Volume III - Data Validation Procedures and Laboratory Certifications

Validation Annexes

A Data Validation Procedures for Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs)
B Data Validation Procedures for Analyses of Polychlorinated Biphenyls (PCBs)/Pesticides and Herbicides in Solid and Liquid Matrices
C Data Validation Procedures for Inorganic Analytes
D Data Validation Procedures for Polychlorinated Dibenzo-p-Dioxins (PCDDs)/Polychlorinated Dibenzofurans (PCDFs)
E Data Validation Procedures for Conventional Parameters Analytes
F Data Validation Procedures for Air Analyses of Polychlorinated Biphenyls (PCBs)

Attachments

A Laboratory Qualifications for Northeast Analytical Services, Inc.
B Laboratory Qualifications for SGS Environmental Services, Inc.
C Laboratory Qualifications for Columbia Analytical Services, Inc.
D Laboratory Qualifications for Severn Trent Laboratories, Inc.
E Laboratory Qualifications for Adirondack Environmental Services
F Laboratory Qualifications for Lancaster Laboratories
G Laboratory Qualifications for Pace Analytical Services, Inc.

Validation Annexes

Validation Annex A

Data Validation Procedures for Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs)

Validation Annex A

Data Validation Procedures for Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs)

I. Introduction

This Standard Operating Procedure (SOP) describes the data validation procedures for a United States Environmental Protection Agency (EPA) Region I tiered review of the data for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) conducted by EPA Methods 8260B and 8270C, respectively. Data review procedures presented in this SOP were developed from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines*, USEPA Region I, July 1, 1993.
- *Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses*, USEPA Region I, Draft, December 1996.
- *CLP Organics Data Review and Preliminary Review*, USEPA SOP HW-6, Revision 10, October 1995.
- *USEPA Contract Laboratory Program, Statement of Work for the Organics Analysis, Revision OLM0.1.9*, July 1993.

II. EPA Region I Tiered Validation Procedures

All VOC and SVOC analytical data will be validated to a Tier I level following the procedures presented in the *Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses* (July 1996, revised December 1996) and *the Region I Tiered Organic and Inorganic Data Validation Guidelines* (EPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this FSP/QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors). Based on this modified Tier I review, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate Relative Percent Difference (RPD) compliance. Additional Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of a minimum of 25% of the data, and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. An analytical data validation summary spreadsheet (in the form presented in Attachment A-2) is prepared to document the data review. The following steps are taken to complete a Tier I review:

Step 1 - Review the laboratory case narrative. During review, if there are any deviations that warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all forms are present and complete. If any of the forms are not in the data package, contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be conducted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data is provided for each sample and associated QA/QC samples in the data package. Contact the laboratory to obtain missing data (if required):

- Case Narrative
- Chain-of-Custody Forms
- Traffic Reports
- QA Sample Summary Forms
- Instrument Calibration Summary Forms
- Instrument Run Logs
- Sample Preparation Logs
- Instrument/Method Detection Limits
- Standards Preparation Logs
- Supporting (raw) Data

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to the steps discussed above, the Tier I review of data packages for projects subject to this FSP/QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

IV. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review, plus review of the data package summary forms for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. Sample qualification is performed (if required) following EPA Region I Guidelines presented in Section I.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly recorded on the data summary package Form I, or laboratory equivalent, with a blue ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on Form I. Below is a list of qualifiers that may be used.

J The compound was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL). (When this qualifier is used in combination with the letter C -- i.e., JC -- that indicates that the sample result is an estimated concentration due to certain QC deficiencies and that a bias-corrected result is available, as discussed further below.)

U The compound was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution and (for solid samples only) percent moisture. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL), as presented in Attachment A-1.

UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) J, as presented in Attachment A-1.

R Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B. Holding Times

Criteria

1.0 Purgeables: Water samples are preserved to a pH of less than 2 with HCl, H_2SO_4, or solid $NaHSO_4$, and stored at 4° centigrade. Samples must be analyzed within 14 days. Soil samples are preserved per SW-846 Method 5035 and must be analyzed within 14 days.

1.1 Extractables (Includes Base/Neutrals and Acids): Samples (waters or soils) and extracts must be preserved at 4° centigrade. Soil and water samples must be extracted within seven days and the extract must be analyzed within 40 days.

Action

Specific holding times for each analysis and sample type are presented in Table 1 of the FSP/QAPP. The following steps are performed for the validation of data due to holding times:

Step 1 - Establish the holding time by comparing the sampling date on the chain-of-custody with the dates of analysis and/or extraction on Form I, or laboratory equivalent. The chain-of-custody is also reviewed to determine if the samples were properly preserved.

Step 2 - If the holding times are exceeded by less than 24 hours, then no qualification of data is needed.

Step 3 - If the holding times are exceeded by more than 24 hours but less than 14 days, then all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 4 - If the holding times are exceeded by more than twice the specified holding time, then all results are qualified as unusable (R).

C. Percent Moisture Content

Criteria

Soil/sediment/solid sample results must be adjusted for percent solids and must have percent solids greater than 30%.

Action

The following steps are performed by reviewing the sample result summary form during the validation of percent solids data:

Verify that the percent solids of soil/sediment/solid samples are greater than 30%.

a. Soil/sediment/solid sample results with a percent solid of less than 10% are qualified as unusable (R)

b. Positive and non-detected soil/sediment/solid sample results with percent solid results within the range of greater than 10% to less than 30% are qualified as estimated (J) and unusable (R), respectively.

D. GC/MS Tuning

Criteria

The following criteria must be met at all times:

1.0 Decafluorotriphenylphosphine (DFTPP)

m/z	Ion Abundance Criteria
51	30.0 - 60.0% of m/z 198
68	less than 2.0% of m/z 69
70	less than 2.0% of m/z 69
127	40.0 - 60.0% of m/z 198
197	less than 1.0% of m/z 198
198	base peak, 100% relative abundance
199	5.0 - 9.0% of m/z 198
275	10.0 - 30.0% of m/z 198
365	greater than 1.0% of m/z 198
441	present, but not less than m/z 443
442	greater than 40.0% of m/z 198
443	17.0 - 23.0% of m/z 442

1.1 Bromofluorobenzene (BFB)

m/z	Ion Abundance Criteria
50	15.0 - 40.0% of the base peak
75	30.0 - 60.0% of the base peak
95	base peak, 100% relative abundance
96	5.0 - 9.0% of the base peak
173	less than 2.0% of m/z 174
174	greater than 50.0% of the base peak
175	5.0 - 9.0% of m/z 174
176	greater than 95.0%, but <101.0% of m/z 174
177	5.0 - 9.0% of m/z 176

Action

Review Form V, or laboratory equivalent, to determine if a mass calibration is in error. If an error is identified, then all data associated with the evaluated spectra are qualified as unusable (R).

E. Calibration

Criteria

1.0 Initial Calibration for VOCs and SVOCs

1.0.1 All average Relative Response Factors (RRFs) for must be greater than or equal to 0.05.

1.0.2 All Percent Relative Standard Deviation (%RSD) values must be less than or equal to 30%.

1.1 Continuing Calibration VOCs and SVOCs

1.1.1 All daily RRFs must be greater than or equal to 0.05.

1.1.2 All Percent Difference (%D) values must be less than or equal to 25%.

Action

The following steps are performed by reviewing Forms VI and VII, or laboratory equivalents, during the validation of calibration data:

Step 1 - Verify that all the average RRFs for the initial calibration are greater than 0.05. If the average RRF is not in control, then:

a. All positive sample results for that compound are qualified as estimated (J).

b. All non-detected sample results for compounds that do not meet their analytical method defined RRF are qualified as unusable (R). Several of the organic compounds exhibit instrument RRFs that are below the USEPA Region I minimum value of 0.05, but meet the analytical method criterion, which does not specify minimum RRFs for these compounds. These compounds will be calibrated for by the laboratory at a higher concentration than the compounds that normally exhibit RRFs greater than the USEPA Region I minimum value of 0.05 in an effort to demonstrate acceptable response. USEPA Region I guidelines state that non-detected compound results associated with a RRFs less than the minimum value of 0.05 are to be rejected. In the case of these select organic compounds, where the RRFs are an inherent problem with the current analytical methodology; the non-detected samples results will be qualified as an estimate (J).

Step 2 - If use of data is critical, the average RRF will be calculated with the elimination of the low or high calibration standard. If the average RRF is in control with the elimination of the low calibration standard, then:

a. All non-detected sample results for that compound are adjusted to the lowest calibration standard used to calculate the acceptable average RRF.

b. All positive sample results for that compound which are below the lowest calibration standard used to calculate the acceptable average RRF are qualified as estimated (J).

If the average RRF is in control with the elimination of the high calibration standard, then:

a. All positive sample results for that compound which are above the highest calibration standard used to calculate the acceptable average RRF are qualified as estimated (J).

Step 3 - Verify that all %RSD values for the initial calibration are greater than 30%. If any %RSD is not in control, then all detected and non-detected sample results for that compound are qualified as estimated (J) and (UJ), respectively.

Qualification of VOC/SVOC Compounds Based on Initial Calibration Deviations

Sample Results	Avg. RRF $\geq$ 0.05 and %RSD $\leq$ 30.0%	Avg. RRF < 0.05 and %RSD $\leq$ 30.0%	Avg. RRF $\geq$ 0.05 and %RSD > 30.0%	Avg. RRF < 0.05 and %RSD > 30.0%
Detects	-	J	J	J
Non-Detects	-	R or ND(PQL)J	ND(PQL)J	R or ND(PQL)J

Step 4 - Verify that all RRF values for the continuing calibration are greater than 0.05. If any continuing calibration RRF is not in control, then:

a. All positive sample results for that compound are qualified as estimated (J).

b. All non-detected sample results for are qualified as unusable (R). Several of the organic compounds exhibit instrument RRFs that are below the USEPA Region I minimum value of 0.05, but meet the analytical method criterion, which does not specify minimum RRFs for these compounds. These compounds will be calibrated for by the laboratory at a higher concentration than the compounds that normally exhibit RRFs greater than the USEPA Region I minimum value of 0.05 in an effort to demonstrate acceptable response. USEPA Region I guidelines state that non-detected compound results associated with a RRFs less than the minimum value of 0.05 are to be rejected. In the case of these select organic compounds, where the RRFs are an inherent problem with the current analytical methodology; the non-detected samples results will be qualified as an estimate (J).

Step 5 - Verify that all %D values are greater than 25%. If any %D is not in control, then all detected and non-detected sample results for that compound are qualified as estimated (J) and (UJ), respectively.

Qualification of VOC/SVOC Compounds Based on Continuing Calibration Deviations

Sample Results	Avg. RRF $\geq$ 0.05 and %RSD $\leq$ 25.0%	Avg. RRF < 0.05 and %RSD $\leq$ 25.0%	Avg. RRF $\geq$ 0.05 and %RSD > 25.0%	Avg. RRF < 0.05 and %RSD > 25.0%
Detects	-	J	J	J
Non-Detects	-	R or ND(PQL)J	ND(PQL)J	R or ND(PQL)J

F. Blanks

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 For each matrix and for each 12-hour window, a method blank must be analyzed for volatile analyses.

1.2 For each matrix and each extracted batch, a method blank must be analyzed for semi-volatile analyses.

Action

Qualification of sample results due to blank contamination is dependent on the conditions and origin of the blank. No sample results are reported unless the concentration of the compound in the sample exceeds 10 times the amount in the blank for the compounds listed below, or five times the blank amount for all other compounds. No sample results are corrected by subtracting blank values. Specific qualifications of sample data are as follows:

Step 1 - Review Form IV, or laboratory equivalent, within the data package to ensure that criteria III.E.1.1 and III.E.1.2 are in compliance. If they are not, the laboratory will be contacted by the reviewer for a written explanation.

Step 2 - Review Form I, or laboratory equivalent, for all blanks within the data package.

Step 3 - If a compound is found in the blank but not in the sample, then the data are not qualified.

Step 4 - When any compound (other than the five listed below) is detected in the sample and the sample concentration is less than five times the concentration detected in the associated blank, the data are qualified. For the following five compounds, the sample results are qualified if the sample concentration is less than 10 times the concentration detected in the blank.

Common laboratory contaminants:

a. Methylene chloride
b. Acetone
c. Toluene
d. 2-Butanone
e. Common phthalate esters

Note: Any difference between the sample analyses and the related blank analyses which involve weights, volumes, or dilution factors, must be taken into account when the 5-times or 10-times criteria are applied.

