MEMORANDUM

DATE: FEB 29 2012

SUBJECT: Petroleum Hydrocarbons and Quadrant 1: LCP Chemicals NPL Site

FROM: Galo Jackson *GVV*
Remedial Project Manger
Superfund Remedial Branch

TO: File

The purpose of this memorandum is to examine the petroleum-related constituents in the Quadrant 1 groundwater, in light of the boring log records prepared during monitoring well installation in 1995 and 1996.

Background

Because the deepest soil samples taken in Quadrant 1 were from the four and a half feet below ground surface depth (based on the U.S. EPA Region 4 Human Health risk Assessment site-specific recommendations), the boring log records prepared during monitoring well installation were examined for mention of petroleum. Of the five monitoring well clusters completed in Quadrant 1, the boring logs for two of the well clusters (MW-106 and MW-108) recorded petroleum in the upper 10-to-15 feet of the boring log. The logged descriptions of petroleum ranged from "free oil" to "humate or weathered oil."

In an effort to determine the extent of impacts of any petroleum or petroleum products on the Quadrant 1 groundwater, the groundwater database was examined for the analytes presented on Table 1. The metals on Table 1 as well as the organic compounds are potentially hazardous material found in crude oil. Benzene, toluene, ethyl benzene and xylene (BTEX) are generally found at relatively high concentrations in gasoline. Naphthalene and phenanthrene are associated with diesel fuels and related products.

Quadrant 1 Soil and Groundwater Data

Attachment 1 contains the analytical results for the five well clusters located in the quadrant, dating to 1995. Only the shallower "A" and "B" series wells are presented in Attachment 1, since they are the shallowest wells and therefore the ones most likely to have been impacted by petroleum-related analytes. Table 1 presents the maximum concentrations of the analytes discussed above and compares them to the federal maximum contaminant level (MCL), or where the MCL is not available, the tapwater concentration taken from the June 2011 Regional Screening (RSL) Summary tables. Tapwater RSL concentrations are bolded to differentiate

them from the MCLs. With the exception of naphthalene, the petroleum-related analytes are well below the MCLs or the tapwater RSL.

| Analyte | MCL or Tapwater (ug/L) | Maximum Concentration Detected in Quadrant 1 (ug/L) |
|------------------------|-----------------------------|---|
| Arsenic | 10 | 4.1 |
| Cadmium | 5 | 0.018 |
| Chromium | 100 | 6 |
| Lead | 15 | 2.2 |
| Zinc | 11,000 | 200 |
| Acenaphthene | 2,2000 | 2.2 |
| Acenaphthylene | 1,100² | 4.4 |
| Anthracene | 11,000 | 0.33 |
| Benzo(a)anthracene | 0.029 | ND ³ |
| Benzo(a)pyrene | 0.2 | ND |
| Benzo(b)fluoranthene | 0.029 | ND |
| Benzo(g,h,i)perylene | 1,100² | ND |
| Benzo(k)fluoranthene | 0.29 | ND |
| Chrysene | 2.9 | ND |
| Dibenzo(a,h)anthracene | 0.0029 | ND |
| Fluorene | 1,500 | 2.2 |
| Flouranthene | 1,500 | 0.13 |
| Phenanthrene | 1,100 ² | 1.3 |
| Naphthalene | 0.14/100¹ | 140 |
| Pyrene | 1,100 | 0.63 |
| Benzene | 5 | 3.2 |
| Toluene | 1,000 | 0.32 |
| Ethylbenzene | 70 | 39 |
| Xylene | 10,000/200 | 2.6 |

¹ The lifetime health advisory for naphthalene is 100 ug/L.

² Pyrene used as a surrogate

³ Not detected

Attachment 2 focuses on the volatile compounds which are likely to be of concern from a vapor intrusion standpoint, the BTEX compounds and naphthalene. As with Attachment 1, only data from the "A" and "B" series wells are presented, dating back to 1995. Of the five compounds presented in Attachment 2, naphthalene was analyzed 74 times and detected 23 times, perhaps because there existed a naphthalene plant in Quadrant 3. On two occasions it was detected above the lifetime health advisory of 100 ug/L. Duplicate and subsequent sampling and analyses of the two wells found above the lifetime health advisory for naphthalene revealed concentrations below that health advisory (Attachment 2). Attachment 3 presents all the naphthalene soil results for Quadrant 1. The maximum naphthalene concentration detected in Quadrant 1 was 0.9 milligram per kilograms (mg/kg), or below the RSL based on cancer risk of 1E-6 and inhalation exposure, which is 3.6 mg/kg.
