INTRODUCTION

The United States Environmental Protection Agency (EPA), in partnership with the States[1], biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this **Preliminary** 2001 National Biennial Report is to communicate the initial findings of EPA's 2001 hazardous waste reporting data collection efforts and to allow the States and EPA to assess the quality and completeness of the State's data submissions on which the **FINAL** 2001 National Biennial Report will be based. The **Preliminary** 2001 National Biennial Report consists of three volumes of data:

- The ***National Analysis*** data presents a detailed look at waste-handling practices in the States, and largest facilities nationally, including (1) the quantity of waste generated, managed, shipped and received, and interstate shipments and receipts and (2) the number of generators and managing facilities,

- The ***State Detail Analysis*** data is a detailed look at each State's waste handling practices, including overall totals for generation, management, shipments and receipts, as well as totals for the largest fifty facilities, and

- The ***List of Sites*** identifies every hazardous waste facility in the United States that submitted a hazardous waste report in 2001.

[1]The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

RCRA HAZARDOUS WASTE

Throughout this Report, the term RCRA hazardous waste refers to solid waste assigned a Federal Hazardous Waste Code and regulated by RCRA. Some States elect to regulate wastes not regulated by EPA; these wastes are assigned State Hazardous Waste Codes and may not be included in this Report. The reader can find more detailed explanations in the *RCRA Orientation Manual* (http://www.epa.gov/epaoswer/general/orientat/) and in the Code of Federal Regulations in 40 CFR Parts 260 and 261. Please refer to Appendix D of this Report for a complete list of EPA Hazardous Waste Codes used by the regulated community for their 2001 Biennial Report submissions. Details about the information submitted by the regulated community can be found in the *2001 Hazardous Waste Report Instructions and Forms* (http://www.epa.gov/oswfiles/rcrainfo/brc.htm).

RCRA HAZARDOUS WASTE GENERATION

RCRA hazardous waste generation information is obtained from data reported by RCRA large quantity generators (LQGs). A generator is defined as a Federal large quantity generator if:

- the generator generated in any single month 1,000 kg (2,200 pounds or 1.1 tons) or more of RCRA hazardous waste; or

- the generator generated in any single month, or accumulated at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or

- the generator generated, or accumulated at any time, more than 100 kg (220 pounds) of spill cleanup material contaminated with RCRA acute hazardous waste.

All facilities that were LQGs in 2001 are required to provide EPA with 2001 waste generation and management information. It is important to note that the generators identified in this Report have been included based on the most current information made available to EPA by

the States. However, the generator counts may include some generators that, when determining whether they were LQGs, used a lower State-defined threshold for LQGs, counted wastes regulated only by their States, or counted wastes exempt from Federal regulation.

RCRA Hazardous Waste Management

RCRA hazardous waste management information is obtained from data reported by facilities which treated, stored, or disposed of RCRA hazardous wastes on site during 2001. Only wastes that were treated or disposed of in 2001 are included in the management quantities in this Report.

RCRA Hazardous Waste Shipments and Receipts

RCRA hazardous waste shipment information is obtained from data reported by both RCRA LQGs and facilities which treated, stored, or disposed of RCRA hazardous wastes on site during 2001. RCRA hazardous waste receipt information is obtained from data reported by facilities which treated, stored, or disposed of RCRA hazardous wastes on site during 2001. All reported shipments identified for inclusion in the national report are included in the waste shipment quantities in this Report, even if the waste was shipped to a transfer facility. In some instances, waste is transferred within a physical location that has more than one EPA Identification Number. These waste transfers are treated as shipments.

RCRA hazardous waste interstate shipment quantities include wastes generated in one State and shipped to a receiver in a different State, excluding shipments to a foreign country. Interstate shipments are calculated from information provided by waste shippers. RCRA hazardous waste interstate receipts include all wastes received by a State which differs from the State of origin, excluding foreign imports. RCRA hazardous waste interstate receipts are calculated from information provided by facilities that received the wastes.

THE DATA PRESENTED IN THIS PRELIMINARY NATIONAL BIENNIAL REPORT

Beginning with the 2001 biennial reporting cycle, EPA changed the reporting requirements for RCRA hazardous wastes. EPA would like to caution all readers of this Report that the changes to these reporting requirements will make cursory comparisons of the **Preliminary** 2001 National Biennial Report data to earlier National Report data misleading.

For this **Preliminary** 2001 National Biennial Report, EPA has included all data that was identified by the State or implementing EPA office for inclusion in the Report. This may include wastewaters, waste not physically generated on-site, storage and transfer only waste and wastes described with only State Hazardous Waste Codes. This is significant, because prior to the 2001 National Biennial Report, EPA excluded wastes with wastewater characteristics, waste not physically generated on-site, storage and transfer only waste and wastes described with only State Hazardous Waste Codes. For the 2001 National Biennial Report, it has become the individual States' responsibility to properly identify data that is to be included or excluded from the National Report.

As stated earlier, this **Preliminary** Report is provided to allow the States and EPA to assess the quality and completeness of the data submissions on which the **FINAL** 2001 National Biennial Report will be based. **For this reason, EPA would like to caution the use of this Preliminary data and advise all readers to expect SIGNIFICANT changes to the data for MANY States when they submit their Final data to EPA.**

EPA did not receive data in the proper format from the State of Wisconsin prior to the deadline for developing this Report, therefore no Wisconsin data will appear in this Report or the Preliminary 2001 Biennial Report data files. The State of Minnesota submitted partial data to EPA, but, this data did not include any of their facilities' data regarding RCRA hazardous wastes managed on site or received from an off-site source during 2001 and managed on site. EPA anticipates that each States' 2001 Biennial Report data will be complete and included in the FINAL 2001 National Biennial Report and the FINAL 2001 Biennial Report data files.
