Report Certification

I certify that to the best of my knowledge:

- Testing data and all corresponding information have been checked for accuracy and completeness.
- Sampling and analysis have been conducted in accordance with the approved protocol and applicable reference methods (as applicable).
- All deviations, method modifications, or sampling and analytical anomalies are summarized in the appropriate report narrative(s).

Anthony Sakellariou
Senior Project Manager

April 25, 2023
Date

TRC was operating in conformance with the requirements of ASTM D7036-04 during this test program.

Bruce Randall
TRC Emission Testing Technical Director

EMISSIONS INFORMATION COLLECTION TEST

1.0 INTRODUCTION

TRC Environmental Corporation (TRC) performed an emissions information collection test program to support Cokenergy's response to the U.S. Environmental Protection Agency (EPA) Clean Air Act (CAA) section 114 request dated July 27, 2022. The test program was completed on the HRSG Main Stack at Cokenergy's Heat Recovery facility in East Chicago, Indiana on February 2 through 9, 2023. The Cokenergy facility is located adjacent to the non-recovery coke production facility operated by Indiana Harbor Coke company (IHCC). Cokenergy is not involved in the production of coke; Cokenergy receives and recovers the waste heat generated by the IHCC coke ovens for energy recovery and cools the gas for environmental treatment. The tests were authorized by and performed for Cokenergy, LLC.

The purpose of this test program was to determine filterable particulate matter (PM), dioxin/furans, nitrogen oxides (NO_X), carbon monoxide (CO), sulfur dioxide (SO_2), hydrogen chloride (HCl), hydrogen fluoride (HF), hydrogen cyanide (HCN), formaldehyde (CH_2O), and speciated volatile organic hazards air pollutants (SVO HAPs) emission rates during specified operating conditions. The test program was conducted according to the TRC Test Protocol dated December 15, 2022.

Test Facility	Cokenergy, LLC 3210 Watling Street MC 2-991 East Chicago, Indiana 46312 Permit No. T089-43724-00383 Facility No. 089-00383	Mr. Luke E. Ford Director EH&S 219-397-4626 (phone) lford@primaryenergy.com
Air Emissions Testing Body (AETB)	TRC Environmental Corporation 207C Eisenhower Lane South Lombard, Illinois 60148	Mr. Anthony Sakellariou Senior Project Manager 312-533-2035 (phone) asakellariou@trccompanies.com

Rome Rothgeb, Ryan Novosel, Gregory Rock, David Wells, Gavin Lewis and Anthony Sakellariou of TRC conducted the testing. Documentation of the on-site ASTM D7036-04 Qualified Individual(s) (QI) can be located in the appendix to this report.

Mr. Jarod Fisher from the IDEM observed the testing on February 2, 2023.

1.2 Facility and Process Description

The Cokenergy facility is located in Cleveland-Cliffs (Cliffs) Indiana Harbor Works in East Chicago, Indiana. The Cokenergy facility is a first-of-a-kind combined heat and power system that uses the waste heat in the flue gas from the metallurgical coke facility to produce steam and power for the Cliffs Indiana Harbor steel mill. Cliffs' Indiana Harbor Works is a large-scale, integrated steel mill. Within the Indiana Harbor Works, SunCoke Energy owns and operates the Indiana Harbor Coke Company (IHCC) metallurgical coke plant, consisting of four batteries of 67 coke ovens each to produce coke for Cliffs' blast furnace. The coke ovens are non-recovery type, which combust the coke oven gas in the ovens as it is generated. The coke ovens exhaust the combusted hot flue gas, which must be cooled and environmentally treated, into a series of refractory-lined manifolds to collect the gas. Cokenergy's waste heat recovery steam generators (HRSGs), arranged four per oven battery, receive and recover heat from the coke oven exhaust gas, producing power-grade steam and cooling the gas in the process. The superheated steam is used to generate electricity in a GE industrial condensing/extraction steam turbine. With the steam and power generated in this process, Cokenergy supplies electricity as well as 300 psig process steam to the Cliffs Indiana Harbor Works. Cokenergy's Flue Gas Desulfurization (FGD) system then environmentally treats the cooled flue gas, after it passes through the HRSGs, to remove sulfur dioxide (SO_2) and particulate. Flue gas temperatures and flows, and corresponding steam flows, change depending on where a given coke battery is in its coking cycle.

The Cokenergy facility consists of:

- Sixteen (16) heat recovery steam generators (HRSGs), 4 per coke oven battery, which recover heat from the flue gas, and cool it for environmental treatment.
- Flue gas ductwork to manifold the flue gas from the HRSGs to the FGD system.
- Two (2) spray dryer absorber (SDA) vessels to allow mixing of the flue gas with sorbent to remove SO_2 from the flue gas.
- A thirty-two (32) compartment pulse jet, fabric filter baghouse to remove particulate from the flue gas.
- Two induced draft (ID) fans that are responsible for pulling draft through the entire flue gas system from the ovens to the ID fans.
- One GE extraction/condensing steam turbine generator (STG), rated at 95MW, that accepts the generated steam from the HRSGs, and ancillary equipment for operation of the STG, including a 6-cell cooling tower, boiler feedwater heater, and two deaerators.

2.0 SUMMARY OF RESULTS

The results of this test program are summarized in the tables below. Detailed individual run results are presented in Section 6.0.

Unit ID	Pollutant Tested		Measured Emissions
HRSG Main Stack	Filterable PM	mg/dscm	0.81
		mg/dscm at 7% O_2	1.24
		lb/hr	2.31
	HAP Metals	mg/dscm	0.011
		mg/dscm at 7% O_2	0.018
		lb/hr	0.033
	NO_X	mg/dscm	70.79
		mg/dscm at 7% O_2	109.63
		lb/hr	205.28
	CO	mg/dscm	2.13
		mg/dscm at 7% O_2	3.30
		lb/hr	6.16
	CEMS SO_2	mg/dscm	524.09
		mg/dscm at 7% O_2	801.14
		lb/hr	1,517.0
	COMS Opacity	Maximum 6-min Average %	3.4
	SVO HAPs, as Benzene, Ethyl Benzene, Toluene, Xylene (BTEX)	mg/dscm	0.4
		mg/dscm at 7% O_2	0.5
		lb/hr	1.2

Unit ID	Pollutant Tested		Measured Emissions
HRSG Main Stack	Formaldehyde	µg/dscm	202.17
		µg/dscm at 7% O_2	318.13
		lb/hr	0.57
	HCl	µg/dscm	18675.21
		µg/dscm at 7% O_2	30169.13
		lb/hr	53.36
	HF	µg/dscm	177.04
		µg/dscm at 7% O_2	278.44
		lb/hr	0.50
	HCN	µg/dscm	335.45
		µg/dscm at 7% O_2	525.86
		lb/hr	0.95
	Dioxin/furans	µg/dscm	3.40E-5
		µg/dscm at 7% O_2	5.14E-5
		lb/hr	9.75E-8
	Semi-volatile Organic HAP Compounds (Semi-vol), including Polycyclic Aromatic Hydrocarbons (PAHs)	µg/dscm	0.73
		µg/dscm at 7% O_2	0.98
		lb/hr	2.11E-3

Unit ID	Pollutant Tested		Measured Emissions
Downstream of HRSGs	Benzene	µg/dscm	573.67
	Toluene	µg/dscm	957.17
	Ethylbenzene	µg/dscm	891.02
	m,p-Xylene	µg/dscm	456.06
	o-Xylene	µg/dscm	456.04
	Mercury *	g/m^3	---

* Due to the amount of moisture in the flue gas the sorbent tubes were saturated and results were above quantifiable levels.

