

products, pre-construction termiticide applications, and spray drift language for agricultural products; clarification of application rates to mushroom houses; and revised droplet sizes for wide area mosquito abatement products.

In addition, to address concerns regarding the residential use of outdoor pesticide misting systems, the following statement has been added to the permethrin RED: "The Agency has developed an Outdoor Residential Misting System web-based fact sheet page designed to help consumers decide if these systems are appropriate for their home, understand safety precautions about using outdoor misting systems, find related information on Integrated Pest Management, and understand the role of the US EPA and state agencies in regulating misters."

Also, the permethrin RED has been amended to reflect the Agency's determination that efficacy data is required for the following product groups which claim to target public health pests: Outdoor residential misting systems, permethrin impregnated clothing products, and permethrin products used on domestic animals. The generic data call-in requirements have also been revised to exclude the following confirmatory studies which the Agency has determined are not required: Whole sediment acute toxicity for freshwater and estuarine/marine invertebrates, directions for use, and enforcement analytical method for animals.