The following are examples of how qualifications apply to blank data:

a. When the sample result is greater than the PQL but less than the action level (5-times or 10-times) from the blank result, the sample results are qualified as non-detects. As in the example below, the sample result for the 10-times rule is less than 70 (or 10 x 7), and for the 5-times rule the result is less than 35 (or 5 x 7); therefore, they are qualified as described.

Factor	10-times	5-times
Blank Result	7	7
PQL	5	5
Action Level	70	35
Sample Result	60	30
Qualified Sample Result	60 U	30 U

b. When the sample result is less than the PQL and also less than the action level (5-times or 10-times) from the blank result, the sample results are qualified as non-detects by using the PQL as the detection limit. As in the example below, the sample result is less than the PQL in both instances and the sample results are qualified as described.

Factor	10-times	5-times
Blank Result	6	6
PQL	5	5
Action Level	60	25
Sample Result	4 J	4 J
Qualified Sample Result	5 U	5 U

c. When the sample result is greater than the blank action level (5-times or 10-times), the sample results are not qualified. As in the example below, the sample results are greater than the blank action level and the sample results are not qualified.

Factor	10-times	5-times
Blank Result	10	10
PQL	5	5
Action Level	50	50
Sample Result	120	60
Qualified Sample Result	120	60

Step 5 - When excessive amounts of contamination exist (i.e., saturated peaks by GC/MS), all compounds affected are qualified as unusable (R).

Note: As mentioned above, similar consideration is given to Tentatively Identified Compounds (TICs) which are found in both the sample and the associated blank(s).

G. Surrogate Recovery

Criteria

Sample and blank surrogate recoveries for VOCs and SVOCs must be within the control limits listed in Table 5 of the FSP/QAPP.

Action

Qualification of the data due to surrogate recoveries being out of control is based on the evaluation of all data provided in the data package, especially considering the complexity of the effect of sample matrices. These qualifications are completed in the following steps:

Step 1 - Surrogate recoveries tabulated on Form II, or laboratory equivalent, for each fraction are evaluated against the control limits provided in Table 5.

Step 2 - No qualification of the data is needed if less than two surrogates are out of control for the base/neutral or acid fraction, or one in the volatile fraction, or unless any surrogate has a recovery less than 10%.

Step 3 - If at least two surrogates in a base/neutral or acid fraction or one surrogate in the volatile fraction are out of control, the following steps are taken:

a. All positive results for that associated fraction with surrogate recoveries above the upper control limit are qualified as estimated (J).

b. All positive results for that associated fraction with a surrogate recovery that is less than the lower control limit are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) re-analyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC) and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment A-2).

c. All non-detected results associated with a surrogate recovery that is less than the lower control limit but greater than 10% are qualified as estimated (UJ).

Step 4 - If any surrogate recoveries in a fraction are less than 10%, all non-detected results for that fraction are qualified as unusable (R).

Step 5 - When the blank analysis involves surrogate recoveries out of control, the related sample data are reviewed and qualified in the following manner:

a. If the sample data does not contain any surrogate out of control, then the data are not qualified.

b. If the sample data does contain a surrogate out of control, then the sample data are qualified as mentioned above in Steps 2 through 4.

Note: In this special circumstance, the problem is considered to be within the laboratory control and is so noted in the validation report.

Qualification of VOC/SVOC Compounds Based on Surrogate Recovery Deviations

Sample Results	One or more surrogates < 10%	One VOC, two B/N, or two Acid surrogates 10% ≤ %Rec < LL	All VOC, one B/N, or one Acid surrogate LL ≤ %Rec ≤ UL	Avg. RRF < 0.05 and %RSD > 25.0%
Detects	JC	JC	-	J
Non-Detects	R	ND(PQL)J	-	-

LL- Lower limit of method QC acceptance criteria.
UL- Upper limit of method QC acceptance criteria.

H. Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

Criteria

1.0 Spike recoveries must be within the control limits in Table 5 of the FSP/QAPP.

1.1 RPD values between MS and MSD recoveries must be within the control limits in Table 5.

Action

If recovery results are not within the control limits, the following steps are taken to qualify the data:

Step 1 - If the recovery results are below the lower control limit presented in Table 5, the positive results for this compound are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary.

Step 2 - If the recovery result is less than 10%, the non-detects for that compound in the unspiked sample are qualified as rejected (R). This is the only instance that a non-detect is qualified due to recovery results being out of control.

Step 3 - If any of the RPD values are greater than the limits presented in Table 5, positive results for that compound are qualified as estimated (J) in the unspiked sample.

Qualification of VOC/SVOC Compounds Based on MS/MSD Recovery and MS/MSD RPD Deviations

Sample Results	Recovery < 10%	10% ≤ %Recovery < Lower QC Limit	Lower QC Limit ≤ Recovery ≤ Upper QC Limit	Recovery > Upper QC Limit	RPD > QC Limit
Detects	JC	JC	-	J	J
Non-Detects	R	-	-	-	ND(PQL)J

I. Field Duplicates

Criteria

1.0 For water matrices, each compound with a detectable concentration two times greater than the PQL must have an RPD value that is less than 30%.

1.1 For soil matrices, each compound with a detectable concentration two times greater than the PQL must have an RPD value that is less than 50%.

Action

Step 1 - Calculate all RPD values for positive results between the sample and the field duplicate.

$$\text{Calculation: } RPD = \frac{\text{Sample Result - Field Duplicate}}{\text{(Sample Result + Field Duplicate)/2}} \times 100$$

Step 2 - If the RPD value is greater than 30% in a water matrix and both sample results are greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Step 3 - If the RPD value is greater than 50% in a soil matrix and both sample results are greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Step 4 - If the both sample results are less than two times the PQL, qualification of the sample data is not required.

Step 5 - If the one sample result is less than two times the PQL and the other is greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Qualification of VOC/SVOC Compounds Based on Field Duplicate RPD Deviations

RPD	Aqueous > 30% Non-Aqueous > 50%	Aqueous > 30% Non-Aqueous > 50%	Aqueous > 30% Non-Aqueous > 50%
Sample Results	Both duplicate sample concs. $\geq$ 2 times PQL	PQL $\leq$ both duplicate samples concs. < 2 times PQL and $\geq$ PQL	One sample conc. $\geq$ 2 times PQL and other sample conc. < 2 times PQL
Detects	J	-	J
Non-Detects	-	-	-

J. Internal Standards Performance

Criteria

1.0 Internal standard (IS) area counts must not vary by more than a factor of two (-50 to +100%) from the associated continuing calibration standard.

1.1 The retention time of the internal standard must not vary by more than +/- 30 seconds from the associated continuing calibration standard.

Action

Step 1 - Review the tabulated results for the comparison of the IS areas of the samples and the related continuing calibration standard on Form VIII, or laboratory equivalent. If an IS area is outside the -50 to +100% limits, the positive sample results quantitated using that IS are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) re-analyzing the existing sample; (iii) bias-correcting the sample result to 100%; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC) and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment A-2).

Step 2 - If the IS areas of a sample and the related continuing calibration standard on Form VIII, or laboratory equivalent, are less than the -50% criteria but greater than -20%, then non-detected sample results are qualified as estimated (UJ) for that sample fraction.

Step 3 - If the IS areas of a sample and the related continuing calibration standard on Form VIII, or laboratory equivalent, are less than -20%, then non-detected sample results are qualified as unusable (R) for that sample fraction.

Step 4 - If the IS areas of a sample and the related continuing calibration standard on Form VIII, or laboratory equivalent, are greater than the 100% criteria, then detected sample results are qualified as estimated (J) for that sample fraction.

Step 5 - Review the tabulated results for comparison of the IS Retention Time (RT) of the samples and the related continuing calibration standard on Form VIII, or laboratory equivalent. If an IS retention time varies by more than 30 seconds, the data are qualified as unusable (R).

Qualification of VOC/SVOC Compounds Based on Field Duplicate RPD Deviations

Sample Results	Area Counts < 20% of the associated calibration	20% ≤ Area Counts < LL	LL ≤ Area Counts ≤ LL	Area Counts > UL
Detects	JC	JC	-	J
Non-Detects	R	ND(PQL)J	-	-

LL- Lower limit of method QC acceptance criteria.
UL- Upper limit of method QC acceptance criteria.

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results. The confirmation of detected compounds and tentatively identified compounds is also reviewed.

A. Compound Quantitation and Reported Quantitation Limits

Criteria

1.0 The quantitation of detected compounds and the adjustment of the PQL for dilutions and percent solids must be recalculated for 10% of the data.

1.1 The compound's RRF and sample result quantitation must be calculated based on the IS specified in Tables A-1 and A-2.

Action

If the criteria above have not been followed, the laboratory will be contacted by the reviewer and the laboratory will be responsible for a correction of the quantitation and resubmission of the reported data.

B. Detected Identification

Criteria

1.0 Compounds must be within +/- 0.06 Relative Retention Time (RRT) units of the continuing calibration standard RRT.

1.1 Mass spectra of the sample compound and of the current reference spectra must match the following criteria:

1.1.1 All ions present in the reference spectra must be at a relative intensity greater than 10% and must be present in the sample spectrum.

1.1.2 The relative intensities of the ions specified above must agree within +/- 20% (absolute) between the reference and sample spectrum (example: for an ion with an abundance of 50% in the reference spectrum, the corresponding sample ion abundance must be between 30% and 70%).

1.1.3 Ions greater than 10% in the sample spectrum but not present in the reference spectrum must be considered and accounted for.

1.1.4 If a compound cannot be verified by all of the above criteria, but in the technical judgment of the mass spectral interpretation specialist the identification is correct, the laboratory will report the identification and continue with the quantitation.

Action

Professional judgment is used for the qualitative criteria for GC/MS analysis of target compounds. If it is determined that the wrong identification was made, all such data are qualified as not detected (U).

C. Tentatively Identified Compounds (TICs)

Criteria

1.0 For each sample, the laboratory may conduct a mass spectral search of the NBS library. Report the possible identity of the 10 largest VOC fraction peaks and the 20 largest SVOC fraction peaks which are not surrogate, internal standard, or target compounds, but which have an area/height that is greater than 10% of the size of the nearest internal standard. TIC results, if reported by the laboratory, will be reported for each sample on Organic Analyses Data Sheet (Form I, TIC), or laboratory equivalent.

1.1 Requirements for the tentative identification are as follows:

1.1.1 Major ions (greater than 10% relative intensity) in the reference spectrum should be present in the sample spectrum.

1.1.2 Relative intensities of the major ions should agree within +/- 20% between the sample and the reference spectra.

1.1.3 Molecular ions present in the reference spectrum should be present in the sample spectrum.

1.1.4 Ions present in the sample spectrum but not in the reference spectrum should be reviewed for possible background contamination, interference, or coelution of additional TIC or target compounds.

1.2 When the above criteria are not met, but in the technical judgement of the data reviewer or the mass spectral interpretation specialist the identification is correct, the data reviewer may report the identification.

Action

The following steps are taken in qualifying the TICs if they are reported by the laboratory:

Step 1 - Review Form I, or laboratory equivalent, to verify that all TIC results are qualified as estimated concentrations (J).

Step 2 - If it is determined that the tentative identification of a compound is not acceptable, the tentative identification is changed to “unknown” or the correct compound identification.

Step 3 - If all of the required peaks are not searched, the laboratory is contacted to complete the library search of that sample.

Step 4 - Any TIC results that are not sufficiently above the level in the blank are not reported.

Note: Dilutions and sample size must be taken into account when comparing the amounts present in the blanks and samples.

Step 5 - When a compound is not found in the blanks but is a suspected artifact of a common laboratory contaminant, the sample result is qualified as unusable (R).

Step 6 - In the identification of TICs, professional judgment is used. In case there is more than one reasonable match, the result will be reported as "either compound X or compound Y." If the results lack isomer specificity, the TIC result is changed to a non-specific isomer result (e.g., 1,3,5-trimethyl benzene to trimethyl benzene isomer) or to the class of compound (e.g., 2-methyl-3-ethyl benzene to substituted aromatic).

Step 7 - If a sample's TIC match is poor but other samples from the data package have the same TIC with an acceptable match, that identification information may be used to identify the TIC result.