The table below summarizes the test methods used, as well as the number and duration of the test location:

Unit ID/ Sample Location	Parameter Measured	Test Method(s)	No. of Runs	Run Duration
HRSG Main Stack	Volumetric Flowrate Filterable PM, Total Metals	USEPA 1, 2, 4, 5, 29	7	240 mins
	Volumetric Flowrate Dioxin/Furans	USEPA 1, 2, OTM-46	7	240 mins
	SVO HAPs	USEPA 18	7	60 mins
	HCl, HF, HCN, CH_2O	USEPA 320	7	60 mins
	NO_X, CO	USEPA 7E, 10	3	60 mins
	Carbon dioxide (CO_2), Oxygen (O_2)	USEPA 3A	7	240 mins

Unit ID/ Sample Location	Parameter Measured	Test Method(s)	No. of Runs	Run Duration
Downstream of HRSGs	Mercury	ASTM D5954-98	3	240 mins
	BTEX	GPA STD 2286	3	Grab

3.0 DISCUSSION OF RESULTS

There were issues with the mercury samples collected downstream of the HRSGs. Due to the amount of moisture in the flue gas the sorbent tubes were saturated and results were above quantifiable levels. The testing was completed over the period of February 2 through 9, 2023. All sixteen (16) HRSGs were on-line during the testing on February 2, 8 and 9. HRSG C2 was forced off-line with a tube leak at 1:30 AM on February 3. Repairs were completed and the HRSG was returned to service at 8:30 PM on February 7. The pollution control equipment was in normal operation throughout the testing period and Cokenergy personnel are unaware of any coke production issues by the IHCC during the testing.

Method 5 runs 1, 2 and 3 gravimetric analyses were performed in the TRC Burr Ridge, IL laboratory. Method 5 runs 4 through 7 gravimetric analyses were performed by Enthalpy Analytical, LLC and their sample catch weights were adjusted using the corresponding reagent blank correction values. For measured filter weights that were negative due to filter material collected in the acetone rinse, a method detection limit of half a milligram was used for that fraction and for subsequent calculations.

No problems were encountered with the testing equipment during the test program. No changes or problems were encountered that required modification of any procedures presented in the test plan. No adverse test or environmental conditions were encountered during the conduct of this test program. Unit operating data was recorded by plant personnel and appended to the report.

4.0 SAMPLING AND ANALYSIS PROCEDURES

All testing, sampling, analytical, and calibration procedures used for this test program were performed in accordance with the methods presented in the following sections. Where applicable, the Quality Assurance Handbook for Air Pollution Measurement Systems, Volume III, Stationary Source Specific Methods, USEPA 600/R-94/038c, September 1994 was used to supplement procedures.

4.1 Determination of Sample Point Locations by USEPA Method 1

This method is applicable to gas streams flowing in ducts, stacks, and flues and is designed to provide guidance for the selection of sampling ports and traverse points at which sampling for air pollutants will be performed. Sample ports must be located at least two duct diameters downstream and a half a duct diameter upstream from any flow disturbance.

The cross-section of the measurement site was divided into a number of equal areas, and the traverse points were located in the center of each area. The minimum number of points were determined from Figure 1-1 (particulate) of the Method.

4.2 Volumetric Flow Rate Determination by USEPA Method 2

This method is applicable for the determination of the average velocity and the volumetric flow rate of a gas stream.

The gas velocity head (ΔP) and temperature were measured at traverse points defined by USEPA Method 1. The velocity head was measured with a Type S (Stausscheibe or reverse type) pitot tube and oil-filled manometer; and the gas temperature was measured with a

Type K thermocouple. The average gas velocity in the flue was calculated based on: the gas density (as determined by USEPA Methods 3A and 4); the flue gas pressure; the average of the square roots of the velocity heads at each traverse point, and the average flue gas temperature.

4.3 Determination of the Concentration of Gaseous Pollutants Using a Multi-Pollutant Sampling System

Concentrations of the pollutants in the following sub-sections were determined using one sampling system.

A straight-extractive sampling system was used. A data logger continuously recorded pollutant concentrations and generated one-minute averages of those concentrations. All calibrations and system checks were conducted using USEPA Protocol gases. Three-point linearity checks were performed prior to sampling, and in the event of a failing system bias or drift test (and subsequent corrective action). System bias and drift checks were performed using the low-level gas and either the high- or mid-level gas (as specified in the appendices) prior to and following each test run.

The Low Concentration Analyzers (those that routinely operate with a calibration span of less than 20 ppm) used by TRC are ambient-level analyzers. Per Section 3.12 of Method 7E, a Manufacturer's Stability Test is not required for ambient-level analyzers. Analyzer interference tests were conducted in accordance with the regulations in effect at the time that TRC placed an analyzer model in service.

4.3.1 CO_2 Determination by USEPA Method 3A

This method is applicable for the determination of CO_2 concentrations in controlled and uncontrolled emissions from stationary sources only when specified within the regulations. The CO_2 analyzer was equipped with a non-dispersive infrared (IR) detector.

4.3.2 O_2 Determination by USEPA Method 3A

This method is applicable for the determination of O_2 concentrations in controlled and uncontrolled emissions from stationary sources only when specified within the regulations. The O_2 analyzer was equipped with a paramagnetic-based detector.

4.3.3 NO_x Determination by USEPA Method 7E

This method is applicable for the determination of NO_x concentrations in controlled and uncontrolled emissions from stationary sources only when specified within the regulations. The NO_x analyzer utilized a photomultiplier tube to measure the linear and proportional luminescence caused by the reaction of nitric oxide and ozone.

4.3.4 CO Determination by USEPA Method 10

This method is applicable for the determination of CO concentrations in controlled and uncontrolled emissions from stationary sources only when specified within the regulations. The non-dispersive infrared analyzer (NDIR) CO analyzer was equipped with an internal gas correlation filter wheel, which eliminates potential detector interference. As such, use of an interference removal trap was not required.

4.4 Filterable PM Determination by USEPA Method 5

This method is applicable for the determination of PM emissions from stationary sources. USEPA Methods 2-4 were performed concurrently with, and as an integral part of, these determinations.

Flue gas was withdrawn isokinetically from the source at traverse points determined per USEPA Method 1, and PM was collected in the nozzle, probe liner, and on a glass fiber filter. The probe liner and filter were maintained at a temperature of 120$\pm$14°C (248 + 25°F). The PM mass, which included any material that condensed at or above the filtration temperature, was determined gravimetrically after the removal of uncombined water.

4.5 Gaseous Organic Compound Determination by USEPA Method 18

This method is designed to measure gaseous organics emitted from an industrial source. This method will not determine compounds that (1) are polymeric (high molecular weight), (2) can polymerize before analysis, or (3) have very low vapor pressures at stack or instrument conditions.

An integrated sample of flue gas was collected on sorbent traps. The major organic components of the sample were separated by gas chromatography (GC) and individually quantified by flame ionization.

4.6 Trace Metals Determination by USEPA Method 29

This method is applicable for the determination of metals emissions from stationary sources. This method may be used to determine particulate emissions in addition to the metals emissions if the prescribed procedures and precautions are followed. USEPA Methods 2-4 were performed concurrently with, and as an integral part of these determinations.

Flue gas was withdrawn isokinetically from the source at traverse points determined per USEPA Method 1 through a nozzle, probe liner, glass fiber filter and a series of impingers. The probe liner and filter were maintained at a temperature of 120±14°C (248 + 25°F). Particle-bound metals were collected in the nozzle, probe on the filter. Gaseous metals were collected in a solution of nitric acid and hydrogen peroxide (analyzed for all metals including Hg) and a solution of acidified potassium permanganate (analyzed only for Hg).

The recovered samples were analyzed using the techniques identified in the appended analytical report.

