

22.9(455B) Special requirements for visibility protection.

22.9(1) *Best available retrofit technology (BART) applicability.* Sources shall comply with the provisions of subrule 22.9(2) if the sources fall within numbers 1 through 26 of the "stationary source categories" of air pollutants listed in rule 22.100(455B) and if they meet the following criteria:

a. Any emission unit startup began after August 7, 1962; and

b. Construction of the emission unit commenced on or before August 7, 1977; and

c. The sum of the potential to emit, as "potential to emit" is defined in 567-20.2(455B), from emission units identified above is equal to or greater than 250 tons per year or more of one of the following pollutants: nitrogen oxides, sulfur dioxide, particulate matter (PM10), or volatile organic compounds.

22.9(2) *Duty to self-identify.* The owner or operator or designated representative of a facility meeting the conditions of subrule 22.9(1) shall submit two copies of a completed BART Eligibility Certification Form #542-8125. The BART Eligibility Certification Form #542-8125 shall include all information necessary for the department to complete eligibility determinations. The information submitted shall include source identification, description of processes, potential emissions, emission unit and emission point characteristics, date construction commenced and date of startup, and other information required by the department. The completed form shall be submitted to the Air Quality Bureau, Department of Natural Resources, 7900 Hickman Road, Suite 1, Urbandale, Iowa 50322, by September 1, 2005.
