

ASHLAND/NSP LAKEFRONT SITE
MAY 15, 2008 PROGRESS REPORT (No. 54)
WDNR BRRTS #02-02-00013
CERCLA Docket No. V-W-04-C-764
USEPA ID# WISFN057952

This is the fifty-fourth progress report prepared in accordance with the Administrative Order on Consent (AOC) for the Ashland/NSP Lakefront Site, effective November 14, 2003. This report covers activities completed during April 2008. It is intended to meet the requirements described in Task 8 of the Statement of Work appended to the AOC.

Field Activities Completed

Free-Product Recovery System

The free-product recovery system operated continuously from April 2nd through May 7th. However, a low volume of free-product was recorded during this period. A total of only 16.3 gallons was collected during this 35-day duration, a rate of 0.46 gal/day. This recovery rate contrasts with the previous rate of 3.4 gallons/day, the corrected amount measured since early December. However, as described in the April (No. 53) 2008 monthly report, this decline is likely related (in part) to increases in flow from EW-4 following the spring thaw.

The total system flow discharged to the sewer between April 2nd and May 7th was 57,224 gallons. Between March 28th and April 21st, no readings were made for the EW-4 meter because of dead batteries; total flow to the sanitary sewer was measured, but this data corresponds to combined flows from the Copper Falls Aquifer wells (EW-1, -2 and -3, and ravine well EW-4). However, the flow from EW-4 between April 21st and May 7th was 12,277 gallons. This represents approximately 43 percent of the total flow (28,687 gallons) during this same 16-day period. This percentage is comparable to ratios measured during the spring-fall during 2007, when the free-product recovery rate declined following the peak recovery rate (about 6 gal/day) measured in early April of that year. Following the onset of winter in December 2007, recovery rates increased dramatically, but again declined at the beginning of spring 2008. This data indicates that the physicochemical behavior of the free-product captured by the extraction system has likely been altered by the injection of oxidant. This alteration has caused the material to be treated by the liquid phase system, rather than separated via gravity. Only when the flow from EW-4 is minimized, does the resultant loss of momentum of the material through the separator allow a larger volume to segregate via gravity.

The April water quality data indicates the liquid phase treatment system continues to function. The concentration of total VOCs was 67,500 µg/l measured at the influent; it was efficiently reduced to 0.72 µg/l at the effluent. The air monitoring data confirms this system also operates properly. No detections of any compounds were made at either the influent, pre-carbon (mid-flow) or effluent monitoring points.

The summary of system monitoring data is included in Tables 1 – 5. Lab analysis reports for the system monitoring samples are included in the Appendix.

Northern Minnesota Services removed 11 55-gallon drums of treatment system waste for proper off-site disposal on April 25th. These included six drums of spent granular activated carbon (GAC), and five drums of personnel protective equipment (PPE).

RI Activities

All RI field activities were completed during November 2005.

SITE Program Activities

The SITE injection program was completed on February 2, 2007 and all equipment demobilized from the Ashland site the week of February 5, 2007.

USEPA's final report on the demonstration is pending.

Treatability Studies

NSPW submitted the draft Bench Scale Air Emissions Treatability Study report to USEPA for review on August 16, 2007. The Cap Flux Test Treatability Study report was submitted on September 18, 2007. The third and final treatability study report, the Multiphase Flow and Consolidation Testing Report, was submitted for review on October 26, 2007. NSPW subsequently submitted Addendum One to the Cap Flux Test Treatability Study report, the Extended Duration Column Test report, on January 9, 2008.

Reporting Activities Completed

Final RI Report

USEPA provided a formal RI Report approval letter to NSPW on February 5, 2008.

Draft Comparative Analysis of Alternatives Memorandum/Draft FS

NSPW submitted the revised draft Comparative Analysis of Alternatives Memorandum (CAA) to USEPA on October 5, 2007; the draft Feasibility Study (FS) was submitted on October 29, 2007.

Representatives from NSPW, USEPA and WDNR held a conference call on April 24th to discuss progress regarding the revised draft FS. The group confirmed that the revised FS and the responses to the original draft FS comments will be submitted for review on May 15th.

Field Activities Planned

Coleman Engineering continues to monitor the free-product removal system on a weekly basis during May.

Reporting Activities Planned

As described above the submittal date for the revised draft FS coincides with the date of this

¹ Increase in free product removal w/ no change in groundwater removal volume due to free product collection tank and wash tank being pumped out and shipped to WRR in Eau Claire, WI. Total volume of 1324 gallons, w/ a current estimate of 85% free product in that volume.

² Correction of revised quantity of free product removed on 4/23/2003 of -211.9 gallons due to settling of emulsified free product measured on this date.

**Table 4
Remediation System Air Treatment Summary
Northern States Power, Ashland, Wisconsin**

Sample Date	Total Elapsed Time (days) ¹	Sample Type (Influent/Effluent)	Air Flow Rate (CFM)	Effluent Temp. (1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.

(2) When a below detection result occurs, the assumed value is half of the detection limit.

For the 1/19/01 sampling, the samples were incorrectly labeled: Drum #1 is influent to Drum #1, Drum #2 is influent to Drum #2, and Air Stripper is Air Effluent.

(3) Daily emission rate based on laboratory results.

(4) Emission rate to date calculated from average daily emission rate and total days of remediation system operation.

- (1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.
- (2) When a below detection result occurs, the assumed value is half of the detection limit.
- (3) Removal based on Influent vs. Effluent
- (4) Emission rate to date calculated from average concentrations in effluent and total days of remediation system operation.
- (5) This sample was collected at the oil-water separator discharge, prior to the air diffuser.
- (6) This sample was collected at the inlet to the liquid phase carbon.

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection LOQ = Limit of Quantitation ND = Not Detected (< LOD) 1000 ug/L = 1 mg/L
 DWB = Dry Weight Basis NA = Not Applicable %DWB = (mg/kg DWB) / 10000
 MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.

April 10, 2008

Client:

URS CORPORATION - MILWAUKEE
6737 West Washington St., Suite 226
Milwaukee, WI 53214

Work Order: CRD0371
Project Name: Xcel Energy - Ashland
Project Number: Air Samples

Attn: Paul Sklar

Date Received: 04/07/08

The Chain(s) of Custody, 2 pages, are included and are an integral part of this report.

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(800)750-2401

SAMPLE IDENTIFICATION	LAB NUMBER	COLLECTION DATE AND TIME
Air Stripper	CRD0371-01	04/02/08
1st Stage Carbon	CRD0371-02	04/02/08
Air Effluent	CRD0371-03	04/02/08

Case Narrative: Total Hydrocarbons quantified as Gasoline.

Wisconsin Certification Number: 999917270

Field blanks are not used in sample correction unless noted.

Reproduction of this analytical report is permitted only in its entirety. This report shall not be reproduced except in full without the written approval of the laboratory.

TestAmerica Laboratories, Inc. certifies that the analytical results contained herein apply only to the specific sample analyzed.

Approved By:

Michael K. McGee, CIH - Laboratory Director

AIHA Lab Certification Number: #101044