4.7 Determination of Polychlorinated Dibenzo-p-Dioxins, Polychlorinated Dibenzofurans, Polychlorinated Biphenyls, and Polycyclic Aromatic Hydrocarbons by USEPA OTM 46

This method is applicable to the determination of emissions of Polychlorinated Dibenzo-p-Dioxins (PCDDs), Polychlorinated Dibenzofurans (PCDFs), Polychlorinated Biphenyls (PCB), and/or Polycyclic Aromatic Hydrocarbons (PAH) from stationary sources. USEPA Methods 2-4 were performed concurrently with, and as an integral part of these determinations.

A sample was withdrawn isokinetically from the gas stream. PCDD, PCDF, PCB and PAH compounds were collected in the sample probe, on a glass fiber filter, and on a packed column of adsorbent material. The PCDD, PCDF, PCB and PAH compounds were extracted from the sample, separated by high-resolution gas chromatography (HRCG), and measured by high-resolution mass spectrometry (HRMS). This method uses isotopically labeled standards to improve method accuracy and precision through isotope dilution quantitation.

4.8 Mercury Determination in Natural Gas by ASTM D5954-98

This method is applicable to the determination of mercury in natural gas streams at concentrations down to 1 ng/m^3. Adsorption of the mercury on gold-coated beads can remove interferences associated with the direct measurement of mercury in natural gas. It preconcentrates the mercury before analysis thereby offering measurement of ultra-low average concentrations in a natural gas stream over a long span of time. The procedure detects both inorganic and organic forms of mercury.

4.9 Extended Analysis of Natural Gas by GPA STD 2286 (2014)

This method is intended for the compositional analysis of natural gas and similar gaseous mixtures where precise physical property data of the hexanes and heavier fractions are required. The procedure is applicable for mixtures which may contain components of nitrogen, carbon dioxide, and/or hydrocarbon compounds C1-C14.

4.10 Speciated Pollutant Determination by Extractive FTIR

The Method 320, 40CFR63, sampling and measurement system meets the requirements for stack sampling of gaseous organic and inorganic compounds set forth by the United States Environmental Protection Agency (USEPA). In particular, it meets the requirements of USEPA Reference Method 320, "Measurement Of Vapor Phase Organic And Inorganic Emissions By Extractive Fourier Transform Infrared (FTIR) Spectroscopy," 40CFR63. This method applies to the analysis of a range of volatile organic compounds (VOCs) and volatile inorganic compounds emitted from an industrial source.

The source emissions were extracted from the single sampling point in the gas stream and then transported to the FTIR analyzer via a heated, extractive sampling system. The various components of the matrix were identified and quantified by absorbance of infrared radiation. All data measurements and analytical results were stored on the computer. The data was copied to CD, flash drive, or a second hard drive before departing the test site.

The FTIR spectrometer used was an MKS 2030 Analyzer outfitted with a liquid nitrogen cooled MCT (mercury cadmium telluride) detector and a heated low volume (200 mL) gas cell with a 5.11 meter pathlength. The spectral resolution was 0.5 cm^{-1} (wavenumbers). This FTIR instrument was calibrated using a spectral library of reference spectra stored on computer. Calibration was verified on site through direct and system calibration measurements using gas standards. These gases include the method-required CTS (calibration transfer standard, 10 ppm Ethylene) and a nitrogen zero gas. Direct, system and dynamic matrix spiking calibrations were conducted using a formaldehyde, HCl, HF and HCN gas standards.

The validation requirements in EPA Method 320 (sections 3.25, and 13.0 through 13.4) were performed for HCl and HF.

5.0 QUALITY ASSURANCE PROCEDURES

TRC integrates our Quality Management System (QMS) into every aspect of our testing service. We follow the procedures specified in current published versions of the test Method(s) referenced in this report. Any modifications or deviations are specifically identified in the body of the report. We routinely participate in independent, third party audits of our activities, and maintain:

- Accreditation from the Louisiana Environmental Laboratory Accreditation Program (LELAP);
- Accreditation from the Stack Testing Accreditation Council (STAC) and the American Association for Laboratory Accreditation (A2LA) that our operations conform with the requirements of ASTM D 7036 as an Air Emission Testing Body (AETB).

These accreditations demonstrate that our systems for training, equipment maintenance and calibration, document control and project management will fully ensure that project objectives are achieved in a timely and efficient manner with a strict commitment to quality.

All calibrations are performed in accordance with the test Method(s) identified in this report. If a Method allows for more than one calibration approach, or if approved alternatives are available, the calibration documentation in the appendices specifies which approach was used. All measurement devices are calibrated or verified at set intervals against standards traceable to the National Institute of Standards and Technology (NIST). NIST traceability information is available upon request.

ASTM D7036-04 specifies that: *"AETBs shall have and shall apply procedures for estimating the uncertainty of measurement. Conformance with this section may be demonstrated by the use of approved test protocols for all tests. When such protocols are used, reference shall be made to published literature, when available, where estimates of uncertainty for test methods may be found."* TRC conforms with this section by using approved test protocols for all tests.

1 - The mass at least one of the sample fractions was below the analytical detection limit
2 - The mass in all of the sample fractions was below the analytical detection limit

ADL - all analytical values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

DLL - at least one, but not all values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

BDL - all analytical values used to calculate and report an in-stack emissions value are less than the laboratory's reported detection level(s)

English Units: Standard conditions of 29.92 inHg and 68º F
Metric Units: Standard conditions of 760 mmHg and 20º C

[1] -Sample fractions were below the detection limit, results calculated based upon: the detection limit

ADL - all analytical values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

DLL - at least one, but not all values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

BDL - all analytical values used to calculate and report an in-stack emissions value are less than the laboratory's reported detection level(s)

English Units: Standard conditions of 29.92 inHg and 68º F
Metric Units: Standard conditions of 760 mmHg and 20º C

1 -One or more of the sample fractions were below the detection limit

ADL - all analytical values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

DLL - at least one, but not all values used to calculate and report an in-stack emissions value are greater than the laboratory's reported detection level(s)

BDL - all analytical values used to calculate and report an in-stack emissions value are less than the laboratory's reported detection level(s)

English Units: Standard conditions of 29.92 inHg and 68º F
Metric Units: Standard conditions of 760 mmHg and 20º C

This is to Certify that:

Anthony Sakellariou

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 2H, 3, 3B, 4, 5, 5A, 5B, 5D, 5E, 5F, 5i, 17, 19, 201A, and 202.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-29-2024

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 11-01-2019

Certificate Number: 01527

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Anthony Sakellariou

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 3A, 6C, 7E, 10, 10B, 19, 20, 25A.

CEM Performance Specifications PS2, PS3, PS4, PS4A, PS5, PS6, PS7, PS8, and PS15

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-31-2024

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 11-01-2019

Certificate Number: 01529

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Anthony Sakellariou

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 2, 3, 4, 12, 19, 29, 30B, 101, 101A, 102, and ASTM D6784-02.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-30-2024

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 11-01-2019

Certificate Number: 01530

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Anthony Sakellariou

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Method 318

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed an internal comprehensive examination for the test methods designated above.

This certification is effective until:

08-17-2025

Date of Issue: 08-18-2020

Certificate Number: 01587

Edward MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Anthony Sakellariou

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test method(s):

EPA Methods 320 and 321

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed an internal comprehensive examination for the test methods designated above.

This certification is effective until:

09-28-2027

Date of Issue: 09-28-2022

Certificate Number: 01880

Edward MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gavin Lewis

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 2H, 3, 3B, 4, 5, 5A, 5B, 5D, 5E, 5F, 5i, 17, 19, 201A, and 202.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 01-05-2028

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 01-09-2023

Certificate Number: 01903

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gavin Lewis

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 3A, 6C, 7E, 10, 10B, 19, 20, 25A.