Table A-1
Volatile Internal Standards with Corresponding Target Compounds Assigned for Quantitation

TABLE A-1

VOLATILE INTERNAL STANDARDS WITH CORRESPONDING TARGET COMPOUNDS ASSIGNED FOR QUANTITATION

Option 1: Four Internals

1) Pentafluorobenzene

Acetone
Acetonitrile
Acrolein
Acrylonitrile
Allyl Chloride
Carbon Disulfide
Chloroethane
Chloroform
Chloroprene
Dichlorodifluoromethane
1,1-Dichloroethane
1,1-Dichloroethene
trans-1,2-Dichloroethene
Isobutyl Alcohol
Methacrylonitrile
Methyl Bromide
Methyl Chloride
Methyl Ethyl Ketone
Methyl Iodide
Methylene Chloride
Propionitrile
1,1,1-Trichloroethane
Trichlorofluoromethane
Vinyl Acetate
Vinyl Chloride

2) 1,4-Difluorobenzene

Benzene
Bromodichloromethane
Carbon Tetrachloride
2-Chloroethylvinylether
1,2-Dibromoethane
1,2-Dichloroethane
1,2-Dichloropropane
cis-1,3-Dichloropropene
trans-1,3-Dichloropropene
1,4-Dioxane
Ethyl Methacrylate
Methyl Methacrylate
4-Methyl-2-pentanone
Methylene Bromide
Toluene
1,1,2-Trichloroethane
Trichloroethene

3) Chlorobenzene-d_5

Bromoform
Chlorobenzene
Dibromochloromethane
trans-1,4-Dichloro-2-butene
Ethylbenzene
2-Hexanone
Styrene
1,1,1,2-Tetrachloroethane
Tetrachloroethene
Xylene

4) 1,4-Dichlorobenzene-d_4

1,2-Dibromo-3-chloropropane
1,1,2,2-Tetrachloroethane
1,2,3-Trichloropropane

TABLE A-1

VOLATILE INTERNAL STANDARDS WITH CORRESPONDING TARGET COMPOUNDS ASSIGNED FOR QUANTITATION

Option 2: Three Internals

1) Fluorobenzene

Acetone
Acetonitrile
Acrolein
Acrylonitrile
Allyl Chloride
Benzene
Bromodichloromethane
Carbon Disulfide
Carbon Tetrachloride
Chloroethane
2-Chloroethylvinylether
Chloroform
Chloroprene
Dichlorodifluoromethane
1,1-Dichloroethane
1,2-Dichloroethane
1,1-Dichloroethene
trans-1,2-Dichloroethene
1,2-Dichloropropane
cis-1,3-Dichloropropene
Ethylbenzene
Isobutyl Alcohol
Methacrylonitrile
Methyl Bromide
Methyl Chloride
Methylene Bromide
Methylene Chloride
Methyl Ethyl Ketone
Methyl Iodide
Methyl Methacrylate
4-Methyl-2-pentanone
Propionitrile
1,1,1-Trichloroethane
Trichloroethene
Trichlorofluoromethane
Vinyl Acetate
Vinyl Chloride

2) Chlorobenzene-d_5

Bromoform
Chlorobenzene
1,4-Dioxane
Dibromochloromethane
1,2-Dibromoethane
trans-1,3-Dichloropropene
Ethyl Methacrylate
2-Hexanone
Styrene
1,1,1,2-Tetrachloroethane
Tetrachloroethene
Toluene
1,1,2-Trichloroethane
Xylene

3) 1,2-Dichlorobenzene-d4

trans-1,4-Dichloro-2-butene
1,1,2,2-Tetrachloroethane
1,2,3-Trichloropropane
1,2-Dibromo-3-chloropropane

Table A-2
Semi-Volatile Internal Standards with Corresponding Target Compounds Assigned for Quantitation

TABLE A-2

SEMIVOLATILE INTERNAL STANDARDS WITH CORRESPONDING TARGET COMPOUNDS ASSIGNED FOR QUANTITATION

1) 1,4-Dichlorobenzene-d_4

Aniline
Benzyl Alcohol
bis(2-chloro-1-methylethyl)ether
bis(2-chloroethyl)ether
2-Chlorophenol
m-Cresol
o-Cresol
p-Cresol
m-Dichlorobenzene
o-Dichlorobenzene
p-Dichlorobenzene
Ethyl Methanesulfonate
Hexachloroethane
Methyl methanesulfonate
N-Nitrosodi-n-propylamine
N-Nitrosodiethylamine
N-Nitrosodimethylamine
N-Nitrosomethylethylamine
N-Nitrosomorpholine
N-Nitrosopyrrolidine
Pentachloroethane
Phenol
2-Picoline
Pyridine
o-Toluidine
o,o,o-Triethyl phosphorothioate

2) Naphthalene-d_8

Acetophenone
bis(2-chloroethoxy)methane
p-Chloro-m-cresol
p-Chloroaniline
2,4-Dichlorophenol
2,6-Dichlorophenol
a,a-Dimethylphenethylamine
2,4-Dimethylphenol
Hexachlorobutadiene
Hexachlorophene
Hexachloropropene
Isophorone
Isosafrole
2-Methylnaphthalene
Naphthalene
Nitrobenzene
o-Nitrophenol
N-Nitrosodi-n-butylamine
N-Nitrosopiperidine
p-Phenylenediamine
1,2,4-Trichlorobenzene

3) Acenaphthene-d_{10}

Acenaphthene
Acenaphthylene
2-Chloronaphthalene
4-Chlorophenyl-phenylether
Dibenzofuran
Diethyl phthalate
Dimethyl phthalate
m-Dinitrobenzene
2,4-Dinitrophenol
2,4-Dinitrotoluene
2,6-Dinitrotoluene
Fluorene
Hexachlorocyclopentadiene
1,4-Naphthoquinone
1-Naphthylamine
2-Naphthylamine
5-Nitro-o-toluidine
m-Nitroaniline
o-Nitroaniline
p-Nitroaniline
p-Nitrophenol
Pentachlorobenzene
Safrole
1,2,4,5-Tetrachlorobenzene
2,3,4,6-Tetrachlorophenol
2,4,5-Trichlorophenol
2,4,6-Trichlorophenol

4) Phenanthrene-d_{10}

4-Aminobiphenyl
Anthracene
4-Bromophenyl phenyl ether
Di-n-butylphthalate
Diallate
O,O-Diethyl-O-2-pyrazinyl phosphorothioate
4,6-Dinitro-o-cresol
Diphenylamine
1,2-Diphenylhydrazine
Fluoranthene
Hexachlorobenzene
4-Nitroquinoline-1-oxide
N-Nitrosodiphenylamine
Pentachloronitrobenzene
Pentachlorophenol
Phenacetin
Phenanthrene
Pronamide
sym-Trinitrobenzene

5) Chrysene-d_{12}

2-Acetylaminofluorene
Aramite
Benzidine
Benzo(a)anthracene
bis(2-ethylhexyl)phthalate
Butyl benzyl phthalate
Chlorobenzilate
Chrysene
3,3'-Dichlorobenzidine
p-(Dimethylamino)azobenzene
3,3'-Dimethylbenzidine
Isodrin
Methapyrilene
Pyrene

6) Perylene-d_{12}

Benzo(a)pyrene
Benzo(b)fluoranthene
Benzo(g,h,i)perylene
Benzo(k)fluoranthene
Di-n-octylphthalate
Dibenz(a,h)anthracene
7,12-Dimethylbenz(a)anthracene
Indeno(1,2,3-cd)pyrene
3-Methylcholanthrene

Validation Annex B

Data Validation Procedures for Analyses of Polychlorinated Biphenyls (PCBs)/ Pesticides and Herbicides in Solid and Liquid Matrices

Validation Annex B

Data Validation Procedures for Analyses of Polychlorinated Biphenyls (PCBs)/Pesticides, and Herbicides in Solid and Liquid Matrices

I. Introduction

This Standard Operating Procedure (SOP) describes the data validation procedures for a United States Environmental Protection Agency (EPA) Region I tiered review of the data for polychlorinated biphenyls (PCBs), pesticides, and herbicides analyzed by EPA Methods 8082, 8081A, and 8151A, respectively. Data review procedures presented in this SOP were developed from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines*, USEPA Region I, July 1, 1993.
- *Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses*, USEPA Region I, Draft, December 1996.
- *CLP Organics Data Review and Preliminary Review*, USEPA SOP HW-6, Revision 10, October 1995.
- *USEPA Contract Laboratory Program, Statement of Work for the Organics Analysis, Revision OLM0.1.9*, July 1993.

This SOP will be utilized in the validation of analytical results from solid and liquid samples (e.g., soil, sediment, water, biota). A separate SOP for the validation of PCB data resulting from ambient air samples is provided in Validation Annex F.

II. EPA Region I Tiered Validation Procedures

All analytical data on PCBs, pesticides, and herbicides will be validated to a Tier I level following the procedures presented in the *Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses* (July 1996, revised December 1996) and the *Region I Tiered Organic and Inorganic Data Validation Guidelines* (USEPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this FSP/QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors.) Based on this modified Tier I review, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate Relative Percent Difference (RPD) compliance. Additional Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for a minimum of 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of 25% of the data, and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. An analytical data validation summary spreadsheet (in the form presented in Attachment B-2) is prepared to document the data review. The following steps are taken to complete a Tier I review:

Step 1 - Review the laboratory case narrative. During review, if there are any deviations that warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all forms are present and complete. If any of the forms are not in the data package, contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be conducted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data is provided for each sample and associated QA/QC samples in the data package. Contact the laboratory to obtain missing data (if required):

- Case Narrative
- Chain-of-Custody Forms
- Traffic Reports
- QA Sample Summary Forms
- Instrument Calibration Summary Forms
- Instrument Run Logs
- Sample Preparation Logs
- Instrument/Method Detection Limits
- Standards Preparation Logs
- Supporting (raw) Data

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to the steps discussed above, the Tier I review of data packages for projects subject to this FSP/QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

IV. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review, plus review of the data package summary forms for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. Sample qualification is performed (if required) following EPA Region I Guidelines presented in Section I.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly recorded on the data summary package Form I, or laboratory equivalent, with a blue ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on Form I. Below is a list of qualifiers that may be used.

J The compound was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL). (When this qualifier is used in combination with the letter C -- i.e., JC -- that indicates that the sample result is an estimated concentration due to certain QC deficiencies and that a bias-corrected result is available, as discussed further below.)

U The compound was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution and (for solid samples only) percent moisture. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL), as presented in Attachment B-1.

UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) J, as presented in Attachment B-1.

R Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B. Holding Times

Criteria

Samples (waters or soils) and extracts must be preserved at 4° centigrade. Soil and water samples must be extracted within seven days and extracts must be analyzed within 40 days.

Action

Specific holding times for each analysis and sample type are presented in Table 1 of the FSP/QAPP. The following steps are performed for the validation of data due to holding times:

Step 1 - Establish the holding time by comparing the sampling date on the chain-of-custody with the dates of analysis and/or extraction on Form I, or laboratory equivalent. The chain-of-custody is also reviewed to determine if the samples were properly preserved.

Step 2 - If the holding times are exceeded by less than 24 hours, then no qualification of data is needed.

Step 3 - If the holding times are exceeded by more than 24 hours but less than 14 days, then all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 4 - If the holding times are exceeded by more than twice the specified holding time, then all results are qualified as unusable (R).

C. Percent Moisture Content

Criteria

Soil/sediment/solid sample results must be adjusted for percent solids and must have percent solids greater than 30%.

Action

The following steps are performed by reviewing the sample result summary form during the validation of percent solids data:

Verify that the percent solids of soil/sediment/solid samples are greater than 30%.

a. Positive and non-detected soil/sediment/solid sample results with a percent solid of less than 10% are qualified as estimated (J) and unusable (R), respectively.

b. Positive and non-detected soil/sediment/solid sample results with percent solid results within the range of greater than 10% to less than 30% are qualified as estimated (J).

Qualification of PCBs/Pesticides/Herbicides Compounds Based on Percent Solids Deviations

Sample Results	Percent Solids > 10.0%and <30.0%	Percent Solids < 10.0%
Detects	J	J
Non-Detects	J	R

D. Pesticides and PCBs Instrument Performance

Criteria

1.0 The laboratory must report retention time window data on the pesticide/PCBs Standards Summary (Form X Pest-1 or Form X Pest-2), or laboratory equivalent, for each GC column used to analyze samples. Compounds must be within these retention time windows.

