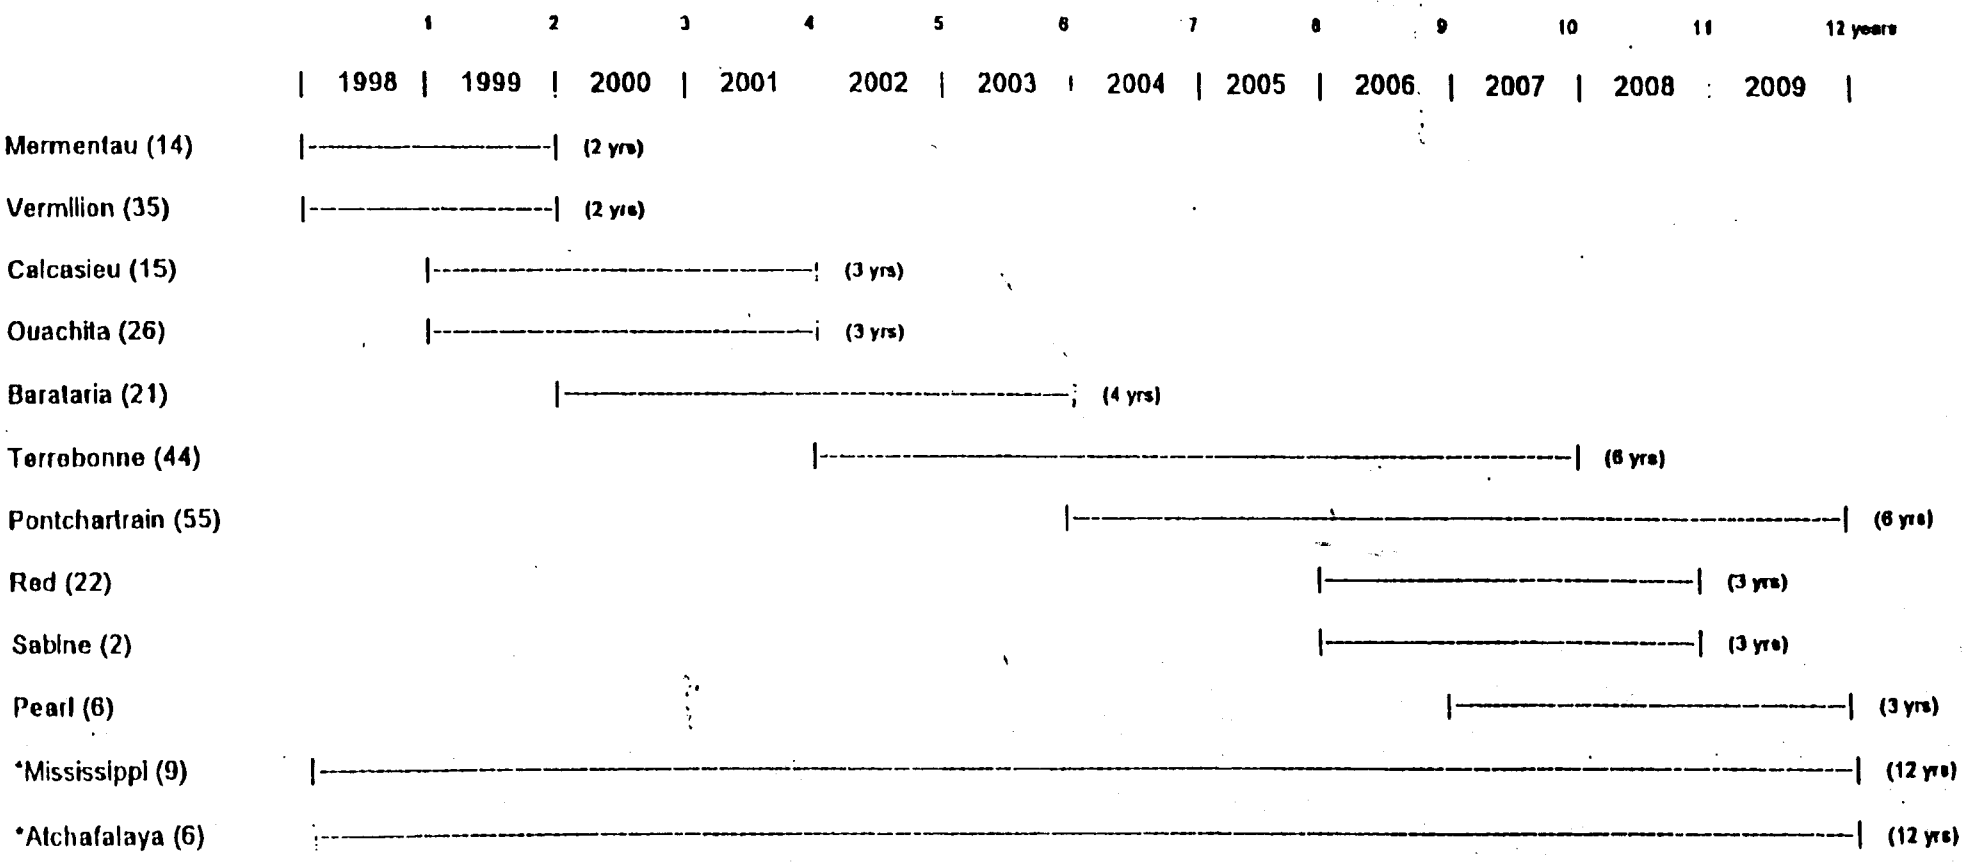
The Unified Watershed Assessment for Louisiana was based upon existing assessment information generated through the State's biennial water quality assessment and 303(d) list. This assessment was developed from the State's ambient water quality monitoring data, compliance information, complaint investigations, and fish tissue contaminants data. This assessment involves a determination of the percentage of water quality samples taken over the most recent five years which exceed established water quality criteria. This determination is made for each of the State's 478 water quality management subsegments. This information was overlain with U.S.G.S. hydrologic unit (HU) boundaries on a geographic information system (GIS) in order to aggregate assessment information into the U.S.G.S. hydrologic units. Each U.S.G.S. hydrologic unit was assigned to one of four watershed assessment categories defined in the "Framework for Unified Watershed Assessments, Restoration Priorities, and Restoration Action Strategies".

