Bellingham, WA 98226

The samples submitted under the above referenced project name and identified by our Golden Specialty laboratory order number have been analyzed, and the data is enclosed. Only results for samples listed on the original Chain of Custody (at end of report) are included in this report. Raw data and subcontract data, if applicable, are attached to this report. Results provided in this report relate only to the samples.

All samples will be kept for no less than five business days after the final report is submitted, unless other arrangements have been made. Samples put on hold or held in canisters due to client issues will incur weekly canister rental fees. Golden Specialty reserves the right to return any unused samples due to hazardous sample matrices. Raw data and final reports will be filed for five years unless otherwise requested by client or regulatory mandates. To protect the integrity and completeness of this report, it must remain attached to this cover letter.

I certify to the best of my knowledge all analytical data presented in this report has been checked for completeness and accuracy, and is free of errors. Any deviations from the stated analytical protocols due to sample matrix have been documented in the laboratory narrative of this analytical report. Unless otherwise noted, any analysis performed by Golden Specialty falls within the scope of our NELAC accreditation and meets all NELAC requirements.

We thank you for selecting Golden Specialty to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Scott Swiggard
Laboratory Director

This analytical report and data associated has been reviewed and prepared specifically for you. The data package represents the best analytical and technical judgment and interpretations of our personnel, in accordance with the Golden Specialty Laboratory Quality Assurance Manual. Golden Specialty Inc. assumes no responsibility for the end use of this document or any portion extracted from it. Unless it is otherwise agreed upon, in writing, and prior to analytical work, Golden Specialty Inc. liability may not exceed the amount invoiced for this order.

Laboratory Narrative

Supplement to Test Report GSL_160978:

The laboratory analysis report number GSL_160978 has been revised; formaldehyde results are re-processed based on an updated calibration.

Accreditation:

The Washington Department of Environmental Quality does not currently offer accreditation for EPA Method 5, EPA Method 202, or NCASI 99.02.

NCASI 99.02 Formaldehyde Calibration:

In order to identify formaldehyde concentrations below the 0.5 ug/ml limit specified in NCASI Method 99.02, an additional calibration point was determined at 0.1 ug/ml. Because this calibration point is outside the method specifications, formaldehyde results identified between 0.1 ug/ml and 0.5 ug/ml are considered to have marginally increased quantitative uncertainty.

Respectfully,

Scott Swiggard
Laboratory Director

This analytical report and data associated has been reviewed and prepared specifically for you. The data package represents the best analytical and technical judgment and interpretations of our personnel, in accordance with the Golden Specialty Laboratory Quality Assurance Manual. Golden Specialty Inc. assumes no responsibility for the end use of this document or any portion extracted from it. Unless it is otherwise agreed upon, in writing, and prior to analytical work, Golden Specialty Inc. liability may not exceed the amount invoiced for this order.

Laboratory Analysis Report

Data Qualifiers and Flags

- MDL – Method Detection Limit
- MQL – Method Quantitation Limit
- SDL – Sample Detection Limit
- SQL – Sample Quantitation Limit
- RPD - Relative Percent Difference
- J – Target analyte is between the MDL and SQL values.
- L – Target analyte recovered below the recovery limits.
- H – Target analyte recovered above the recovery limits.
- B – Target analyte identified in blank run.
- F – RPD/RSD is outside the control limits.
- NC – Not calculated due to division by zero, or negative spike recovery.
- M – Target analyte reported outside control limit due to matrix interference.
- E – Estimated; Target analyte is above the Upper Quantitation Limit, or estimated due to other issue(s) noted in narrative.
- ND - Non-detect; analyte is below the MDL value, or TIC not detected in GC/MS scan.
- A - Sample analyzed outside holding time.
- C - Sample analyzed by FTIR; results estimated.
- I - Internal standard outside acceptable response range.