1.1 The total percent breakdown for neither DDT nor endrin may exceed 20%. The percent breakdown is the amount of decomposition that endrin and 4,4'-DDT undergo when analyzed by the chromatograph.

1.2 The retention time of DCB and TCMX in each analysis of PCBs must be compared to the retention time of the DCB and TCMX in Evaluation Standard Mix A. The Percent Difference (%D) must not exceed 0.3% for narrow-bore capillary columns, and 1.5% if wide-bore capillary columns are used.

Action

Review Form V, or laboratory equivalent, to determine if a mass calibration is in error. If an error is identified, then all data associated with the evaluated spectra are qualified as unusable (R).

2.0 If any compound is outside the retention time window listed on Form X Pest-1, Form X Pest-2, or laboratory equivalent, a Tier III validation is warranted.

2.1 DDT and Endrin degradation deviations are qualified in the following manner:

Step 1 - Review DDT breakdown data presented on Form X Pest-1, or laboratory equivalent, to determine if it is greater than 20%. Beginning with the sample following the last in-control standard qualify the data in the following manner:

a. All positive results for DDT are qualified as estimated (J).

b. If DDT was not detected but DDD and DDE are positive, the quantitation limit for DDT is qualified as unusable (R).

c. All positive results for DDD and/or DDE are qualified as estimated (J).

Step 2 - Review endrin breakdown data presented on Form X Pest-1, or laboratory equivalent, to determine if it is greater than 20%. Beginning with the sample following the last in-control standard and qualify the data in the following manner:

a. All positive results for endrin are qualified as estimated (J).

b. If endrin was not detected but endrin aldehyde and endrin ketone are positive, the quantitation limit for DDT is qualified as unusable (R).

c. All positive results for endrin ketone are qualified as estimated (J).

2.2 Review the retention time %D presented on Form X Pest-1, or laboratory equivalent. The following steps outline the qualification of data for retention time shifts of DCB and TCMX:

Step 1 - If the retention time shift for DCB and TCMX is greater than 0.3% for a narrow-bore capillary column, or 1.5% for a wide-bore capillary column, the data are qualified as unusable (R).

Step 2 - If DCB and TCMX are absent, then the retention time shift cannot be evaluated (i.e., if they are diluted out due to high concentration of a target compound or matrix interference). No qualification of the data is required.

E. Calibration

Criteria

1.0 Initial Calibration for Pesticides

The Percent Relative Standard Deviation (%RSD) of calibration factors for aldrin, endrin, DDT, and dibutylchlorendate must not be greater than 10%. When toxaphene is identified, a three-point calibration is required for quantification. If the calibration factor %RSD for DDT or toxaphene is greater than 10%, calibration curves must be used for the quantitation of DDT, DDE, DDD, or toxaphene.

Note: The %RSD linearity check is required only for columns that are used for quantitation of sample and surrogate results. Columns used only to provide qualitative verification are not required to meet this criterion.

1.1 Initial Calibration PCBs and Herbicides

The %RSD for each PCB or herbicide standard must not be greater than 20%.

1.2 Analytical Sequence

1.2.1 Primary Analysis

At the beginning of each 72-hour period, all standards must be analyzed.

1.2.2 Confirmation Analysis

1.2.3 Evaluation Standard Mix A, B, and C are required for the curve.

1.2.4 Only the standards containing the compounds to be confirmed are required. These standards must be repeated after every five samples.

1.2.5 Evaluation Mix B is required after every 10 samples.

1.3 Continuing Calibration

The calibration factor for each standard must be within 15% of the standard at the beginning of the analytical sequence on quantitation columns (20% on the confirmation columns).

Action

The following steps are performed during the validation of data due to calibration deviations:

Step 1 - Verify that the criterion for the initial calibration linearity have been met by reviewing Form VI Pest-2 and Form VI Pest-3 or laboratory equivalents. If the criteria in sections III.C.1.1 and III.C.1.2 are not met, then all associated positive results are qualified as estimated (J).

Step 2 - Verify by reviewing Form VII Pest-1 and Form VII Pest-2, or laboratory equivalents, that the %D between calibration factors is not greater than 15% for the compound(s) being quantitated (20% for compound(s) being confirmed). If the %D is greater than this criterion, then all associated positive results are qualified as estimated (J).

Qualification of PCBs/Pesticides/Herbicides Compounds Based on Initial Calibration Deviations

Sample Results	Initial Calibration %RSD > 20.0%	Continuing Calibration %D > 15%
Detects	J	J
Non-Detects	-	-

F. Blanks

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 For each matrix and each extracted batch, a method blank must be analyzed.

Action

Qualification of sample results due to blank contamination is dependent on the conditions and origin of the blank. No positive sample results are reported unless the concentration of the compound in the sample exceeds five times the amount in the blank. No sample results are corrected by subtracting blank values. Specific qualifications of sample data are as follows:

Step 1 - Review Form IV, or laboratory equivalent, within the data package to ensure that criteria III.D.1.2 is in compliance. If they are not, the laboratory will be contacted by the reviewer for a written explanation.

Step 2 - Review Form I for all blanks within the data package.

Step 3 - When any compound is detected in the sample and the sample concentration is less than five times the concentration detected in the associated blank, the data are qualified as non-detect (U).

Step 4 - If a compound is found in the blank but not in the sample, then the data are not qualified.

Note: Any difference between the sample analyses and the related blank analyses which involve weights, volumes, or dilution factors, must be taken into account when the 5-times criteria is applied.

The following are examples of how qualifications apply to blank data:

Example 1 (Step 3): When the sample result is greater than the PQL but less than the action level, the sample results are qualified as non-detects. As in the example below, the sample result is less than the blank action level (or 5 x 1); therefore, the sample result is qualified as non-detect.

Factor	5-times
Blank Result	1.0
PQL	0.5
Action Level	5.0
Sample Result	4.0
Qualified Sample Result	4.0 U

Example 2 (Step 4): When the sample result is greater than the blank action level, the sample result is not qualified. As in the example below, the sample result is greater than the blank actin level and the sample result is not qualified.

Factor	5-times
Blank Result	1.0
PQL	0.5
Action Level	5.0
Sample Result	6.0
Qualified Sample Result	6.0

Step 5 - When excessive amounts of contamination exist (i.e., saturated peaks by ECD), all compounds affected are qualified as unusable (R).

G. Surrogate Recovery

Criteria

Sample and blank surrogate recoveries (TCMX and DCB for PCB/pesticides, or 2,4-DB and DCAA for herbicides) must be within the control limits listed in Table 5 of the FSP/QAPP.

Action

Qualification of the data due to surrogate recoveries being out of control is based on the evaluation of all data provided in the data package, especially considering the complexity of the effect of sample matrices. These qualifications are completed in the following steps:

Step 1 - Surrogate recoveries tabulated on Form II, or laboratory equivalent, for each fraction are evaluated against the control limits provided in Table 5 of the FSP/QAPP.

Note: Steps 2 through 5 apply to pesticides and PCBs only.

Step 2 - If both TCMX and DCB recoveries are less than the lower control limit, all positive results are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment B-2).

Step 3 - If both TCMX and DCB recoveries are less than the lower control limit but greater than 10%, all non-detected results are qualified as estimated (UJ).

Step 4 - In both TCMX or DCB recoveries are less than 10%, the non-detected results are qualified as unusable (R).

Step 5 - If both TCMX and DCB recoveries are greater than the upper control limit, all positive results are qualified as estimated (J).

Step 6 - If the surrogate for herbicide analysis recovery is less than the lower limit, all positive results are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) re-analyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC) and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment B-2).

Step 7 - If the surrogate for herbicide analysis recovery is less than the lower limit and greater than 10%, all non-detected results are qualified as estimated (UJ).

Step 8 - In the case where the herbicide surrogate is less than 10%, the data are qualified as unusable (R).

Step 9 - If the herbicide surrogate recovery is greater than the upper control limit all positive results are qualified as estimated (J).

Qualification of Compounds Based on Surrogate Recovery Deviations

Sample Results	Recovery < 10%	10% ≤ %Recovery < LL	Lower QC Limit ≤ Recovery ≤ UL	Recovery > UL
Detects	JC	JC	-	J
Non-Detects	R	ND()J	-	-

LL- Lower limit of method QC acceptance criteria.
UL- Upper limit of method QC acceptance criteria.

H. Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

Criteria

1.0 Spike recoveries must be within the control limits in Table 5 of the FSP/QAPP.

1.1 The RPD values between MS and MSD recoveries must be within the control limits specified in Table 5.

Action

If recovery results are not within the control limits, the following steps are taken to qualify the data:

Step 1 - If the recovery results are greater than the lower control limits presented in Table 5, the positive results for the compound are qualified as estimated (J)

Step 2 - If the recovery result is less than the lower control limit presented in Table 5, the positive results for the compound are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) re-analyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary.

Step 3 - If the recovery result is less than 10%, the non-detects for that compound in the unspiked sample are qualified as rejected (R). This is the only instance that a non-detect is qualified due to recovery results being out of control.

Step 4 - If any of the RPD values are greater than the limits presented in Table 5, positive results for that compound are qualified as estimated (J) in the unspiked sample.

Qualification of Compounds Based on MS/MSD Recovery and MS/MSD RPD Deviations

Sample Results	Recovery < 10%	10% ≤ %Recovery < Lower QC Limit	Lower QC Limit ≤ Recovery ≤ Upper QC Limit	Recovery > Upper QC Limit	RPD > QC Limit
Detects	JC	JC	-	J	J
Non-Detects	R	-	-	-	-

I. Field Duplicates

Criteria

1.0 For water matrices, each compound with a detectable concentration two times greater than the PQL must have an RPD value that is less than 30%.

1.1 For soil matrices, each compound with a detectable concentration two times greater than the PQL must have an RPD value that is less than 50%.

Action

Step 1 - Calculate all RPD values for positive results between the sample and the field duplicate.

$$\text{Calculation: RPD} = \frac{\text{Sample Result - Field Duplicate}}{(\text{Sample Result + Field Duplicate})/2} \times 100$$

Step 2 - If the RPD value is greater than 30% in a water matrix and both sample results are greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Step 3 - If the RPD value is greater than 50% in a soil matrix and both sample results are greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Step 4 - If the both sample results are less than two times the PQL, qualification of the sample data is not required.

Step 5 - If the one sample result is less than two times the PQL and the other is greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Qualification Data Based on Field Duplicate RPD Deviations

RPD	Aqueous > 30% Non-Aqueous > 50%	Aqueous > 30% Non-Aqueous > 50%	Aqueous > 30% Non-Aqueous > 50%
Sample Results	Both duplicate sample concs. $\geq$ 2 times PQL	PQL $\leq$ both duplicate samples concs. < 2 times PQL and $\geq$ PQL	One sample conc. $\geq$ 2 times PQL and other sample conc. < 2 times PQL
Detects	J	-	J
Non-Detects	-	-	-

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results. The compound identification, instrument performance, quantitation, and detection limits are also evaluated.

A. Compound Quantitation and Reported Quantitation Limits

Criteria

The quantitation of detected compounds and the adjustment of the PQL for dilutions and percent solids, must be recalculated for 10% of the data.

Action

Step 1 - If the criteria above have not been followed, the laboratory will be contacted by the reviewer and the laboratory will be responsible for a correction of the quantitation and resubmission of the reported data.

Step 2 - Quantitation limits affected by large, off-scale peaks are qualified as unusable (R).

Step 3 - If the interference is on-scale, the quantitation limit is qualified as estimated (J).

B. Instrument Performance

Criteria

The laboratory must report retention time window data on the pesticide/PCBs standards summary (Form X Pest-1 or Form X Pest-2) or laboratory equivalent for each GC column used to analyze samples. Compounds must be within these retention time windows.

Action

Retention time windows are used in qualitative identification. If the sample results are not within the retention time windows, the following steps are taken to evaluate the data:

Step 1 - The chromatogram is reviewed to see if there are any peaks within an expanded window surrounding the expected retention time window of the compound of interest.

Step 2 - If there are no peaks present either within or close to the retention time window of the out of control targeted compound, then there is no qualification of the data. Non-detected results are considered valid.

Step 3 - If there are peaks present above or close to the PQL and either within or close to the retention time window of the out of control targeted compound, all positive data are qualified as unusable (R).

C. Compound Identification

Criteria

Reported compounds must be within calculated retention time windows for both chromatographic columns.

