Subject: RE: Cape Winds (BAD) Project

Mr. Cahill:

The destruction of our Sound would not be worth saving a few pennies more...and as it turns out...there will be no savings, but rather, higher energy costs!

The only reason Cape Winds wants this project completed is so they can claim millions (billions?) in federal funding for "alternative energy projects..." even if some of those projects are foolish.

Many of these wind companies are targeting public lands all over the nation, so that they don't have to put money out for the purchase of private/company lands on which to build their inefficient windmills. They have already destroyed many public lands which were set aside for the public...not for a private company's profits!

Let them put it deeper at sea, if they must...but O, they don't want to have to spend money to build deeper into the water...just like the oil rigs in the Gulf...allowed to be constructed without the extra cost of emergency pipes in case of such a disaster as occurred...pipes which

Most countries require...but not America.

Greed has replaced all sense of ethics, of concern for our one planet, for the future home of our children...

For shame.
Jay Stevens
