Executive Summary

Chapter 1 Introduction

1.1 Purpose of this Manual 1-1
1.2 Manual Overview 1-2
1.3 Stormwater Basics 1-4
1.3.1 Physical and Chemical Characteristics of Stormwater Runoff 1-4
1.3.2 Best Management Practices 1-5
1.4 Stormwater BMP Monitoring 1-9
1.5 The International Stormwater BMP Database 1-10
1.6 Regulatory Environment 1-11
1.7 Manual Scope Limitations 1-13
1.8 References 1-15

Chapter 2 Developing a Monitoring Plan

2.1 Step 1. Define Study Objectives/State the Problem 2-3
2.1.1 Key Activities for Step 1 2-3
2.1.2 Outputs from Step 1 2-7
2.2 Step 2. Identify Study Goals 2-8
2.2.1 Key Activities for Step 2 2-9
2.2.2 Outputs from Step 2 2-13
2.3 Step 3. Identify Information Inputs 2-13
2.3.1 Key Activities for Step 3 2-13
2.3.2 Determining Number of Storms Needed for Meaningful Statistical Assessment 2-15
2.3.2.1 General Considerations 2-15
2.3.2.2 Sampling Strategies and Determination of Number of Samples for Paired Evaluations 2-16
2.3.3 Outputs from Step 3 2-20
2.4 Step 4. Define the Boundaries of the Study 2-22
2.4.1 Key Activities for Step 4 2-22
2.4.2 Outputs from Step 4 2-25
2.5 Step 5. Develop the Analytical Approach 2-25
2.5.1 Key Activities for Step 5 2-26
2.5.2 Outputs from Step 5 2-27
2.6 Step 6. Specify Performance or Acceptance Criteria 2-28
2.6.1 Key Activities for Step 6 2-28
2.6.2 Outputs from Step 6 2-30
2.7 Step 7. Develop the Plan for Obtaining Data 2-31
2.7.1 Key Activities for Step 7 2-31

2.7.2 Outputs from Step 7 2-31
2.8 Step 8. Assess Reasonableness of Plan and Refine 2-32
2.8.1 Key Activities for Step 8 2-32
2.8.2 Outputs from Step 8 2-33
2.9 Conclusion 2-36
2.10 References 2-37

Chapter 3 Hydrologic and Hydraulic Monitoring

3.1 Meteorological Data Collection 3-2
3.1.1 Precipitation 3-2
3.1.1.1 Types of Precipitation Gages 3-2
3.1.1.2 Site Proximity 3-5
3.1.1.3 Number of Gages 3-6
3.1.2 Collection of Other Meteorological Data 3-6
3.1.2.1 Atmometers 3-6
3.1.2.2 Weather Stations 3-7
3.2 Flow Measurement Methods 3-7
3.2.1 Primary Flow Measurement Devices 3-9
3.2.1.1 Weirs 3-13
3.2.1.2 Flumes 3-13
3.2.1.3 Selection Considerations 3-14
3.2.2 Secondary Flow Measurement Devices 3-18
3.2.2.1 Float Gage 3-19
3.2.2.2 Bubbler Tube 3-20
3.2.2.3 Ultrasonic Depth Sensor 3-21
3.2.2.4 Pressure Probe 3-22
3.2.2.5 Ultrasonic “Uplooking” 3-22
3.2.2.6 Radar/Microwave 3-22
3.2.3 Velocity-Based Methods 3-23
3.2.3.1 Ultrasonic (Doppler) Sensors 3-24
3.2.3.2 Electromagnetic Sensors 3-24
3.2.3.3 Acoustic Path 3-25
3.2.3.4 Rotating-Element Current Meters 3-25
3.2.3.5 Pressure Sensors 3-25
3.2.3.6 Acoustical Sensors 3-26
3.2.3.7 Float-and-Stopwatch Method 3-26
3.2.3.8 Head Stick Estimated Flow 3-26
3.2.3.9 Deflection (or Drag-Body) Method 3-27
3.2.3.10 Tracer Studies 3-27
3.2.3.11 Methods Suitable for Calibration 3-27
3.2.4 Data Loggers 3-28
3.2.4.1 Programmability 3-30
3.2.4.2 Data Capacity 3-30
3.2.4.3 Communications 3-31
3.2.4.4 Power Requirements 3-32

3.2.5 Other Flow Measurement Methods 3-33
3.2.5.1 Direct Measurement Methods 3-33
3.2.5.2 Tracer Dilution Methods 3-34
3.2.5.3 Pump Discharge Method 3-34
3.2.5.4 Stage-Based Variable Gate Meters 3-35
3.2.5.5 Stage-Based Equations 3-35
3.2.6 QA/QC of Flow Measurements 3-37
3.2.7 Infiltration Estimates 3-37
3.2.8 Common Flow Monitoring Challenges for LID Techniques 3-37
3.3 Conclustion 3-38
3.4 References 3-38