Action

The following steps are taken during the compound identification:

Step 1 - When the qualitative criteria for two-column confirmation are not met, all reported positive detects are reported as non-detects. The reviewer uses professional judgment and the following steps to report the appropriate quantitation limit:

a. If the misidentified peak was sufficiently outside the target compound retention time window, then the PQL is reported.

b. If the misidentified peak poses an interference with potential detection of a target peak, the reported value is qualified as the estimated (J) quantitation limit.

Step 2 - When PCBs or multi-peak pesticides exhibit marginal pattern-matching quality, the reviewer's professional judgment is used to confirm whether the differences are credited to environmental "weathering." If the presence of a PCB/multi-peak pesticide is strongly suggested, results are reported as being present.

Step 3 - When an observed pattern closely matches more than one Aroclor, professional judgment is used to decide whether the neighboring Aroclor is a better match, or if multiple Aroclors are present.

Validation Annex C

Data Validation Procedures for Inorganic Analytes

Validation Annex C

Data Validation Procedures for Inorganic Analytes

I. Introduction

This Standard Operating Procedure (SOP) describes the data validation procedures for a United States Environmental Protection Agency (EPA) Region I tiered review of the data for inorganic analytes by EPA Methods 5000, 6000, and 9000 series. Data review procedures presented in this SOP were developed from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines,* USEPA Region I, July 1, 1993.
- *Region I Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analyses*, USEPA Region I, June 13, 1988 (Modified February 1989).
- *Evaluation of Metals Data for the Contract Laboratory Program,* USEPA SOP HW-2, Revision 11, January 1992.
- *USEPA Contract Laboratory Program, Statement of Work for the Inorganics Analysis, Revision OLM0.1.9,* July 1993.

II. EPA Region I Tiered Validation Procedures

All inorganic analytical data will be validated to a Tier I level following the procedures presented in the *Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses* (July 1996, revised December 1996) and the *Region I Tiered Organic and Inorganic Data Validation Guidelines* (USEPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this FSP/QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors.) Based on this modified Tier I review, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate Relative Percent Difference (RPD) compliance. Additional Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of a minimum of 25% of the data, and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. A data validation summary spreadsheet (in the form presented in Attachment C-1) is prepared to document the data review. The following steps are taken to complete a Tier I validation:

Step 1 - Review the laboratory case narrative. During review, if there are any deviations that warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all forms presented are present and complete. If any of the required forms are not in the data package, contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be conducted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data is provided for each sample and associated QA/QC samples in the data package. Contact the laboratory to obtain missing data (if required):

- Case Narrative
- Chain-of-Custody Forms
- Traffic Reports
- QA Sample Summary Forms
- Instrument Calibration Summary Forms
- Instrument Run Logs
- Sample Preparation Logs
- Instrument/Method Detection Limits
- Standards Preparation Logs
- Supporting (raw) Data

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to the steps discussed above, the Tier I review of data packages for projects subject to this FSP/QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

IV. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review, plus review of the data package summary forms for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. Sample qualification is performed (if required) following EPA Region I Guidelines presented in Section I.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly recorded on the data summary package Form I, or laboratory equivalent, with a blue ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on Form I. Below is a list of qualifiers that may be used.

J The compound was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL). (When this qualifier is used in combination with the letter C -- i.e., JC -- that indicates that the sample result is an estimated concentration due to certain QC deficiencies and that a bias-corrected result is available, as discussed further below.)

U The compound was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution and (for solid samples only) percent moisture. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL), as presented in Attachment C-1.

UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) J, as presented in Attachment C-1.

R Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B. Holding Times

Criteria

The holding times presented in Table 1 of the FSP/QAPP for the inorganic analysis must not be exceeded.

Action

The following steps are performed to review holding times for Tier II validation:

Step 1 - Establish the holding time by comparing the sampling date on the chain-of-custody with the dates of analysis and/or digestion on Form I. The chain-of-custody is also reviewed to determine if the samples were properly preserved.

Step 2 - If the holding times are exceeded by less than 24 hours, no qualification of data is needed.

Step 3 - If the holding times are exceeded by more than 24 hours but less than 14 days, all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 4 - If the holding times are exceeded by more than twice the specified holding time, all associated results are qualified as unusable (R).

C. Percent Moisture Content

Criteria

Soil/sediment/solid sample results must be adjusted for percent solids and must have percent solids greater than 30%.

Action

The following steps are performed by reviewing the sample result summary form during the validation of percent solids data:

Verify that the percent solids of soil/sediment/solid samples are greater than 30%.

a. Soil/sediment/solid sample results with a percent solid of less than 10% are qualified as unusable (R)

b. Positive and non-detected soil/sediment/solid sample results with percent solid results within the range of greater than 10% to less than 30% are qualified as estimated (J) and unusable (R), respectively.

D. Calibration

Criteria

1.0 Instruments must be calibrated daily and each time the instrument is set up for analysis.

1.1 Initial Calibration ICP

A blank and at least one standard must be used in establishing the analytical curve.

1.2 Initial Calibration Atomic Absorption Analysis

A blank and at least three standards must be used in establishing the analytical curve.

1.3 Initial Calibration-Mercury

A blank and at least four standards must be used in establishing the analytical curve.

1.4 Initial Calibration-Cyanide

1.4.1 A blank and at least three standards must be used in establishing the analytical curve.

1.4.2 At least one mid-point standard must be distilled before analysis.

1.5 Initial and Continuing Calibration Verification (ICV and CCV)

1.5.1 A certified standard must be used for the initial Calibration Verification (ICV) and must be analyzed for each wavelength used for analysis.

1.5.2 All percent recoveries of the ICVs and CCVs for all the analytes must be within 90 to 110%, except for mercury and cyanide.

1.5.3 All percent recoveries of all the ICVs and CCVs for mercury must be within 80 to 120%.

1.5.4 All percent recoveries of all the ICVs and CCVs for cyanide must be within 85 to 115%.

1.5.5 A CCV must be analyzed every 10 samples or every 2 hours, whichever is more frequent.

1.5.6 To verify linearity near the contract required detection limit (CRDL) for ICP analysis, a standard with a concentration that is two times the CRDL or two times the IDL (whichever is greater) must be analyzed. The recoveries for the CRDL standards must be within the limits of 80 to 120%.

Action

The following steps are performed to review inorganic calibration for Tier II validation:

Step 1 - Verify that the instrument was calibrated daily and every time it was set up by reviewing Form XIV, or laboratory equivalent. Also, verify that the correct number of standards were used for the initial calibration for each analyte reported. If any of these are not completed by the laboratory, the data are qualified as unusable (R).

Step 2 - Verify that a mid-range standard was distilled by reviewing Form XIII, or laboratory equivalent. If a mid-range standard for cyanide was not distilled or did not meet the 85 to 115% criteria, all positive and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 3 - Review Form II (Part 1), or laboratory equivalent, for the identification of the source of the ICV and CCV. If they are not from different sources, all positive and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 4 - ICV and CCV percent recovery Form II (Part 1), or laboratory equivalent, are reviewed against the above mentioned criteria. If the ICV or CCV percent recoveries are outside the acceptance criteria, the following steps are taken to qualify the data:

a. If the ICV and CCV percent recoveries are not within the control limits but are within the ranges of 75-89%, or 111-125% (CN, 70-84% or 116-130%; Hg, 65-79% or 121-135%), all results greater than the IDL are qualified as estimated (J).

b. If the ICV and CCV percent recoveries are not within the control limits but are within the ranges of 111-125 % (CN, 116-130%; Hg, (121-135%), all non-detected results are not qualified.

c. If the ICV and CCV percent recovery are not within the control limits, but are within the ranges of 75 to 89% (CN, 70 to 84%; Hg, 65 to 79%), all non-detected results are qualified as estimated (UJ).

d. If the ICV and CCV percent recoveries are not within the control limit ranges of 75 to 89% (CN, 70 to 84%; Hg, 65 to 79%), all non-detected results are qualified as unusable (R).

Step 5 - Form XIV, or laboratory equivalent, is reviewed to verify that the CCVs were analyzed in the required intervals. If they were not analyzed at the required intervals, all positive and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 6 - Form II (Part 2), or laboratory equivalent, is reviewed to verify that the CRDL standards are within the required control limits of +/-20% of the true value. If the CRDL standard for ICP is not within +/-20% of the true value, positive results less than 3 times the CRDL and non-detects are qualified as estimated (J) and (UJ), respectively.

E. Blanks

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 For each matrix, for every 20 samples digested, or for each batch digested, a preparation blank must be analyzed.

1.2 A calibration blank must be analyzed after every 10 samples or every 2 hours, whichever is more frequent.

Action

Qualification of sample results due to blank contamination is dependent on the conditions and origin of the blank. No positive sample results are reported unless the concentration of the compound in the sample exceeds five times the amount in the blank. No sample results are corrected by subtracting blank values. Specific qualifications of sample data are as follows:

Step 1 - Review Form III, or laboratory equivalent, for all blanks within the data package.

Step 2 - If a blank result if greater than two times the negative IDL, all non-detects are qualified as estimated (UJ).

Step 3 - If an analyte is found in the blank but not in the sample, then the data are not qualified.

Step 4 - When an analyte is detected in the sample and the sample concentration is less than five times the concentration detected in the associated blank, the data are qualified as non-detected (U).

Step 5 - When a positive result is greater than the action level, the result is not qualified.

Note: Any difference between the sample analyses and the related blank analyses which involve weights, volumes, or dilution factors, must be taken into account when the 5-times criteria is applied.

The following are examples of how qualifications apply to blank data:

Example 1 (Step 4): When the sample result is less than the IDL but greater than the action level, positive results less than the action level are qualified as non-detect.

Factor	5-times
Blank Result	7
PQL	5
Action Level	35
Sample Result	22
Qualified Sample Result	22 U

Example 2 (Step 5): When the sample result is greater than the IDL and the action level, no qualification is used.

Factor	5-times
Blank Result	10
PQL	8
Action Level	50
Sample Result	70
Qualified Sample Result	70

F. ICP Interference Check Sample (ICS)

Criteria

1.0 The ICS must be analyzed at the beginning and the end of each sample analysis run or a minimum of twice per 8-hour working shift, whichever is more frequent.

1.1 The percent recovery for the ICS solution AB must be within the control limits of +/- 20% of the true value.

Note: Interferant Element Concentration Used for ICP Interference Check Sample

Element	Concentration (mg/L)
Al	500
Ca	500
Fe	200
Mg	500

Action

The following steps are performed to review the ICS for Tier II validation:

Step 1 - Review Form XIV, or laboratory equivalent, to ensure the ICS is analyzed at the proper frequency. If the ICS is not analyzed at the correct frequency, detect and non-detected sample results are qualified as estimated (J) and (UJ), respectively.

Step 2 - Verify on the ICS recovery Form IV, or laboratory equivalent, that the percent recovery results for the ICS solution AB are within the control limits of 80 to 120%. Also review Form I for concentrations of As, Ca, Mg, and Fe to confirm that they are a minimum of 50% of their respective levels in the ICS. The following steps are taken in reviewing the data:

a. If the ICS recovery for an element is greater than 120% and the reported sample results are non-detect, no qualification of the data is needed.

b. If the ICS recovery for an element is greater than 120% and the reported sample results are greater than the IDL, the affected data are qualified as an estimate (J).

c. If the ICS recovery for an element is between 50 and 79% and the reported results are greater than the IDL, the affected data are qualified as an estimate (J).

d. If the ICS recovery for an element is between 50 and 79% and the reported results are non-detected, the affected data are qualified as an estimate (UJ).

e. If the ICS recovery for an element is less than 50%, the sample results are qualified as unusable (R).

Step 3 - When sample results greater than the IDL are reported for elements which are not present in the ICS solution, there is the possibility of false positives. Sample results greater than two times the IDL with levels of interferents that are 50% or more of the levels found in the ICS solution are qualified as estimated (J).

Step 4 - When negative sample results with an absolute value greater than two times the IDL are reported for elements which are not present in the ICS solution, there is the possibility of false negatives. When the levels of interferents for these samples are 50% or more of the levels found in the ICS solution, the sample results are qualified as estimated (UJ).

G. Matrix Spike (MS) Sample Analysis

Criteria

1.0 Samples identified as field blanks cannot be used for spiked sample analysis.

1.1 Spike recoveries must be within the control limits of 75 to 125%. However, the control limits do not apply when the sample concentration surpasses the spike concentration by a factor of four or more.