CEM Performance Specifications PS2, PS3, PS4, PS4A, PS5, PS6, PS7, PS8, and PS15

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 01-05-2028

Date of Issue: 01-09-2023

Certificate Number: 01904

Edward J MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gavin Lewis

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 2, 3, 4, 12, 19, 29, 30B, 101, 101A, 102, and ASTM D6784-02.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 01-05-2028

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 01-09-2023

Certificate Number: 01905

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

David Wells

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 2H, 3, 3B, 4, 5, 5A, 5B, 5D, 5E, 5F, 5i, 17, 19, 201A, and 202.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-11-2027

Date of Issue: 11-14-2022

Certificate Number: 01897

Edward J MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

David Wells

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 3A, 6C, 7E, 10, 10B, 19, 20, 25A.

CEM Performance Specifications PS2, PS3, PS4, PS4A, PS5, PS6, PS7, PS8, and PS15

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-12-2027

Edward J MacKinnon
Air Measurements Practice Quality Manager

Date of Issue: 11-14-2022

Certificate Number: 01898

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gregory Rock

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 1A, 2, 2A, 2C, 2D, 2F, 2G, 2H, 3, 3B, 4, 5, 5A, 5B, 5D, 5E, 5F, 5i, 17, 19, 201A, and 202.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 10-13-2027

Date of Issue: 11-14-2022

Certificate Number: 01896

Edward J MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gregory Rock

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 3A, 6C, 7E, 10, 10B, 19, 20, 25A.

CEM Performance Specifications PS2, PS3, PS4, PS4A, PS5, PS6, PS7, PS8, and PS15

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 08-08-2023

Date of Issue: 08-09-2018

Certificate Number: 01390

Edward J MacKinnon
Air Measurements Practice Quality Manager

This certificate is the exclusive property of TRC and is non-transferable.

This is to Certify that:

Gregory Rock

Is a Qualified Individual as defined in Section 8.3 of ASTM D7036-04 for the following test methods:

EPA Methods 1, 2, 3, 4, 12, 19, 29, 30B, 101, 101A, 102, and ASTM D6784-02.

The individual has met the minimum experience requirements defined in Section 8.3.4.2 of ASTM D7036-04 and has successfully passed a comprehensive examination for the test methods designated above.

This certification is effective until: 01-21-2026

Date of Issue: 01-22-2021

Certificate Number: 01642

Edward J MacKinnon
Air Measurements Practice Quality Manager

TRC

This certificate is the exclusive property of TRC and is non-transferable.

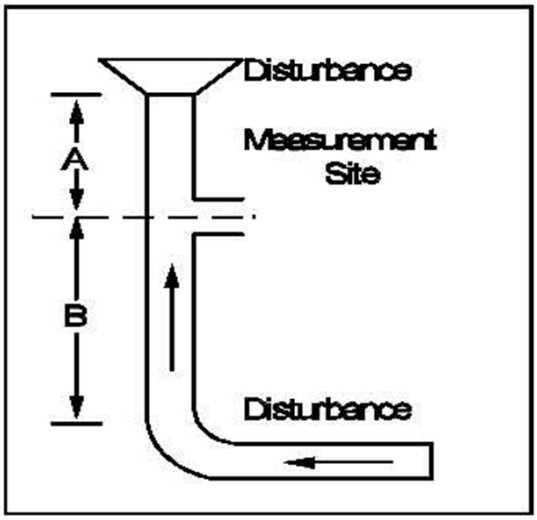
Sample Location Information for Isokinetic Sampling - Round Ducts

Project #: 508369
Company: Primary Energy
Plant: Cokenergy Facility
Unit ID: HRSG
Sample Location: Main Stack

Distance A: 73.80 Feet, 4.10 Duct diameters
Distance B: 201.00 Feet, 11.17 Duct diameters
Meets Method 1 criteria

Duct Diameter: 216 inches 18.00 feet
# of Ports Used: 4
# of Points/Diameter: 6
Sample Plane: Horizontal
Port Type: Flange
Port Length: 7.0 inches
Port Inside Diameter: 6.0 inches



Traverse Point Locations

Point	% of diameter	Inches from wall	Inches from port edge
1	4.4	9.5	16.5
2	14.6	31.5	38.5
3	29.6	63.9	70.9

Pre-cyclonic flow check conducted? Yes

Laboratory Analysis Report

Case Narrative

General Information

TRC Client Office:	**Burr Ridge**
Company:	Primary Energy
Facility:	Cokenergy HRSG Stack
Project #:	508369
Analysis Date(s):	2/3-15/2023
Analyst:	Gayle Swanson

Analysis

Analytes:	Particulate Matter
Analytical Protocols:	EPA Method 5
TRC SOP:	AM-P60-5, AM-P60L-5

Analytical Notes: No problems were encountered during the analyses.

QA/QC Review: All of the data have been reviewed for quality assurance. All of the quality control and sample specific information in this package is complete and meets or exceeds the minimum requirements for acceptability.

Comments: All samples arrived at the laboratory in a condition acceptable for analysis.

If you have any questions or concerns regarding this analysis, please feel free to contact me.

Laboratory Certification Statements

I certify that to the best of my knowledge:

- Test data and all corresponding information have been checked for accuracy and completeness.
- Analyses have been conducted in accordance with approved protocol and reference methods (as applicable).
- All deviations, method modifications, or analytical anomalies are summarized in the appropriate report narrative(s).
- Analysis results only represent that of the samples as received into the laboratory.
- This document contains a total of 4 pages.

This test report shall not be reproduced except in full, without the written approval of the laboratory.

Sample Receipt Checklist

TRC Client Office: Burr Ridge **Date:** 2/3/2023

Project #: 508369 **Time:** 2:00

 # Samples: 3 **Recipient:** Gs

	Yes or **N**o
Container Seals Inspected	
Present?	Y
If present, are seals intact?	Y
Chain-of-Custody Form Inspected	
COC present with samples?	Y
Name of individual who collected samples on COC?	Y
Date of sample collection on COC?	Y
COC indicates analytical methodology to be used for each sample?	Y
Has form been signed - Relinquished By?	Y
Have date and time custody released been noted on form?	Y
Are you signing COC - Received By?	Y
Have date and time custody received noted on form?	Y
All Sample Containers Inspected	
Does number of samples match number on COC form?	Y
Do all sample IDs on sample labels match those on the COC form?	Y
Are the sample containers intact?	Y
No signs of leakage?	Y
No visible damage to sample containers?	Y

Sample Temperature Upon Receipt 70 °F

Notes and/or Explanations for any "No" above:

Signed (Recipient): Gaz Sua

I certify that to the best of my knowledge all analytical data presented in this report:

- Have been checked for completeness
- Are accurate, error-free, and legible
- Have been conducted in accordance with approved protocol, and that all deviations and analytical problems are summarized in the appropriate narrative(s)

This analytical report was prepared in Portable Document Format (.PDF). This report shall not be reproduced except in full without approval of the laboratory. This will provide assurance that parts of a report are not taken out of context.

Narrative Summary

Enthalpy Analytical Narrative Summary

Company Job No. Client ID.	TRC Environmental Corporation – Burr Ridge 0123-099 EPA Method 18 (Adsorbents) 508369 Site: Primary Energy - Cokenergy

Custody	Conor Benson received the samples on 2/15/23 at 3.5°C after being relinquished by TRC Environmental Corporation – Burr Ridge. The samples were then transferred to Enthalpy Analytical's Durham, NC facility on 2/16/23. Alyssa Miller logged the samples in on 2/16/23 at 1.8°C in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, LLC.

