Foreword	vii
Executive Summary	viii
I. Introduction	1
Background	1
Technical Support Document	4
Objective	4
Structure and Content	4
Approach to Refining Tidal-Water Designated Uses	6
Determining attainment of current designated uses is not feasible	7
Justifying the refined tidal-water designated uses	8
Assessing attainability of the refined tidal-water designated uses	9
Consideration of economic and social impacts	11
Jurisdiction Water Quality Standards and Tributary Development Process	12
Literature Cited	13
II. The Chesapeake Bay and Its Watershed	14
Background	14
Chesapeake Bay Watershed	16
Chesapeake Bay Tidal-Water Quality Problems	19
Causes of Chesapeake Bay water quality problems	23
Human population increase	23
Loss of habitat	24
Excess nutrients	27
Excess sediments	28
Sources of Nutrient Loads to the Chesapeake Bay Tidal Waters	28
Nonpoint sources	35
Point sources	35

Atmospheric sources	40
Anthropogenic source inputs	42

III. Why Attaining the Current Tidal-Water Designated Uses Appears Not to be Feasible

Background

Natural Conditions That May Prevent Attainment of Current Designated Uses .

Paleoecological record of natural conditions

Water quality conditions under completely forested and pristine watersheds

Strengths and limitations of the all-forest and pristine scenarios

Model-simulated natural dissolved oxygen conditions

Human-Caused Conditions That Cannot Be Remedied Which Appear to Prevent Attainment of Current Designated Uses

Findings and Conclusions

Literature Cited

IV. Refined Designated Uses for the Chesapeake Bay and Its Tidal Tributaries

Background

Renewed commitment to restore Chesapeake Bay Water quality

Current state tidal-water designated uses

Refining Tidal-Water Designated Uses

Living resource-based refined designated uses and protective criteria

Chesapeake Bay Tidal-Water Designated Uses

Migratory fish spawning and nursery designated use

Shallow-water bay grass designated use

Open-water fish and shellfish designated use

Deep-water seasonal fish and shellfish designated use

Deep-channel seasonal refuge designated use

Chesapeake Bay Tidal-Water Designated Use Boundaries

Migratory fish spawning and nursery designated use boundaries

Open-water, deep-water and deep-channel designated use boundaries	96
Flow and circulation	101
Vertical density gradients and pycnoclines	101
Delineating the designated use boundaries	107
The boundary delineated process	109
Shallow-water bay grass designated use boundaries	125
Maximum depth of persistent or abundant plant growth-based boundaries . . .	126
Benefits of deeper underwater bay grass distribution	127
Historical underwater bay grass distribution	127
Underwater bay grass no-grow zones	129
Determining the maximum depth of persistent/abundant plant growth	132
Underwater bay grass restoration goal-based boundaries	139
Shallow-water habitat area to support restoration goal-based boundaries	144
Confirming That the Refined Designated Uses Meet Existing Uses	152
Migratory spawning and nursery existing use	152
Shallow-water existing use	153
Open-water existing use	153
Deep-water and deep-channel existing uses	153
Literature Cited	153

V. Technological Attainability of the Refined Recommended Designated Uses

Background	159
Defining and Determining Technological Attainability for Dissolved Oxygen . .	160
Development of level-of-effort scenarios	160
Point sources	162
Onsite treatment systems	164
Nonpoint source agriculture	165
Nonpoint source urban	166
Nonpoint source forestry	167
Atmospheric deposition	167
Load reductions by tier	169
Development of the criteria attainability tables	174
Assessing criteria exceedance through the cumulative frequency distributions	175
Applying the Kolmogorov-Smirnov test for criteria attainability using the CFD	178
Use of the '10 percent default reference curve' versus biological reference curves	179
Consideration of Different Hydrology Periods	179

Technological attainability of the open-water, deep-water and deep-channel designated uses	180
Migratory fish and spawning and nursery designated use attainability	181
Open-water fish and shellfish designated use attainability	181
Deep-water seasonal fish and shellfish designated use attainability	184
Deep-channel seasonal refuge designated use attainability	184
Sediment Reduction and Its Effect on Water Quality	185
Attainability of the Shallow-Water Designated Use	185
Attaining the shallow-water bay grass designated use	185
Measures to Attain the Shallow-Water Designated Use	187
Stream/Riverine BMPs	187
Shoreline BMPs	187
In-water BMPs	187
VI. Summary of Economic Analyses	
Estimated Costs	189
Screening-Level Impact Analysis	192
Economic Impacts and Benefits	194
Glossary	197
Acronyms	205
Appendices	
A. Development of the Level-Effort Scenarios	A-1
B. Data Supporting Determination of the Shallow-Water Designated Use Depths and Underwater Bay Grasses Restoration Goals	B-1
C. Underwater Bay Grasses No-Grow Zones	C-1
D. Vertical Stratification and the Pycnoclines	D-1