Colors were used to identify the water quality condition of the smaller watersheds (subsegments). The areas of the subsegments were derived, and the overall assessment for each hydrologic unit was determined by the total area of the predominant water quality condition within a hydrologic unit. The predominant condition is considered to be that which comprises 50% or greater of the total area within a hydrologic unit.

The water quality condition of a subsegment is determined by the frequency of water quality criteria exceedence and the existence of any fish consumption or human health advisory for a waterbody within the subsegment. This condition is described in terms of use (criteria) support, the categories being fully supporting, threatened, partially supporting, and not supporting. For the unified watershed assessment, hydrologic units in which 50% or more of the subsegment area is not fully supporting all designated uses were classified as Category I. Those for which there is insufficient data to make an assessment are classified as Category IV. That is, for those hydrologic units where 50% or more of the subsegment area had been assessed as having insufficient data, the hydrologic unit was categorized as having insufficient data (Category IV). The hydrologic units wherein the predominant use support is fully supporting were categorized as Category II. Category III was not used as there do not appear to be any watersheds where most of the area consists of pristine aquatic systems located on government-administered lands.

ATTACHMENT A

LOUISIANA TMDL SCHEDULE



Values in parentheses after the basin names indicate number of waterbody segments listed on the 1996 303(d) list. (Total = 255)
*EPA/DEQ joint responsibility.