Analysis	The samples were analyzed for benzene, ethylbenzene, toluene, o-xylene, m-xylene, and p-xylene using the analytical procedures in EPA Method 18, Measurement of Gaseous Organic Compound Emissions by Gas Chromatography (40 CFR Part 60, Appendix A). The standards and samples were analyzed following the procedures specified in section 8.2.4, Adsorption Tube Procedure. Each sample train consisted of one condensate, followed by two charcoal tubes. Prior to extraction, 7 mL was archived from each whole condensate fraction. The remaining condensate was then extracted with 5 mL of solvent and shaken. To account for the removed volume, an aliquot factor was applied to the extract condensate fractions. The Zefon charcoal (Cat #ZST-002) tubes were desorbed in two fractions: the front half (FH) consisting of the whole first tube combined with the front half of the second tube in series and the back half (BH) consisting of the back half of the second tube. All fractions were desorbed using 5 mL of a solvent and shaken. The tubes were desorbed on 2/20/23. The Gas Chromatograph "Lucy" was equipped with a Flame Ionization Detector for these analyses.

Calibration	The calibration curves are located in the back of this report. For each calibration curve used, the first page of the curve contains all method specific parameters (i.e., curve type, origin, weight, etc.) used to quantify the samples. The calibration curve section also includes a table with the Retention Time (RetTime), Level (Lvl), Amount (corresponding units), Area, Response Factor (Amt/Area) and the analyte Name. The calibration table is used to identify (by retention time) and quantify each target compound.

Enthalpy Analytical Narrative Summary

Company Job No. Client ID.	TRC Environmental Corporation – Burr Ridge 0123-099 EPA Method 18 (Adsorbents) 508369 Site: Primary Energy - Cokenergy

Chrom. Conditions	The acquisition methods (LUCY0301.M, LUCY0301B.M) may be made available upon request.

QC Notes	None of the compounds of interest were identified at levels greater than their MDL in the analyses of the laboratory blanks. A Laboratory Duplicate (LD) was analyzed using aliquots of samples ***HRSG Stack M18 Run 1 Spike (EXT*** and ***FH)***. The original and duplicate analyses differed by no more than 2.5%. As required by section 8.4.3, Recovery Study for Adsorption Tube Sampling, a recovery study was performed for the compounds of interest during the field test. The laboratory prepared 12 charcoal tube spikes containing 52.7 µg of benzene, 52.0 µg of ethylbenzene, 51.9 µg of toluene, 54.5 µg of styrene, 52.0 µg of naphthalene, 52.5 µg of o-xylene, 51.8 µg of m-xylene, and 51.6 µg of p-xylene. Ten of the spikes were provided to the client prior to sample collection while two were retained by the lab to be used as a Laboratory Control Samples (LCS). The train collection efficiencies (R) were calculated using equations 18-7, 18-8, and 18-9 in EPA Method 18. The reported results have been adjusted using these recovery efficiency values, which all met the method-required limits of 70% to 130%. One of the retained LCS tubes was desorbed and analyzed with the samples and yielded percent recovery values between 92.1% and 99.2%. An aqueous LCS was also prepared and analyzed with the samples and yielded percent recovery values between 89.6% and 93.0%.

Reporting Notes	The MDL was determined by performing an IDL study and performing calculations as described in Title 40 of the Code of Federal Regulations, Part 136, Appendix B, Revision 1.1. The study is included in the raw data section. These analyses met the requirements of the TNI Standard. Any deviations from the requirements of the reference method or TNI Standard have been stated above. The results presented in this report are representative of the sample as provided to the laboratory.

Enthalpy Analytical Narrative Summary

Company	TRC Environmental Corporation – Burr Ridge		**Client #**	508369 Site: Primary Energy – Cokenergy
Analyst	CCB		**Job #**	0123-099
Parameters	EPA Method 5		**# Samples**	4 Runs + 2 Filters + Blank

Custody	Conor Benson picked up the samples on 2/15/23 after being relinquished by TRC Environmental Corporation – Burr Ridge. He then dropped off the samples at Enthalpy Durham's laboratory on 2/16/23. Alyssa Miller logged the samples in on 2/17/23 at 1.8 ºC in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, LLC.
Analysis	The samples were analyzed for Particulate Matter using the analytical procedures in EPA Method 5, Determination of Particulate Matter Emissions from Stationary Sources. The filter fractions were weighed on Balance 2 (Mettler Toledo, Model AB265-S, Serial# 1125163272) and the rinse fractions were weighed on Balance 8 (Sartorius Model ME5-OCE, Serial # 23104965). Both balances are certified by Mettler Toledo through July 31, 2023.
QC Notes	The samples catch weights were adjusted using the corresponding reagent blank correction value. A mathematically determined (theoretical) maximum value was calculated and compared with the actual value measured for the reagent blank. The lower of the two values was used as the blank correction value, which was then factored by the sample volume divided by the reagent blank volume, and subtracted from the sample catch weight. The acetone blank was received and used as described. The laboratory also dried down an acetone blank with the samples. The results are reported but not used to adjust any of the data.
Reporting Notes	These gravimetric analyses are considered to be accurate to ±0.5 mg. Therefore, negative catch weights between 0 and –0.5 mg are set to zero and no investigation is undertaken. Negative catch weights less than -0.5 mg are investigated. Filter IDs ***615, 616, 617, and 618*** were below the investigation threshold. It was noted by the analyst that the filters were either frayed, received with loose pieces, or had pin holes in them. These analyses met the requirements of the TNI Standard. Any deviations from the requirements of the reference method or TNI Standard have been stated above. The results presented in this report are representative of the samples as provided to the laboratory.

Enthalpy Analytical Narrative Summary

Company Job No. Client ID.	TRC Environmental Corporation – Burr Ridge 0123-099 EPA Method 29 508369 Site: Primary Energy - Cokenergy

Custody	Conor Benson received the samples on 2/15/23 after being relinquished by TRC Environmental Corporation – Burr Ridge. He then delivered the samples to Enthalpy Analytical, LLC – Durham on 2/16/23. Alyssa Miller logged in the samples on 2/17/23 at 1.8 ºC in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, LLC.

Analysis	The samples were prepared and analyzed for antimony, arsenic, beryllium, cadmium, chromium, cobalt, lead, manganese, nickel, selenium and mercury using the procedures in EPA Method 29, Determination of Metals Emissions from Stationary Sources. The Inductively Coupled Plasma Mass Spectrometer “X” and the Cold Vapor Atomic Absorption Spectrometer “Walt Jr.” were used for these analyses.

Calibration	The calibration curves met all method-specified precision criteria.

QC Notes	The analytes of interest were not identified at concentrations greater than the reporting limit in the analyses of the laboratory blanks. The Laboratory Control Spikes were within the acceptance limits of 80% to 120%. The Matrix Spike recovery values were within the acceptance range of 75% to 125%. The required duplicate samples had a relative percent difference of 20% or less or were less than five times the limit of quantitation. All of the samples were analyzed at least in duplicate.

Reporting Notes	These analyses met the requirements of the TNI Standard. Any deviations from the requirements of the reference method or TNI Standard have been stated above. The results presented in this report are representative of the sample as provided to the laboratory.

General Reporting Notes

The following are general reporting notes that are applicable to all Enthalpy Analytical, LLC data reports, unless specifically noted otherwise.

- Any analysis which refers to the method as ***"Type"*** represents a planned deviation from the reference method. For instance a Hydrogen Sulfide assay from a Tedlar bag would be labeled as "EPA Method 16-Type" because Tedlar bags are not mentioned as one of the collection options in EPA Method 16.