Chapter 4 Water Quality Monitoring

4.1 Water Quality Parameters and Analytical Methods 4-2
4.1.1 Selecting Parameters 4-2
4.1.2 Dissolved vs. Total Metals 4-6
4.1.3 Measurement of Suspended Solids Concentration 4-8
4.1.4 Measurement of Gross Solids 4-11
4.1.5 Microbiological Sampling 4-13
4.1.6 Analytical Methods 4-14
4.2 Sampling Location 4-16
4.2.1 Upstream 4-17
4.2.2 Downstream 4-17
4.2.3 Intermediate Locations 4-17
4.3 Water Quality Sample Collection Techniques 4-18
4.3.1 Grab Samples 4-18
4.3.2 Composite Samples 4-19
4.3.3 Automated Sampling 4-21
4.3.3.1 Automated Sampling Equipment 4-22
4.3.3.2 In-Situ Water Quality Devices 4-25
4.3.3.3 Remote Communication with Automatic Equipment 4-26
4.3.4 Manual Sampling 4-27
4.3.4.1 Manual Grab Sampling Equipment 4-28
4.3.4.2 Manual Composite Sampling Equipment 4-28
4.4 Sediment Sampling 4-29
4.5 Soil (Infiltration Media) Sampling 4-30
4.6 Groundwater Sampling 4-30
4.7 QA/QC for Water Quality Sampling 4-32
4.7.1 Sampling Methods 4-32
4.7.2 Grab Sample Collection Techniques 4-32
4.7.3 Contamination/Blanks 4-33
4.7.4 Reconnaissance and Preparations 4-34
4.7.4.1 Laboratory Coordination 4-34
4.7.4.2 Sample Containers/Preservation/Holding Times 4-35
4.8 Field QA/QC Procedures 4-37
4.9 Laboratory QA/QC Procedures 4-38

4.10 Conclusion 4-38
4.11 Refererences 4-39

Chapter 5 Implementation of Monitoring Plan

5.1 Training of Personnel 5-1
5.2 Installation of Equipment 5-2
5.3 Testing and Calibrating Equipment 5-4
5.4 Conducting Monitoring 5-5
5.5 Coordinating Laboratory Analysis 5-9
5.6 Conclusion 5-10
5.7 References 5-11

Chapter 6 Data Management, Validation, and Reporting

6.1 Recommendations for Data Management 6-1
6.2 Data Validation 6-2
6.3 Using or Establishing Databases 6-3
6.4 Data Entry Approaches 6-3
6.5 QA/QC Techniques 6-4
6.5.1 Outlier Screening/Analysis 6-4
6.5.2 Preliminary Data Evaluation 6-5
6.6 Reporting Results 6-7
6.7 Submitting Data to the International Stormwater BMP Database 6-8
6.7.1 Overview of Data Requirements for the BMP Database 6-8
6.7.2 General Test Site Information 6-9
6.7.3 Monitored Events 6-9
6.7.4 Watershed Information 6-10
6.7.5 General BMP Information 6-10
6.7.6 Monitoring Stations 6-14
6.7.7 Monitoring Results 6-14
6.8 Conclusion 6-15
6.9 References 6-15

Chapter 7 BMP Performance Analysis

7.1 Concentrations, Loads, and Volume Reductions 7-1
7.1.1 Concentrations 7-1
7.1.2 Contaminant Loads 7-2
7.1.3 Event Mean Concentrations 7-2
7.1.4 Volume Reductions 7-2
7.2 Data Analysis and Underlying Principles 7-3
7.2.1 Descriptive Statistics 7-3
7.2.1.1 Parametric Statistics 7-4
7.2.1.2 Non-parametric Statistics 7-5
7.2.2 Relevance of the Lognormal Distribution 7-5
7.2.3 Comparative Statistics and Hypothesis Tests 7-6

