

The City of Wooster, Ohio

Water Resource Recovery Facility

Presented by: Mel Kurtz, President quasar energy group

quasar at a Glance

- HQ: Cleveland, OH
- Over \$150M in Executed Projects
- 13 Operational Digesters (OH, NY, MA)
- Capacity to annually manage 700,000 tons of organic waste
- Municipal, Industrial & Agricultural ADs
- Mature US Supply Chain

Full Suite of Services

Sustainable Solutions

Nutrients

Natural fertilizer and animal bedding

Renewable Energy

Water Resource Recovery

- Treatment plants are facing capital, technical, and regulatory challenges.
- Federal funding to address these challenges has decreased 90% since the 1980's.¹
 Wastewater is rich in natural resources water, nutrients and energy
- Treatment plants consume 3% of the total US energy demand.
- Biosolids have the potential to produce 12% of the US electric demand!¹

quasar partnered with the City of Wooster to turn their Water Pollution Control Plant into a Water Resource Recovery Facility.

The Challenges

Regulatory Issues:

EPA Compliance
Sewer Capacity Restrictions

Process Issues:

Solids Handling
Antiquated Digesters
Insufficient Biogas Production

Disposal Issues:

Land Application Restrictions
Nutrient Value Verification
Value Proposition for Farmers

Water Pollution Control Plant Prior to quasar Project

Evaluation of Opportunity

All projects require a Feasibility Study which at a minimum includes:

- Identify additional regional organics
- Evaluate energy potential
- Effluent management
- Location/ Logistics
- Engineering package
- Secure all regulatory/permit approvals

quasar Construction

Challenges:

- Old Facility
- Existing Footprint
- Plant Operations Maintained

Scope of Work:

- Retrofit three 1960s Digesters
- Construct Biomass Tank
- Building for Belt Thickener
- Solids Receiving Station
- Install 1100 kW Generator

Public-Private Partnership

Public/Private Partnership is the new "buzz" word for municipal projects. But what does it really mean once the bid process is over?

In Wooster PARTNERSHIP means collaboration;

- Treatment plant continued operating during construction,
- Detailed daily communication between entities
- Integration of management
- Retrofit completed; no change order invoices to City
- Relationship will continue long after the initial project is completed.

Project Results

Address OEPA Findings & Orders

Run the WPCP on renewable energy

√

Manage the City's biosolids at a reduced rate

 \checkmark

Reduce overall operating expenses

Increase WPCP capacity

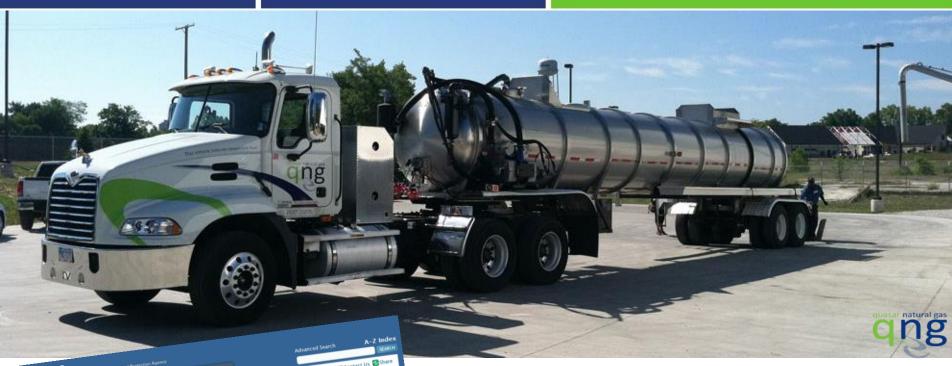

Contribute to local economic development

Future Innovation

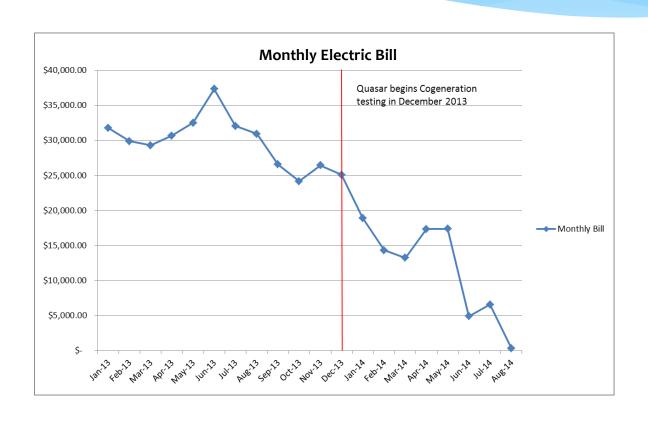

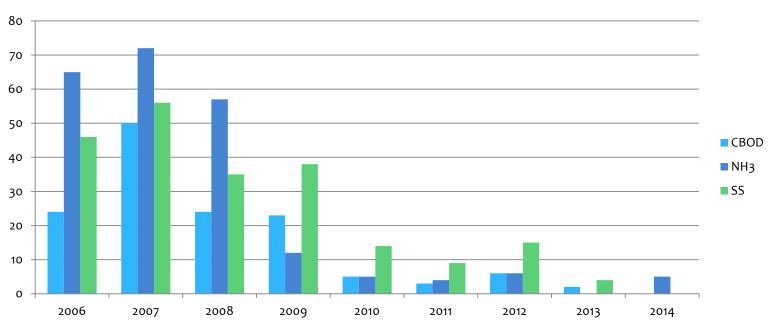

quasar is listed as an approved Renewable Fuel Producer under the EPA's Renewable Fuels Standard 2 (RFS2) Program. quasar generates RINs from renewable fuel sold for transportation at the Columbus and Zanesville digesters. The fueling stations are open to the public Monday through Saturday. Wooster is next!

How Quickly did the City benefit?

What are the other benefits?

Annual NPDES Violations

Next Steps

- * Interconnection between WRRF and Water Treatment Plant to take advantage of excess power generation and utilize 2.2 MW backup generator
- Future CNG Fueling Station
- Conversion of Utility vehicle fleet and eventually City vehicles

Summary

Private/Public partnership;

- * reduced costs by over \$300,000 per year,
- * attracted new businesses to the region,
- achieved Ohio EPA compliance,
- * and expanded the facility's capacity.

Public/Private partnership is a real solution for municipal treatment plants.