- The acronym ***MDL*** represents the Minimum Detection Limit. Below this value the laboratory cannot determine the presence of the analyte of interest reliably.

- The acronym ***LOQ*** represents the Limit of Quantification. Below this value the laboratory cannot quantitate the analyte of interest within the criteria of the method.

- The acronym ***ND*** following a value indicates a non-detect or analytical result below the MDL.

- The letter ***J*** in the Qualifier or Flag column in the results indicates that the value is between the MDL and the LOQ. The laboratory can positively identify the analyte of interest as present, but the value should be considered an estimate.

- The letter ***E*** in the Qualifier or Flag column indicates an analytical result exceeding 100% of the highest calibration point. The associated value should be considered as an estimate.

- Sample results are presented 'as measured' for single injection methodologies, or an average value if multiple injections are made. If all injections are below the MDL, the sample is considered non-detect and the ND value is presented. If one, but not all, are below the MDL, the MDL value is used for any injections that are below the MDL. For example, if the MDL is 0.500 and LOQ is 1.00, and the instrument measures 0.355, 0.620, and 0.442 - the result reported is the average of 0.500, 0.620, and 0.500 - - - i.e. 0.540 with a J flag.

- When a spike recovery (Bag Spike, Collocated Spike Train, or liquid matrix spike) is being calculated, the native (unspiked) sample result is used in the calculations, as long as the value is above the MDL. If a sample is ND, then 0 is used as the native amount (not the MDL value).

- The acronym ***DF*** represents Dilution Factor. This number represents dilution of the sample during the preparation and/or analysis process. The analytical result taken from a laboratory instrument is multiplied by the DF to determine the final undiluted sample results.

- The addition of ***MS*** to the Sample ID represents a Matrix Spike. An aliquot of an actual sample is spiked with a known amount of analyte so that a percent recovery value can be determined. The MS analysis indicates what effect the sample matrix may have on the target analyte, i.e. whether or not anything in the sample matrix interferes with the analysis of the analyte(s).

General Reporting Notes
(continued)

- The addition of ***MSD*** to the Sample ID represents a Matrix Spike Duplicate. Prepared in the same manner as a MS, the use of duplicate matrix spikes allows further confirmation of laboratory quality by showing the consistency of results gained by performing the same steps multiple times.

- The addition of ***LD*** to the Sample ID represents a Laboratory Duplicate. The analyst prepares an additional aliquot of sample for testing and the results of the duplicate analysis are compared to the initial result. The result should have a difference value of within 10% of the initial result (if the results of the original analysis are greater than the LOQ).

- The addition of ***AD*** to the Sample ID represents an Alternate Dilution. The analyst prepares an additional aliquot at a different dilution factor (usually double the initial factor). This analysis helps confirm that no additional compound is present and coeluting or sharing absorbance with the analyte of interest, as they would have a different response/absorbance than the analyte of interest.

- The Sample ID ***LCS*** represents a Laboratory Control Sample. Clean matrix, similar to the client sample matrix, prepared and analyzed by the laboratory using the same reagents, spiking standards and procedures used for the client samples. The LCS is used to assess the control of the laboratory's analytical system. Whenever spikes are prepared for our client projects, two spikes are retained as LCSs. The LCSs are labeled with the associated project number and kept in-house at the appropriate temperature conditions. When the project samples are received for analysis, the LCSs are analyzed to confirm that the analyte could be recovered from the media, separate from the samples which were used on the project and which may have been affected by source matrix, sample collection, and/or sample transport.

- **Significant Figures**: Where the reported value is much greater than unity (1.00) in the units expressed, the number is rounded to a whole number of units, rather than to 3 significant figures. For example, a value of 10,456.45 ug catch is rounded to 10,456 ug. There are five significant digits displayed, but no confidence should be placed on more than two significant digits. In the case of small numbers, generally 3 significant figures are presented, but still only 2 should be used with confidence. Many neat materials are only certified to 3 digits, and as the mathematically correct final result is always 1 digit less than all its pre-cursors - 2 significant figures are what are most defensible.

- **Manual Integration**: The data systems used for processing will flag manually integrated peaks with an "M". There are several reasons a peak may be manually integrated. These reasons will be identified by the following two letter designations on sample chromatograms, if provided in the report. The peak was ***not integrated*** by the software **"NI"**, the peak was ***integrated incorrectly*** by the software **"II"** or the ***wrong peak*** was integrated by the software **"WP"**. These codes will accompany the analyst's manual integration stamp placed next to the compound name on the chromatogram.

Sample Custody

Job #s	Describe Work Documented on This Page
0123-099	M18: Tubes + Condensates

Date: 02-20-23 Prep Analyst: SLSZ Job Number: 0123-099

Client: Primary Energy - Cokenergy OAF Line#: 1

Analyte(s): Benzene, Ethylbenzene, Toluene, o-Xylene, m/p xylene

Media Type: Charcoal SKC#: 25T-002 Lot#: 161 Exp Date: 10-2026

Desorption Solvent: CS_2 Brand: Caledon (exp: 2-14-23) Lot#: 106846

Desorption Volume: 5 mL Pipette #: GC-108 (5-14-23)

Sampling train consists of: x1 Condensate; x2 Tubes

Prep Information for Tubes:

Sample Alignment Witness: SLSZ Confirms Client field spikes have Enthalpy spike label: Yes, SLSZ

Field Blanks & Field Spikes, LCS's and Media Blanks to be desorbed whole.

The sample tubes are to be desorbed as follows: MB + LCS: 25T-002, lot #161, exp: 10/2026

3-Fraction
Frac 1 = Condensate
Frac 2 = Tube 1 + FH Tube 2
Frac 3 = BH Tube 2

- R2-SPK-C2; C3 desorbed whole tube
- Downloaded ~1mL aliquots to AS vials w/ pasteur pipettes

CEW 2/21/23

LD = R1-SPK.FH

Tube LCS – Retained/Internal (circle one) Spike used: 0123-099 Tube Spike BTEXSN @ ~50µg Spikeprep1896 store < 4°C TLP 1/19/23 Exp 7/11/23

Internal LCS Prep Analyst: N/A Witness: N/A

1 Media Blank per batch of not more than 20 samples

*Shaken at 450 rev/min for 30 minutes.

*For optimum desorption efficiency, shake samples at 450 rpm for 30 min. (Silica Gel tubes should be allowed to set overnight and then shaken a 2nd time.)

CEW 2/21/23

Prep Information for Condensates:

- Took volumes using graduated cylinder
- Archived 7 mL of Sample to 12 mL w/
- Added 5mL CS_2(SAA) w/ gc-108 (5-14-23) and Shook for 1 min
- Downloaded ~1 mL aliquots to AS vials via pasteur pipettes
- MB = 30 mL DiH_2O + 5mL CS_2 (SAA)
- LD-R1-SPK.EXT

Aqueous LCS – Retained Internal (circle one) Spike used: 50 µL Primary Stock Sol'n (exp: 7-5-23) w/ Syringe lot# 631450 + 30 mL $Di\ H_2O$ (millipore) + 5 mL CS_2 (SAA)

Internal LCS Prep Analyst: SLSZ Witness: N/A

1 Media Blank per batch of not more than 20 samples

Observations / Notes:

Filters:

1. Confirm filter ID's on petri labels match actual ID's on filters (Initial/Date) CCB/02-20-23
2. Petri dishes opened and placed into desiccator(s) for at least 24 hours.
   a. desiccator ID Lambda Date/Time In: 02-22-23/12:30
3. Filters were weighed to constant weight.