Louisiana's Clean Water Initiative/Unified Watershed Assessments Linking HUCs with LDEQ subsegment assessments

(Key to abbreviations and terms at end of table)

HUC	HUC Support	LDEQ Subsegment	Subsegment description	1998 305(b) Overall	Individual Designated Use and Support						
					PCR	SCR	FWP	ONR	DWS	SFP	AGR

Key to abbreviations and terms

HUC - Hydrologic Unit Code, an eight-digit code for hydrologic units as defined by the United States Geological Survey

LDEQ - Louisiana Department of Environmental Quality

1998 305(b) - Louisiana Department of Environmental Quality, Office of Water Resources, 1998 *Water Quality Inventory*

Full (F) - Fully supporting designated use or uses; based on Louisiana's 1998 *Water Quality Inventory.*

Threatened (T) - Fully supporting designated use or uses, but threatened with impairment if sources of pollution not reduced; based on Louisiana's 1998 *Water Quality Inventory*

Partial (P) - Partially supporting designated use or uses; based on Louisiana's 1998 *Water Quality Inventory*

Not (N) - Not supporting designated use or uses; based on Louisiana's 1998 *Water Quality Inventory*

INSD - Insufficient data to make a defensible assessment; based on Louisiana's 1998 *Water Quality Inventory.* Considered Category IV under Unified Watershed Assessment

Impaired - Term indicating preponderance of geographical area within HUC is not supporting designated uses. Considered Category I under Unified Watershed Assessment

Louisiana Department of Environmental Quality designated uses, as defined in Louisiana Administrative Code, 33:IX.1111

PCR - Primary Contact Recreation, recreational uses in which there is prolonged body contact with the water involving considerable risk of absorbing waterborne constituents

SCR - Secondary Contact Recreation, recreational uses in which body contact with the water is incidental or accidental

FWP - Fish and Wildlife Propagation, includes prevention of contamination of aquatic biota consumed by humans