7.2.3.1 Independent Data Sets ... 7-7
7.2.3.2 Paired Data Sets ... 7-7
7.2.4 Graphical Data Analysis ... 7-8
7.2.4.1 Histograms ... 7-8
7.2.4.2 Box Plots ... 7-8
7.2.4.3 Quantile Plots and Probability Plots ... 7-10
7.2.4.4 Scatter Plots ... 7-12
7.2.5 Analysis of Censored Data ... 7-13
7.2.5.1 Simple Substitution ... 7-14
7.2.5.2 Maximum Likelihood Estimation (MLE) ... 7-14
7.2.5.3 Regression on Order Statistics (ROS) ... 7-14
7.2.5.4 Kaplan-Meier (K-M) ... 7-15
7.2.5.5 Recommended Approach for Handling Nondetects ... 7-15
7.2.6 Bootstrap Methods ... 7-16
7.3 Error Analysis and Measurement Accuracy ... 7-17
7.3.1 Expressing Errors ... 7-17
7.3.2 Propagation of Errors ... 7-18
7.4 Performance of BMP and BMP Systems ... 7-18
7.4.1 Comparative Measures of BMP Efficiency ... 7-19
7.4.2 Multivariate and Non-linear Model ... 7-21
7.4.3 Reference Watershed Methods ... 7-21
7.4.4 Effluent Probability Method ... 7-23
7.4.5 Statistical Measures Employed by the BMP Database ... 7-25
7.4.5.1 Influent and Effluent Scatter Plots ... 7-26
7.4.5.2 Box Plots ... 7-27
7.4.5.3 Probability Plots ... 7-30
7.4.5.4 Overview of Results of Efficiency and Effluent Quality by BMP Type and Parameter ... 7-32
7.5 Conclusions ... 7-35
7.6 References ... 7-37

Chapter 8 Low Impact Development Monitoring

8.1 Introduction to LID ... 8-1
8.1.1 Basic LID Concepts ... 8-1
8.1.2 What Distinguishes a LID Site? ... 8-4
8.1.3 LID Monitoring Philosophy ... 8-7
8.1.4 Site Level LID Monitoring Challenges ... 8-9
8.2 Monitoring Study Design for LID Projects ... 8-10
8.2.1 LID Monitoring Study Objectives ... 8-11
8.2.2 Use of Reference Watersheds ... 8-12
8.2.3 LID Watershed Characteristics ... 8-14
8.2.3.1 Watershed Geometry ... 8-16
8.2.3.2 Vegetative Cover and Land Uses ... 8-18
8.2.3.3 Imperviousness and Connectivity ... 8-19
8.2.3.4 Soil Properties and Groundwater Conditions ... 8-22

8.2.3.5 Watershed Storage Properties and Conditions 8-23
8.2.4 Composite Site Characteristics 8-26
8.2.4.1 Site Characterization Indicies 8-26
8.2.4.2 Hydrologic Performance Metrics 8-28
8.2.4.3 Recommended Metrics for Reporting to BMP Database 8-30
8.2.5 Hydrologic Characterization 8-34
8.2.5.1 General Water Balance 8-35
8.2.5.2 Regional Water Balance 8-36
8.2.5.3 Thornthwaite Monthly Water Balance 8-37
8.2.5.4 Long-Term Monitoring and Data Representativeness 8-40
8.3 Data Collection and Reporting 8-41
8.3.1 BMP Database Requirements for LID 8-41
8.3.2 Impervious Surface Data Collection 8-42
8.3.3 Hydrologic Data Collection 8-44
8.3.3.1 Quantifying Infiltration 8-44
8.3.3.2 Quantifying Evapotranspiration 8-46
8.3.3.3 Reporting Water Balance Results 8-49
8.3.4 Water Quality Data Collection 8-50
8.3.5 Cost Data 8-50
8.4 Conclusions 8-52
8.5 References 8-52

Chapter 9 Data Interpretation and Performance Evaluation of LID Monitoring Studies

9.1 Drawing Appropriate Conclusion Regarding Volume Reduction 9-1
9.1.1 Data Recorded in the BMP Database 9-2
9.1.2 Metrics for Interpreting Volumetric Results 9-3
9.1.3 Consideration of Measurement Error in Interpretation Methods 9-13
9.1.4 Comparing Performance to Design Objectives and Criteria 9-14
9.2 Water Quality Benefits and Load Reduction 9-16
9.2.1 Interpreting Water Quality Benefits of LID Sites through Reference Watershed Studies 9-16
9.2.2 Potential Groundwater Impacts 9-17
9.3 Comparison of LID to other BMPs 9-18
9.4 Conclusions 9-19
9.5 References 9-19

Chapter 10 LID Monitoring Case Studies

10.1 Cross Plains, WI 10-2
10.2 Burnsville, MN 10-4
10.3 Jordan Cove, CT 10-7
10.4 Somerset, MD 10-9
10.5 Conclusions 10-12
10.6 References 10-12

Appendices

Appendix A Stormwater BMP Database Reporting Parameters
Appendix B Assessment of Approaches to Evaluating BMP Performance
Appendix C Error Analysis
Appendix D Number of Samples Required for Various Powers, Confidence Intervals and Percentile Differences
Appendix E Derivation of the Number of Samples Required to Measure a Statistical Difference in Population Means
Appendix F Relationship of Log-Normal Distributions