1.2 If the MS recovery does not meet criteria, a post-digestion spike is required and reported on Form 5B, or laboratory equivalent, for ICP, Flame, Mercury, and Cyanide. Post-digestion spikes are also required for all furnace analyses, but recoveries are reported on the raw data and are reviewed in a Tier III evaluation.

Action

The following steps are performed to review inorganic MS analysis for Tier II validation:

Step 1 - MS recoveries are reviewed on Form V (Part 1), or laboratory equivalent. If they are out of the control limits of 75 to 125% the following steps are taken:

a. When the spike recovery is greater than 125% and the reported sample results are non-detected, no qualification of data is needed.

b. When the spike recovery is greater than 125% and the reported sample results are greater than the IDL, the data are qualified as estimated (J).

c. When the spike recovery is less than 75% and the reported sample results are greater than the IDL, detected results are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC) and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment C-2).

d. If the spike recovery is within the range of 30 to 74% and the sample results are non-detected, the data are qualified as estimated (UJ).

e. If the spike recovery is less than 30% and the sample results are non-detected, the data are qualified as unusable (R).

H. Duplicate Sample Analysis

Criteria

1.0 Samples identified as field blanks cannot be used for duplicate sample analysis.

1.1 Control limit of $\leq$ 20% for waters and $\leq$ 35% for soils for the RPD are used for sample results greater than five times the PQL as presented in Table 5 of the FSP/QAPP.

1.2 Control limit of $\leq$ the PQL for waters and $\leq$ 2 times the PQL for soils are used for sample values less than five times the PQL, including when only one sample value is greater than five times the PQL or when one sample is above the IDL and one is non-detected.

1.3 Duplicate sample analysis must be prepared and analyzed for every 20 samples, for every batch digested, or for every matrix, which ever is more frequent.

Action

Verify on Form V (Part 2), or laboratory equivalent, that the RPD for the duplicate samples analysis is within the above mentioned criteria. If duplicate analysis results are outside the appropriate control windows, all sample results greater than the IDL for that analyte and the same matrix are qualified as estimated (J).

I. Field Duplicates

Criteria

1.0 For sample values greater than 5 times the PQL, control limits for the RPD for water matrices is $\leq$ 30% and $\leq$ 50% for soils matrices.

1.1 For sample values less than 5 times the PQL, the control limits of $\leq$ 2 times the PQL for waters and $\leq$ 4 times the PQL for soils will be used.

Action

Step 1 - Calculate all the RPD values for positive results between the sample and the field duplicate.

$$\text{Calculation: } RPD = \frac{\text{Sample Result - Field Duplicate}}{(\text{Sample Result + Field Duplicate})/2} \times 100$$

Step 2 - If duplicate analysis results are outside the appropriate control limits, all sample results greater than the IDL for that analyte and the same matrix are qualified as estimated (J).

J. Laboratory Control Sample Analysis (LCS)

Criteria

1.0 Aqueous LCS results must fall within the control limits of 80 to 120%. For validation of the data the +/-20% limit will also apply to both antimony and silver.

1.1 Solid LCS results must fall within the control limits established by the laboratory as presented on Form VII or the laboratory equivalent.

1.2 LCS must be prepared and analyzed for every 20 samples, for every batch digested, or for every matrix, whichever is more frequent.

Action

2.0 The following steps are taken to evaluate the aqueous LCS:

Step 1 - Review the Form VII or the laboratory equivalent for any analyte that is outside the control limits of 80 to 120%.

Step 2 - If the LCS recovery for any analyte is greater than 120%, results greater than the IDL are qualified as estimated (J).

Step 3 - If the LCS recovery for any analyte is less than the lower control limit of 80%, sample results greater than the IDL are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

Step 4 - If the sample results are non-detects and the LCS recovery is greater than 120%, no qualification of the data is performed.

Step 5 - If the sample results are non-detected and the LCS recoveries are within the control limits of 50 to 79%, the data are qualified as estimated (UJ).

Step 6 - If the LCS recoveries for any analyte are less than 50%, the data for that analyte are qualified as unusable (R).

2.1 The following steps are taken to evaluate the soil LCS:

Step 1 - Review the Form VII, or laboratory equivalent, to identify any analyte that is outside the control limits established by the laboratory.

Step 2 - If any solid LCS recoveries for any analyte are greater than the upper control limit established by the laboratory, all results greater than the IDL are qualified as estimated (J).

Step 3 - If any solid LCS recoveries for any analyte are less than the lower laboratory established control limits, sample results greater than the IDL are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC) and the bias-corrected result will be presented in the "Notes" field of the Analytical Data Validation Summary (Attachment C-2).

Step 4 - If the LCS results are greater than the upper control limits and the sample results are non-detected, no qualification of the data is needed.

Step 5 - If the LCS results are less than the lower control limits and the sample results are non-detected, the data are qualified as estimated (UJ).

K. ICP Serial Dilution Analysis

Criteria

1.0 If the analyte concentration is sufficiently high (concentration in the original sample is at a minimum a factor of 50 times the IDL) the laboratory is required to report the results of a five-fold dilution. Results that do not agree within 10% of the original results are qualified with an "E" by the laboratory. For the purposes of validation the criterion is 15%.

1.1 A serial dilution is required for each matrix analyzed.

1.2 If the sample used for the serial dilution had to be diluted for any elements to bring the result within the linear range of the instrument, another five-fold dilution is required for the evaluation of matrix interferences for that specific element.

Action

The following steps are performed to review ICP serial dilution for Tier II validation:

Step 1 - Review the ICP serial dilution results on Form IX or the laboratory equivalent. If the percent difference between the results is greater than 15% and the serial dilution results are greater than the initial sample results, the detected and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 2 - If there is evidence of a negative interference, all positive sample results are qualified as estimated (J).

L. Detection Limits

Criteria

1.1 IDLs must be less than the PQL for all analytes.

1.2 ICP or other methods may be used that do not have IDLs that are less than the PQLs only if all the sample results are greater than 5 times the IDL for that instrument.

1.3 IDLs must be multiplied by the dilution factors and preparation factors before being reported on Form I, or laboratory equivalent.

Action

The following steps are taken when verifying detection limits for Tier II validation:

Step 1 - On the Form I, or laboratory equivalent, correct any sample results that are not reported to the IDL or do not use the correct dilution/preparation factors.

Step 2 - Any positive or non-detected results for As, Tl, Se, or Pb analyzed by ICP that are not greater than 5 times the IDL are qualified as estimated (J).

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results. Furnace atomic absorption analysis and calibration raw data are also reviewed.

A. Calibration

Criteria

1.0 The initial calibration for atomic absorption analysis must contain three standards, one of which must be at the PQL.

1.1 The correlation coefficient must be greater than or equal to 0.995 for the calibration of atomic absorption, mercury, and cyanide or other photometric determinations.

Action

The following steps are taken when verifying inorganic calibration for Tier III validation:

Step 1 - Review the calibration raw data and Form XIII, or laboratory equivalent, to confirm that the curve for the analysis did include a standard at the PQL. If there is not a standard at the PQL, all positive sample results up to two times the PQL and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 2 - Evaluate the raw data of atomic absorption, mercury, and cyanide or other photometric determination and calculate the correlation coefficient. If the correlation coefficient is less than 0.995, then all results greater than the IDL and non-detects are qualified as estimated (J) and (UJ), respectively.

B. Furnace Atomic Absorption

Criteria

1.0 For sample concentrations greater than the PQL, duplicate injections must agree within +/- 20% RSD, or Coefficient of Variation (CV), otherwise the sample must be reanalyzed once (two additional injections).

1.1 Spike recoveries must be within the control limits of 85 to 115%.

1.2 If the post-digestion spike recovery is not within the control limits of 85 to 115% and the sample absorbance is greater than 50% of the spike absorbance, the Method of Standard Additions is required. The sample must be spiked at 50, 100, and 150% of the sample absorbance.

Action

The following steps are taken when reviewing the Furnace Atomic Absorption data:

Step 1 - Review the duplicate injection values for RSD or CV. If they are outside the required criteria specified in Section IV.A.1.0 and the sample was not reanalyzed once as required, all positive results are qualified as estimated (J).

Step 2 - Review the spike recoveries. If they are outside the required criteria mentioned in section IV.A.1.1, all positive results are qualified as estimated (J).

Step 3 - Review the sample absorbance of the post-digestion spike and if the spike absorbance is greater than 50% the data are qualified as follows:

a. If the furnace post-digestion spike recovery is not within 85 to 115% and the sample result is greater than the IDL, then the data are qualified as estimated (J).

b. If the sample result is non-detected and the furnace post-digestion spike recovery is greater than 10% but less than 85%, then the data are qualified as estimated (UJ).

c. If the furnace post-digestion spike recovery is less than 10%, then positive and non-detected results are qualified as unusable (R).

Step 4 - If the Method of Standard Additions (MSA) is required, but was not performed, then the positive sample results are qualified as estimated (J).

Step 5 - If any samples analyzed by MSA were not spiked at the correct levels, then the positive sample results are qualified as estimated (J).

Step 6 - If the MSA correlation coefficient is less than 0.995, then the positive sample results are qualified as estimated (J).

C. Sample Result Verification

Criteria

The quantitation of the analytes and the adjustment of the PQL for dilution and percent solids, must be recalculated for 10% of the data.

Action

If the criteria above have not been followed, then the laboratory will be contacted by the reviewer and the laboratory will be responsible for resolving any discrepancies and resubmission of results, if needed.

Validation Annex D

Data Validation Procedures for Polychlorinated Dibenzo-p-Dioxins (PCDDs)/ Polychlorinated Dibenzofurans (PCDFs)

Validation Annex D

Data Validation Procedures for Polychlorinated Dibenzo-p-Dioxins (PCDDs)/Polychlorinated Dibenzofurans (PCDFs)

I. Introduction

This standard operating procedure (SOP) describes the data validation procedures for an EPA Region I tiered review of the data for polychlorinated dibenzo-p-dioxins (PCDDs) and polychlorinated dibenzofurans (PCDFs) analyzed by EPA Method 8280 or 8290. Data review procedures presented in this SOP are from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines*, EPA Region I, July 1, 1993.
- *The Analysis of Polychlorinated Dibenzo-p-dioxins and Polychlorinated Dibenzofurans by High Resolution Gas Chromatography/High Resolution Mass Spectrometry (HRGC/HRMS),* EPA Method 8290.
- *National Functional Guidelines for Dioxin/Furans Data Validation, Draft Revision DFLM01.1*, January, 1996
- *EPA Contract Laboratory Program, Statement of Work for the Analysis of PCDDs/PCDFs, Revision DFLM01.1*, September 1991

II. EPA Region I Tiered Validation Procedures

All PCDD/PCDF analytical data will be validated to a Tier I level following the procedures presented in the *Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses* (July 1996, revised December 1996) and the *Region I Tiered Organic and Inorganic Data Validation Guidelines* (EPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors.) Based on this modified Tier I review, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate Relative Percent Difference (RPD) compliance. Additional Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of 25% of the data, and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. A data validation summary spreadsheet (in the form presented in Attachment D-1) is prepared to document the data review. The following steps are taken to complete a Tier I validation:

Step 1 - Review the laboratory case narrative. During review of the case narrative, if any deviations warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all forms are present and complete. If any of the forms are not in the data package contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be warranted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data is provided for each sample and associated QA/QC samples in the data package. Contact the laboratory to obtain missing data:

- Case Narrative
- Chain-of-Custody Forms
- Traffic Reports
- QA Sample Summary Forms
- Instrument Calibration Summary Forms
- Instrument Run Logs
- Sample Preparation Logs
- Instrument/Method Detection Limits
- Standards Preparation Logs
- Supporting (raw) Data

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to these steps, as discussed above, the Tier I review of data packages for projects subject to this QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

IV. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review plus review of the data package for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. Sample qualification is performed (if required) following EPA Guidelines.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly marked on a copy of Form I's, or laboratory equivalent, with a blue ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on Form I. Below is a list of qualifiers to be used.

J The compound or analyte was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL). (When this qualifier is used in combination with the letter C -- i.e., JC -- that indicates that the sample result is an estimated concentration due to certain QC deficiencies and that a bias-corrected result is available, as discussed further below.)