ONR - Outstanding Natural Resource

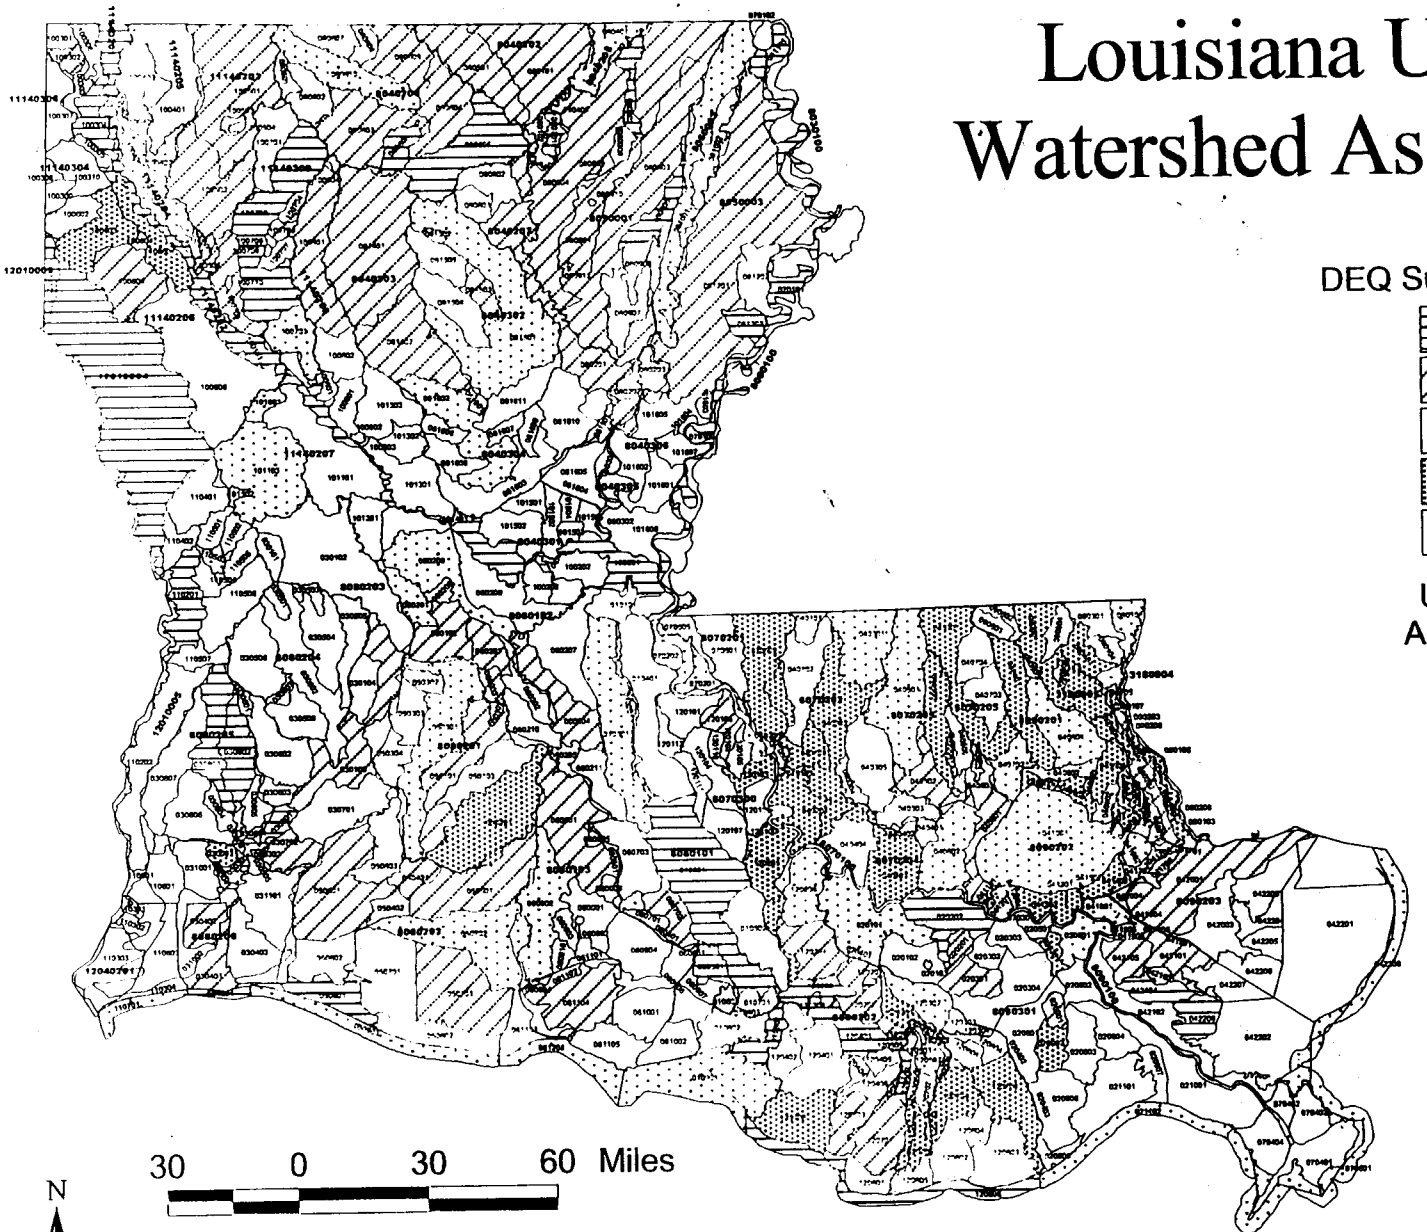
DWS - Drinking Water Supply

SFP - Shellfish Propagation

AGR - Agricultural use for irrigation or livestock.

If designated use support shown as "." then waterbody does not have that use

Louisiana Unified Watershed Assessment



DEQ Subsegment Assessment

- Full
- Threatened
- Partial
- Not
- Insufficient Data

Unified Watershed Assessment by HUC

- Category I (Impaired)
- Category II (Full)
- Category III (Pristine)
- Category IV (Insufficient Data)

WQ Map No. 1998-02-004, June 1998

Some subsegments with overall full support in 1998 305(b) have one or more uses impaired and were, therefore, included with impaired subsegments.