● frayed edge
* received with loose filter pieces
□ received with pin-holes

CCB 02-20-23

Acetone
Brand: Fisher
Lot: 218250
Exp: 07-08-24

Rinse Fractions:

1. Rinse fractions were measured using 250 mL graduated cylinder(s).
2. Rinse fractions (which include the Lab Acetone and Client Acetone Blanks) were assigned to glass beakers, which were topped off until dry, in evaporator(s) (evaporator ID Evap.3).
3. Rinse fraction glass beakers were placed in desiccator(s) for more than 24 hours.
   a. desiccator ID Lambda Date/Time In: 02-22-23/12:30

CCB 02-20-23

Filter Tare Weights:

1. Filter Tare Weight Date/Time. Balance Verified (Initials)
   a. Initial Tare measured by N/A using balance ___ on ___ @ ___ N/A
   b. Final Tare measured by N/A using balance ___ on ___ @ ___ N/A
   c. Tare weights provided by Client Yes; filters also provided by client.

CCB 02-20-23

Final Weights:

1. Filter final weights dates:
   a. 1st Weights measured by CCB using balance 2 on 02/23/23 CCB
   b. 2nd Weights measured by CCB using balance 2 on 02/24/23 CCB
   c. 3rd Weights measured by N/A using balance ___ on ___ N/A
   d. 4th Weights measured by N/A using balance ___ on ___ N/A
2. Rinse final weights dates:
   a. 1st Weights measured by CCB using balance 2 on 02/23/23 CCB
   b. 2nd Weights measured by CCB using balance 2 on 02/24/23 CCB
   c. 3rd Weights measured by N/A using balance ___ on ___ N/A
   d. 4th Weights measured by N/A using balance ___ on ___ N/A

Reagent & Field Blank Composites

When possible: the FH Blank should consist of 100 mL of Container 3. The BH Blank should consist of 100 mL of Container 3 + 200 mL of Container 4. If not enough solution provided, treat as field sample by digesting entire containers w/o combining.

	Container 3 Total	Container 3 Digested	Container 4 Total	Container 4 Composite		Hg Aliquot Removed from BH Composite:		Container 4 Digested
0223-099.8	295	100	200	300	-	50	=	250
					-		=

Calibration Table

==========

Calib. Data Modified : 5/25/2022 2:18:24 PM

Rel. Reference Window : 0.000 %
Abs. Reference Window : 0.030 min
Rel. Non-ref. Window : 0.000 %
Abs. Non-ref. Window : 0.030 min
Uncalibrated Peaks : not reported
Partial Calibration : Yes, identified peaks are recalibrated
Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear
Origin : Connected
Weight : Quadratic (Amnt)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Signal 1: FID1 A,

Calibration Table

==========

Calib. Data Modified : Monday, November 01, 2021 10:31:41 AM

Rel. Reference Window : 0.000 %
Abs. Reference Window : 0.030 min
Rel. Non-ref. Window : 0.000 %
Abs. Non-ref. Window : 0.030 min
Uncalibrated Peaks : not reported
Partial Calibration : Yes, identified peaks are recalibrated
Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear
Origin : Connected
Weight : Quadratic (Amnt)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Signal 1: FID1 A,

Job #(s)	0522-167
Applicable Method(s)	M18
Matrix	Extracts, Tubes
Solvent	CS2

Seven (or more) replicates of a low concentration preparation are made. The worst injection(s) (farthest from the mean area) may be removed assuming an appropriate Outlier Test calculation shows the value(s) to be an outlier. At least seven injections must remain.

MDL = Stdev * Student's t-value

t-value =	3.143	N=7	Degrees of Freedom = 6
t-value =	2.998	N=8	Degrees of Freedom = 7
t-value =	2.896	N=9	Degrees of Freedom = 8
t-value =	2.821	N=10	Degrees of Freedom = 9

Previous MDL for BTEXSN expired. Since old MDL is locked to Lucy1068_F in SM, anew processing method was created (Lucy1153_F). Processing method is exactly the same but the new name will allow the new MDL to be assigned in SM. Use Lucy1153_F going forward. DDL 5-25-22

Injector (F,R,NA)	
Column	
Injector (F,R,NA)	
Column	
Job #(s)	
Applicable Method(s)	29, 6020
Matrix	
Solvent	

Seven (or more) replicates of a low concentration preparation are made. The worst injection(s) (farthest from the mean area) may be removed assuming an appropriate Outlier Test calculation shows the value(s) to be an outlier. At least seven injections must remain.

MDL = Stdev * Student's t-value

t-value =	3.143	N=7	Degrees of Freedom = 6
t-value =	2.998	N=8	Degrees of Freedom = 7
t-value =	2.896	N=9	Degrees of Freedom = 8
t-value =	2.821	N=10	Degrees of Freedom = 9

Applicable Method(s)	7470 & EPA Method 29 & EPA Method 101A
Matrix	
Solvent	

Seven (or more) replicates of a low concentration preparation are made. The worst injection(s) (farthest from the mean area) may be removed assuming an appropriate Outlier Test calculation shows the value(s) to be an outlier. At least seven injections must remain.

MDL = Stdev * Student's t-value

t-value =	3.143	N=7	Degrees of Freedom = 6
t-value =	2.998	N=8	Degrees of Freedom = 7
t-value =	2.896	N=9	Degrees of Freedom = 8

Narrative Summary

ENTHALPY
ANALYTICAL

Enthalpy Analytical Narrative Summary

Company	TRC Environmental Corporation – Burr Ridge
Job#	0123-704 OTM-46 (PCDD/PCDF+PAH)
Client Project	Primary Energy - 508369 Site: Cokenergy

Custody	Summer Banning of Enthalpy Analytical Wilmington received the samples (via courier) on February 20, 2023 in two coolers at 2.8°C and 3.6°C and three boxes at 15.6°C, 16.2°C, and 10.5°C. All samples were received in good condition. Prior to, during, and after analysis, the samples were stored in the laboratory with access only by authorized personnel of Enthalpy Analytical, LLC.
Analysis	The samples were analyzed by EPA OTM-46 for PCDD/PCDF and PAH compounds using Agilent Technologies Model# 6890 High-Resolution GC/ Waters High-Resolution Mass-Spectrometer (HRGC/HRMS "Gandalf"). Each sample consisted of 1 XAD trap, filter, 1 bottle of combined front half and back half rinses, and 1-2 bottle(s) of combined impinger contents and rinses. After sampling by the client, the laboratory spiked the samples with Extraction Standard (ES), then Soxhlet extracted with hexane followed by toluene. After solvent exchange, each extract was spiked with Alternate Standard (AS). The extracts were divided into four parts. One quarter was used for the modified PAH analysis, two quarters (1/2) were used for the PCDD/PCDF analysis, and one quarter was archived. Cleanup procedures were performed on the remaining quarter(s) of each extract for PAH and PCDD/PCDF analysis. Each final sample extract was transferred to an autosampler vial and spiked with Injection Standard (JS), prior to instrumentation.
Calibration	For OTM-46 analyses, initial calibration RSD acceptance criterion for all target analytes meets 20% or less. The RSD acceptance criterion for isotopically-labeled standards meets 35% or less. These criteria allow for the best compromise between calibrated concentration range and method error. The internal calibration verification (ICV) and continuing calibration (concal) met method criteria.
QC Notes	The HRMS system displayed mass resolving power of at least 10,000 during the analysis for PCDD/PCDF and 8,000 for PAH. The PAH Batch Control Spike (BCS) sample met method criteria. Except where noted below, the PCDD/PCDF BCS met method criteria. ES-OCDF fell above method control limits in BCS-14784-DF. This analyte was not detected in the samples; therefore, the data is reportable without adverse impact.