U The compound or analyte was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution and (for solid samples only) percent moisture. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) as presented in Attachment D-1.

UJ The compound or analyte was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) J as presented in Attachment D-1.

R Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B The compound or analyte was positively identified in the sample as well as in the associated blank sample. The detected sample concentration may be due in part or whole to contamination that occurred during sample handling and preparation.

B. Holding Times

Criteria

Samples (waters or soils) and extracts must be preserved at 4° centigrade. Specific holding times for each analysis and sample type are presented in Table 8-2 of the QAPP.

Action

The following steps are performed for the validation of data due to holding times:

Step 1 - Establish the holding time by comparing the sampling date on the chain-of-custody form with the dates of analysis and/or extraction on Form I. The chain-of-custody form is also reviewed to determine if the samples were properly preserved.

Step 2 - If the holding times are exceeded by less than 24 hours, then no qualification of data is needed.

Step 3 - If the holding times are exceeded by more than 24 hours but less than 14 days, all detected results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 4 - If the holding times are exceeded by more than twice the specified holding time, then all the results are qualified as unusable (R).

C. Percent Moisture Content

Criteria

Soil/sediment/solid sample results must be adjusted for percent solids, and must have percent solids greater than 30%.

Action

The following steps are performed by reviewing the sample result summary form during the validation of percent solids data:

Verify that the percent solids of soil/sediment/solid samples are greater than 30%.

a. Soil/sediment/solid sample results with a percent solids of less than 10% are qualified as unusable (R).

b. Detected and non-detected soil/sediment/solid sample results with percent solids within the range of greater than 10% to less than 30% are qualified as estimated (J) and unusable (R), respectively.

D. Window Defining Mix (WDM)

Criteria

The WDM must be analyzed at the following frequency:

1.0 Before an initial calibration on each instrument and GC column used for analysis.

1.1 Each time adjustments or instrument maintenance activities are performed that may affect retention times.

1.2 Any time retention times of either the $^{13}C_{12}$-1234-TCDD or $^{13}C_{12}$-123789-HxCDD recovery standards in any analysis vary by more than 10 seconds from its retention time in the most recent continuing calibration standard.

Action

The following steps are performed to review WDM for Tier II validation:

Step 1 - Review Form V PCDD-3, or laboratory equivalent, and verify the WDM was analyzed at the correct frequency.

Step 2 - If the WDM was not analyzed at the mandated frequency, yet the calibration standards meet the specifications, the data are not qualified. If the initial and continuing calibration meet the specified criteria, it is assumed that this deviation has not affected the data.

E. Chromatographic Resolution

Criteria

The resolution criteria must be evaluated using measurements made on the Selected Ion Current Profile (SICP) for the appropriate ions for each isomer.

1.0 For analyses on a DB-5 (or equivalent) GC column, the chromatographic resolution is evaluated by the analysis of the CC3 standard during both the initial and the continuing calibration procedures.

1.1 The isomers $^{13}C_{12}$-2378-TCDD and $^{13}C_{12}$-1234-TCDD chromatographic peak separation must be resolved with a valley less than or equal to 25%.

1.2 The isomers 123478-HxCDD and 123678-HxCDD chromatographic peak separation must be resolved with a valley less than or equal to 50%.

1.3 For analyses on an SP-2331 (or equivalent) GC column, the chromatographic resolution is evaluated before the analysis of any calibration standards by the analysis of a commercially available standard.

1.4 The isomers 1478-TCDD and 2378-TCDD chromatographic peak separation must be resolved with a valley less than or equal to 25%.

1.5 The isomers 2378-TCDD and (1237/1238)-TCDD chromatographic peak separation must be resolved with a valley less than or equal to 25%.

Action

The following steps are performed in evaluating chromatographic resolution for Tier II validation:

Step 1 - Review Form V PCDD-2, or laboratory equivalent, to verify that the percent valley criterion has been met.

Step 2 - If the resolution criteria for TCDD are not met, all positive results for Tetras, Pentas, and Hexas (both dioxin and furan) are qualified as estimated (J). No qualification is needed for non-detected results.

Step 3 - If the resolution criteria for HxCDD are not met, all positive results for Hexas (both dioxin and furan) are qualified as estimated (J). No qualification is needed for non-detected results.

F. GC/MS Initial Calibration

Criteria

1.0 Before any sample analysis is conducted, a five-point calibration must be performed.

1.1 All PCDD/PCDF peaks, including the labeled internal and recovery standards, in all solutions must meet the +/- 15% theoretical abundance ratio criteria, listed on Form VI PCDD-2, or laboratory equivalent.

1.2 The percent Relative Standard deviation (%RSD) calculated from the five Relative Response Factors (RRFs) for the unlabeled and labeled PCDDs/PCDFs must not be greater than 15%.

Action

The following steps are performed in evaluating the initial calibration for Tier II validation:

Step 1 - Review Form VI PCDD-1 and Form VI PCDD-2, or laboratory equivalents, to verify that the initial calibration criteria mentioned above has been satisfied.

Step 2 - If there was no five-point calibration preceding sample analysis, then all the results are rejected (R).

Step 3 - Review Form VI PCDD-2, or laboratory equivalent, to determine if any labeled or unlabeled isomer is outside the ion abundance ratio, theoretical window.

a. If the ion ratio falls between 16 and 20%, all non-detected results associated with that initial calibration are qualified as estimated (UJ).

b. If the ion ratio is greater than +/- 20%, all non-detected results associated with that initial calibration are qualified as unusable (R).

Step 4 - Review Form VI PCDD-1, or laboratory equivalent, to determine if the %RSD criterion has not been met:

a. If the %RSD is greater than 20%, but less than 30%, detected and non-detected sample results are qualified as estimated (J) and (UJ), respectively.

b. If the %RSD is greater than 30%, detected and non-detected results are rejected (R).

G. GC/MS Continuing Calibration

Criteria

1.0 The continuing calibration standard should be analyzed at the beginning of each 12-hour period.

1.1 All PCDD/PCDF peaks, including the labeled internal and recovery standards, in all solutions must meet the +/- 15% theoretical abundance ratio criteria, listed on Form VII PCDD-1, or laboratory equivalent.

1.2 The measured RRF of each analyte and internal standard in the continuing calibration standard must be within +/- 30% of the mean RRF from the initial calibration.

Action

The following steps are performed in evaluating the initial calibration for Tier II validation:

Step 1 - Review Form VII PCDD-1 and Form VII PCDD-2, or laboratory equivalents, to verify that the continuing calibration criteria mentioned above has been satisfied.

Step 2 - Verify that continuing calibrations were analyzed at the required frequency by reviewing Form V PCDD-3, or laboratory equivalent.

Step 3 - If any analyte(s) failed the ion abundance ratio for the continuing calibration standard, all non-detected results are qualified as rejected (R) and all detected results are qualified as estimated (J).

Step 4 - Review Form VII PCDD-1, or laboratory equivalent, to determine if the percent difference (%D) criterion has not been met.

a. If the %D is between 30 and 50%, detected and non-detected sample results are qualified as estimated (J) and (UJ), respectively.

b. If the %D is greater than 50%, all detected and non-detected results are qualified as rejected (R).

H. Method Blank Analysis

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 A method blank must be analyzed for each GC/MS system used to analyze that specific group or set of samples.

1.2 Internal standard recovery must be between 25 to 150%.

Action

The following steps are performed in evaluating the method blank analysis for Tier II validation:

Step 1 - Review Forms I and IV PCDD or laboratory equivalent and verify that blanks were analyzed at the appropriate frequency described above and that the blanks were free of contamination.

Step 2 - If a target compound is found in the blank, but not in the sample, no qualification of the data is performed.

Step 3 - Any compound that is detected in the sample (except OCDD and OCDF) and in the related method blank, is qualified with a “B” if the sample concentration is less than the five times the blank concentration. OCDD and OCDF are qualified with a “B” when the sample result is less than 10 times the blank concentration.

Step 4 - When the blank analysis involves internal standard recoveries out of control, the related sample data are reviewed and qualified in the following manner:

a. If the sample data do not contain any internal standards out of control, then the data are not qualified.

b. If the sample data contain internal standards out of control, then all detected and non-detected sample results for compounds quantitated using that internal standard are qualified as estimated (J) and (UJ), respectively.

I. Matrix Spike Analysis

Criteria

1.0 For each SDG, the laboratory must prepare a spiked sample for each matrix and concentration level that occur in the SDG.

1.1 The recovery of each spiked analyte must be between 50-150%.

Action

The following steps are performed in evaluating the matrix spike analysis for Tier II validation:

Step 1 - Review the extraction log and Form V PCDD-3, or laboratory equivalent, verify that matrix spike analysis was analyzed at the appropriate frequency described above. If the frequency was not in compliance, the laboratory will be contacted for a written explanation.

Step 2 - Evaluate Form III PCDD-1, or laboratory equivalent, if the recovery results are not within the control limits, the following steps are taken to qualify the data:

a. If the recovery results are greater than the upper control limit, the detected results for that class of compounds in the unspiked sample are qualified as estimated (J).

b. If the recovery results are below the lower control limit presented in Table 5, the detected results for this compound are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

c. If the recovery is less than 25%, but greater than 10%, the non-detects for that class of compound in the unspiked sample are qualified as estimated (UJ)

d. If the recovery result is less than 10%, the non-detects for that class of compound in the unspiked sample are qualified as rejected (R).

J. Duplicate Analysis

Criteria

1.0 For each SDG, the laboratory must prepare a duplicate sample for each matrix in the SDG.

1.1 The RPD of any detected analyte must be less than or equal to 50%.

Action

The following steps are performed in evaluating the duplicate analysis for Tier II validation:

Step 1 - Review the extraction log and Form V PCDD-3, or laboratory equivalent, verify that duplicate analyses were extracted and analyzed at the appropriate frequency as described above. If the frequency was not in compliance, the laboratory will be contacted for a written explanation.

Step 2 - Evaluate Form IV PCDD-1, or laboratory equivalent, if RPD results are greater than 50%. Qualify all positive sample results for that compound in the SDG as estimated (J).

K. Internal Standard (IS) and Cleanup Standard Recoveries

Criteria

The percent recovery of any IS in the original sample, prior to any dilutions, must be within 25 to 150%. When the percent recovery is not within these control limits, re-extraction and re-analysis of the affected sample is required.

Action

The following steps are performed in evaluating the IS and cleanup standard recoveries analysis for Tier II validation:

Step 1 - Review the extraction log and Form I, or laboratory equivalent, verify that the IS recoveries are within the control limits of 25 to 150%.

Step 2 - If internal standard and/or cleanup standard recoveries are outside the control limits and re-analysis was not completed, the laboratory will be contacted for a written explanation.

Step 3 - If an IS recovery is greater than 150%, then all detected results associated with that internal standard are qualified as estimated (J).

Step 4 - If an internal standard recovery is less than 25%, the detected sample results quantitated using that IS are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

Step 5 - If an internal standard recovery is less than 25%, non-detected sample results associated with that internal standard are qualified as estimated (UJ).

Step 6 - If an internal standard recovery is less than 10%, all non-detected sample results associated with that internal standard are qualified as unusable (R).

L. Sample Dilutions

Criteria

A dilution is required when the concentration of any PCDD/PCDF is greater than the calibration range.

Action

Review Form I PCDD-1, or laboratory equivalent, to determine if any of the sample results are greater than the calibration range, the sample results are qualified as estimated (J).

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results. The Instrument Sensitivity, Initial and Continuing Calibration, Compound identification, Toxicity Equivalency Factor, Column Confirmation, Sample Dilution, Sample Reanalysis, Estimated Detection Limits, Estimated Maximum Possible Concentration, are also reviewed.

A. Instrument Sensitivity

Criteria

The CC1 solution analyzed at the end of the twelve-hour period must meet the following criteria:

1.0 The absolute retention time of the recovery standards, 13C12-1234-TCDD and 13C12-123678-HxCDD, must not change more than 10 seconds between the initial CC3 analysis and the analysis of the CC1 at the end of the sequence.

