July 1997

Prepared for
U.S. Department of Energy
Assistant Secretary for Fossil Energy

John Ford, Project Manager
National Petroleum Technology Office
P.O. Box 3628
Tulsa, OK 74101

Prepared by:
Environmental Assessment Division and Energy Systems Division
and Energy Systems Division
Argonne National Laboratory
This bibliography was created to support projects conducted by Argonne National Laboratory (ANL) addressing issues related to naturally occurring radioactive material (NORM) in petroleum industry wastes. Each of these projects was conducted under the direction and funding of the U.S. Department of Energy (DOE). Through the course of a specific project, the DOE tasked ANL to prepare the bibliography for publication and distribution. Woodward-Clyde Federal Services assisted ANL in this effort.

The bibliography provides citations for many of the available published reports, papers, articles, and presentations on petroleum industry NORM. In the past few years, the rapid expansion of NORM treatment and disposal technologies, the efforts to characterize NORM wastes and their associated potential risks, and the promulgation of state-level NORM regulatory programs have been well-documented in project reports and in papers presented at technical conferences and symposia. In compiling this bibliography, we endeavored to include as many of these publications as possible. Undoubtedly, we have missed some, and we apologize to those individuals whose work is not represented in this bibliography.