	Analyte(s) were detected in MB-14784-PAH above LOQ. With the exception of Naphthalene, which is ubiquitous, any of these analyte(s) detected in the samples with less than 10 times the amount detected in the method blank (MB) were notated with a B qualifier and may be biased high. Insufficient sample remained for re-extraction. Analyte(s) were detected in MB-14784-DF at less than LOQ with the exception of Naphthalene which is ubiquitous. Any of these analyte(s) detected in the samples with less than 10 times the amount detected in MB were notated with a B qualifier and are reported with no adverse impact. GC Resolution parameters were met for PAH analyses. GC resolution parameters were met for TCDD and slightly elevated for TCDF. 2378-TCDF met method recovery criteria in the BCS and was not-detected in the MB. 2378-TCDF was detected above LOQ in sample HRSG-STACK-OTM46-2 and is reported without adverse impact. The samples were extracted within the 30-day from collection holding time and analyzed within the 40-day from extraction to analysis holding time required by the method.
Reporting Notes	ES was not detected in the initial analysis of the PCDD/PCDF extract for sample HRSG-STACK-OTM46-5 and confirmed upon reinjection. After completing the PAH analysis, the extract for this sample was solvent exchanged and analyzed for PCDD/PCDF successfully. An aliquot of each sample extract was treated to a dilution factor of ten and analyzed for PAH levels. Results indicated that samples should be analyzed without dilution. These results are provided in the report. An analyte concentration that exceeds the instrument's calibration range is flagged with an "E" in the "Qualifiers" column on the sample the report pages. This condition does not imply additional measurement uncertainty. The PCDD/PCDF TEQ was calculated and reported using I-TEF and WHO-2005 TEF, calculated by multiplying the concentration for each 2,3,7,8-substituted PCDD/F by its toxic equivalency factor (TEF). The Totals and Detection Limits have been included in the report. The TEQ is reported with and without EMPCs included. Additionally, the TEQ may be reported with non-detects treated as having a concentration of zero, a concentration of one-half the EDL, and/or a concentration equal to the EDL. Due to unavailability of some isotopically labeled standards specified in OTM-46 for PCDD/PCDF, certain individual labeled standards used were different than those specified in the method. However, the same categories of standards as presented in the method were represented.

The PCDD/PCDF analysis uses a DB-5MS or DB-Dioxin column to provide sufficient separation of the 2,3,7,8-tetrachlorinated dioxins and furans allowing for reliable and accurate results, indistinguishable from those obtained using a confirmation column. Confirmatory analysis is not performed. This approach is consistent with that in EPA methods 1613B and 8290A.

PCDD/F extracts are stored at room temperature rather than under refrigerated or freezing conditions because they are created and stored in tetradecane. In tetradecane, PCDD/F extracts are viable for years because they undergo almost no evaporation, and PCDD/Fs do not undergo any chemical degradation in this solvent.

GENERAL: Some labeled standards in the samples fell outside the limits for ES recoveries, notated with a V or Q qualifier. Because the target analytes are quantified based on their ratio to the labeled standards and undergo the same losses as the labeled standards, low or high recoveries do not cause any change to those ratios or result in any additional error in the measurement of the target analytes. Therefore, the data are considered acceptable.

The results for all field, trip, proof, and method blanks will be reported to allow assessment of non-detect results and positive results comparable to those in blanks and may represent positive results created by contamination. We will not report the EDL as the highest of these results, due to limitations in our LIMS systems.

A laboratory method blank is analyzed once in a sequence, rather than every 12 hours. However, a solvent blank is analyzed at least once every 12 hours to monitor for instrument carryover as distinguished from contamination introduced during sample preparation.

The results presented in this report are representative of the samples as provided to the laboratory.

Enthalpy Analytical, LLC in Wilmington NC is unaccredited for OTM-46. However, Enthalpy is accredited by the Louisiana Department of Environmental Quality to the 2009 TNI Standard under certificate number 05075 for M23.

General Reporting Notes – Data Qualifiers

The following are general reporting notes that are applicable to all Enthalpy Analytical, LLC - Wilmington, NC data reports, unless specifically noted otherwise.

General Data Qualifiers

- B – The analyte was found in the method blank, at a concentration that was at least 10% of the amount in the sample.
- Cxx – Two or more congeners co-elute. In EDDs, C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group ('xx') are shown with the number of the lowest IUPAC co-eluter.
- E – The reported concentration exceeds the calibration range (upper point of the calibration curve). For HRMS data, this condition does not imply additional measurement uncertainty. For LC-MS/MS data, these values should be considered as having measurement uncertainty higher than values within the calibration range.
- EDL – Estimated Detection Level: The EDL is unique to isotope dilution methods and reflects the conditions of analysis at the time of analysis, including the equipment used. Where the MDL is a static value, the EDL is a dynamic value.
- EMPC – Estimated Maximum Possible Concentration: EMPC is specific to Dioxin/Furan tests to indicate the determined ion-abundance ratio was outside the allowed theoretical range (usually due to being near the detection limit, although it can very rarely be caused by a co-eluting interference). The EMPC concentration is adjusted to reflect the value at the theoretical ion-abundance ratio.
- IR – The ion ratio between the primary and secondary ions was observed to be outside the method criteria. The analyte concentration may be inaccurate due to interference.
- J – The analyte has a concentration below the minimum calibration level (LOQ value) but greater than the LOD. These values should be considered as having measurement uncertainty higher than values within the calibration range
- L - Indicates that an analyte has a concentration below the Minimum Detection Limit (MDL). The reported concentration is not recommended for regulatory use as the analyte signal may have a signal-to-noise ratio less than the criteria deemed necessary to be considered a detected analyte.
- LOD – Limit of Detection: For reports conforming to the DOD ELAP QSM, this is the QSM-defined LOD. For reports conforming to TNI requirements (but not DOD ELAP QSM requirements), this value is the minimum detection limit (MDL). The LOD is adjusted for sample weight or volume.
- LOQ – Limit of Quantitation: For reports conforming to the DOD ELAP QSM, this is the QSM-defined LOQ. For reports conforming to TNI requirements (but not DOD ELAP QSM requirements), this value is the reporting limit (RL). The LOQ is adjusted for sample weight or volume.

- <LOD() – Analyte was not found at a concentration high enough to be reported as detected. It is reported as less than the LOD, and the LOD is given in the parentheses.
- <LOQ() – Analyte was not found at a concentration high enough to be reported as above the QSM-defined LOQ or TNI defined Reporting Limit. It is reported as less than the LOQ, and the LOQ is given in the parentheses.
- ND – Indicates a non-detect.
- NR – Indicates a value that is not reportable due to issues observed in sample preparation or analysis.
- PR – The associated congener(s) is(are) poorly resolved.
- QI – Indicates the presence of a quantitative interference.
- RL – Reporting Limit. Lowest reportable value. The level is higher than the MDL.
- SI – Denotes "Single Ion Mode" and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates.
- U – The analyte was not detected.
- V / Q – The labeled standard recovery is not within method control limits.
- X – Indicates the result is from re-injection/repeat/second-column analysis.

Lab Identifiers/ Data Attributes

- AR – Indicates use of the archived portion of the sample extract.
- CU – Indicates a sample that required additional clean-up prior to HRMS injection/processing.
- D – Dilution Data. Result was obtained from the analysis of a dilution. The number that follows the "D" indicates the dilution factor.
- DE – Indicates a dilution performed with the addition of ES (Extraction Standard) solution.
- DUP – Designation for a duplicate sample.
- MS – Designation for a matrix spike.
- MSD – Designation for a matrix spike duplicate.
- R – Indicates a re-extraction of the sample.
- RJ – Indicates a reinjection of the sample extract.

- S – Indicates a sample split. The number that follows the "S" indicates the split factor.
- SAT – Indicates an analyte saturated the detector.