1.1 All the analytes in the CC1 solution must meet the ion abundance ratio criteria listed below:

Table BB-1

Analyte	Selected Ions	Theoretical Ion Abundance	Control Limits
TCDD	320/322	0.77	0.65 - 0.89
PeCDD	356/358	1.55	1.24 -1.86
HxCDD	390/392	1.24	1.05 - 1.43
HpCDD	424/426	1.04	0.88 - 1.20
OCDD	458/460	0.89	0.76 - 1.02
TCDF	304/306	0.77	0.65 - 0.89

Analyte	Selected Ions	Theoretical Ion Abundance	Control Limits
PeCDF	340/342	1.55	1.24 - 1.86
HxCDF	374/376	1.24	1.05 - 1.43
HpCDF	408/410	1.04	0.88 - 1.20
OCDF	442/444	0.89	0.76 - 1.02
Internal Standards			
$^{13}C_{12}$-1234-TCDD	332/334	0.77	0.65 - 0.89
$_{13}C_{12}$-123678-HxCDD	402/404	1.24	1.05 - 1.43
$^{13}C_{12}$-OCDD	470/472	0.89	0.76 - 1.01
$^{13}C_{12}$-2378-TCDF	316/318	0.77	0.65 - 0.89
$^{13}C_{12}$-1234678-HpCDF	420/422	1.04	0.88 - 1.20
Recovery Standards			
$^{13}C_{12}$-1234-TCDD	332/334	0.77	0.65 - 0.89
$^{13}C_{12}$-123789-HxCDD	402/404	1.24	1.05 - 1.43

1.2 The CC1 solution signal to noise (S/N) ratio of the chromatogram shall be greater than 2.5 for the unlabeled PCDD/PCDF and greater than 10.0 for the labeled internal and recovery standards. The percent recovery of the internal standards should be within the control limits of 25 to 150%.

Action

The following steps are performed in evaluating the instrument sensitivity for Tier III validation:

Step 1 - Compare the retention time (RT) of the recovery standards from the chromatographs and quantitation reports of CC3 and CC1. If the RT changes more than +/- 10 seconds, samples analyzed since the last acceptable CC3 standard will be re-analyzed, if the sample has not been destroyed. If the sample has been destroyed, the sample results are qualified as rejected (R).

Step 2 - If the standard's ion abundance ratios are not within the control limits presented in Table BB-1, then all non-detected sample results since the last acceptable CC3 are qualified as rejected (R).

Step 3 - If the S/N is less than 2.5 for the two quantitation ions, then all non-detected sample results analyzed since the last acceptable CC1 are qualified as rejected (R).

B. GC/MS Initial Calibration

Criteria

1.0 All calibration solution retention times for each isomer must fall within the appropriate retention time windows established by the window defining mix. The absolute retention time of the recovery standards, $^{13}C_{12}$-1234-TCDD and $^{13}C_{12}$-123678-HxCDD, must not change more than 10 seconds between the initial CC3 analysis and the analysis of the CC1 at the end of the sequence.

1.1 All calibration solution S/N ratios must be greater than 2.5 for the unlabeled PCDD/PCDF ions, and greater than 10 for the internal standard and recovery standard ions.

Action

The following steps are completed when evaluating the initial calibration by reviewing the raw data for each standard for Tier III validation:

Step 1 - If the recovery standards drift more than +/-10 seconds from the initial CC3 analysis, all detected and non-detected sample results are qualified as rejected (R).

Step 2 - If the quantitation ions and the confirmation ion do not maximize within +/-2 seconds for the labeled and unlabeled standards, non-detected sample results are qualified as rejected (R).

Step 3 - For instrument sensitivity evaluation, follow the steps in Section IV.A.

C. GC/MS Continuing Calibration

Criteria

1.0 Retention times of each isomer must fall within the appropriate retention time windows established by the window defining mix. The absolute retention time of the recovery standards, $^{13}C_{12}$-1234-TCDD and $^{13}C_{12}$-123678-HxCDD, must not change by more than 10 seconds between the initial CC3 analysis and the analysis of the CC1 at the end of the sequence.

1.1 For the CC3 calibration solution the S/N ratio must be greater than 2.5 for the unlabeled PCDD/PCDF ions, and greater than 10 for the internal standard and recovery standard ions.

1.2 The percent recovery of the internal standards should be within 25 to 150%.

Action

The following steps are done in evaluating the continuing calibration by reviewing all the raw data of the CC3 standard for Tier III validation:

Step 1 - If the recovery standards drift by more than +/-10 seconds from the CC3 analysis, all detected and non-detected sample results are qualified as rejected (R).

Step 2 - If the quantitation ions and the confirmation ion do not maximize within +/-2 seconds for the labeled and unlabeled standards, non-detected sample results are qualified as rejected (R).

Step 3 - For instrument sensitivity evaluation, follow the steps in Section IV.A.

Step 4 - If the percent recovery of the internal standards are not within the control limits of 25 to 150%, all detected and non-detected sample results are qualified as estimated (J) and (UJ), respectively.

D. Identification Criteria

Criteria

1.0 The absolute Retention Times (RTs) of the recovery standards must not shift by more than +/- 10 seconds from their retention times in the continuing calibration standard.

1.1 The absolute RT at the maximum peak height of the 2378-substituted isomer must be within -1 to +3 seconds of the RT of the corresponding labeled internal or recovery standard.

1.2 The relative retention time (RRT) of the 2378-substituted isomer must be within 0.05 RRT units of the RRT established during the continuing calibration.

1.3 The retention time of non-2378-substituted compounds (tetra - hepta), must be within the RT windows established by the window defining mix for the corresponding homologue, +/- 10 seconds.

1.4 The two quantitation ions and the confirmation ion for the analytes detected must maximize concurrently (+/- 2 seconds). This also is a requirement for the internal standards and recovery standards.

1.5. The sample peak areas for quantitation ions must meet the +/- 15% theoretical abundance ratio criteria listed in Table BB-1.

1.6 The integrated ion current for each analyte must be at least 2.5 times background noise and the detector must not be saturated. The internal standard ions must be at least 10 times the background noise and must not have saturated the detector. The percent recovery of the internal standards should be within 25 to 150%.

Action

The following steps are taken in evaluating the identification of the compounds by reviewing all the sample raw data for Tier III validation:

Step 1 - If the retention time criteria is not met and a detected result has been reported, then the result is lined out and a non-detected result will be recorded.

Step 2 - If the quantitation ions and confirmation ion do not maximize within +/- 2 seconds, then the result is lined out and a non-detected result will be recorded.

Step 3 - If the quantitation ions do not meet the signal-to-noise criteria, then the result is lined out and a non-detected result will be recorded.

Step 4 - If the ion abundance criteria are not met, but the abundances are within the +/- 15% to 25% ion ratio window, the sample results are qualified as estimated (J). Any sample result with an ion abundance greater than +/- 25% is qualified as rejected (R).

E. Toxicity Equivalency Factor (TEF) and Second Column Confirmation

Criteria

1.0 For each 2378-substituted isomer positively identified in the sample, the TEF from Form I PCDD-2 is multiplied by the concentration to give the TEF-adjusted concentration.

1.1 When the TEF is greater than 0.7 ppb in soil/sediment or 7 ppt in water, secondary column confirmation is required.

Action

The following steps are taken in evaluating the TEF and second Column Confirmation by reviewing Form I PCDD-2, Form II PCDD-3, or laboratory equivalent, and sample raw data for Tier III validation:

Step 1 - Review approximately 10% of the TEF calculations. If any discrepancies in the calculations are found, then the laboratory will be contacted and the sample results will be resubmitted.

Step 2 - Verify that secondary column confirmation has been performed when needed. If it has not been done, the laboratory will be contacted to conduct the secondary column confirmation if the sample has not been destroyed.

F. Sample Dilution

Criteria

1.0 When a sample is diluted, the sample results are quantified using the internal standard if the recovery is greater than or equal to 10%.

1.1 When a sample is diluted, the sample results are quantified using the recovery standards for target compounds associated with the internal standard, if the recovery is less than 10%.

Action

The following steps are taken in evaluating the sample dilution raw data for Tier III validation:

Step 1 - Review the diluted sample data. If the recovery of the internal standard is less than 10% but all the other internal standard criteria are met, then the sample results are recalculated using the internal standards.

G. Sample Re-analysis

Criteria

1.0 If any internal standard or the cleanup standard is outside the control limits of 25 to 150%, then re-extraction and re-analysis are required.

1.1 In instances where the internal standards and cleanup standard are not present with at least a 10:1 S/N ratio at their respective m/z, then re-extraction and re-analysis are required.

1.2 Samples with positive results that are associated with a contaminated method blank and any samples that contain peaks that do not meet all qualitative identification criteria related to the method blank should be re-extracted and re-analyzed.

Action

The following steps are taken in evaluating the sample re-analysis raw data for Tier III validation:

Step 1 - If sample re-analysis is required by the criteria above, the original sample analysis and re-analysis will be compared and the best analysis will be reported.

H. Estimated Detection Limit (EDL) and Estimated Maximum Possible Concentration (EMPC)

Criteria

For each non-detected sample result, an EDL is calculated. The EMPC is a value applied to a sample when the S/N ratio is at least 2.5 for both quantitation ions, but ion abundance criteria are not met. Approximately 10% of these sample results will be recalculated.

Action

If the EDL and EMPC are calculated incorrectly, the laboratory will be contacted and the laboratory will be responsible for resubmission of the reported sample results.

Validation Annex E

Data Validation Procedures for Conventional Parameters Analytes

Validation Annex E

Data Validation Procedures for Conventional Parameters Analytes

I. Introduction

This standard operating procedure (SOP) describes the data validation procedures for a USEPA Region I tiered review of data for conventional parameters (as defined in Section 4.2.2 of the FSP/QAPP) analyzed by Standard Methods for the Examination of Water and Wastewater and EPA Methods 100, 300, and 400 series. Data review procedures presented in this SOP were developed from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines*, USEPA Region I, July 1, 1993.
- *Region I Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analyses*, USEPA Region I, June 13, 1988 (Modified February 1989).
- *Standard Methods for the Examination of Water and Wastewater, 18th ed.*
- *USEPA Contract Laboratory Program, Statement of Work for the Inorganics Analysis, Revision OLM0.1.9*, July 1993
- *Test Methods for Evaluating Solid Waste*: Physical/Chemical Methods, SW-846, 3rd Edition, USEPA, September 1986 and subsequent revisions.
- *Methods for Chemical Analysis of Water and Wastes*, USEPA, EPA 600/4-79-020, March 1979 and subsequent revisions.

II. USEPA Region I Tiered Validation Procedures

All analytical data on conventional parameters will be validated to a Tier I level following the procedures presented in the Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses (July 1996, revised December 1996) and the Region I Tiered Organic and Inorganic Data Validation Guidelines (USEPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this FSP/QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors.) Based on this modified Tier I review, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate relative percent difference (RPD) compliance. Additional Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of a minimum of 25% of the data, and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. In the event that data packages are determined to be incomplete, missing information will be requested from the laboratory. A data validation summary spreadsheet (in the form presented in Attachment E-1) will be prepared to document the data review. The following steps are taken to complete a Tier I validation:

Step 1 - Review the laboratory case narrative. During review of the case narrative, if there are any deviations that warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all sample result summary forms are present and complete. If any of the forms are not in the data package, contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be warranted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data is provided for each sample and any associated QA/QC samples in the data package. Contact the laboratory to obtain missing data (if required):

- Case Narrative;
- Chain-of-Custody Forms;
- Traffic Reports;
- QA Sample Summary Forms;
- Laboratory Bench sheets;
- Instrument Calibration Summary Forms;
- Instrument Run Logs;
- Sample Preparation Logs;
- Instrument/Method Detection Limits;
- Standards Preparation Logs; and
- Supporting (raw) Data.

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to these steps, as discussed above, the Tier I review of data packages for projects subject to this FSP/QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

VI. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review plus review of the data package for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. The QC sample data presented on the data package summary forms will be compared against the control limits presented in Tables 4 and 5 of the FSP/QAPP to determine QC sample compliance. Sample qualification, if required, will be performed following USEPA Region I Guidelines, as discussed in the following sections.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly marked on a copy of the sample result summary forms with a blue ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on the sample result summary forms. Below is a list of qualifiers to be used.

J The compound or analyte was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL). (When this qualifier is used in combination with the letter C -- i.e., JC -- that indicates that the sample result is an estimated concentration due to certain QC deficiencies and that a bias-corrected result is available, as discussed further below.)

U The compound or analyte was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution and (for solid samples only) percent moisture. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) as presented in Attachment E-1.

UJ The compound or analyte was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL) J as presented in Attachment E-1.

R Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B. Holding Times

Criteria

The holding times presented in Table 1 of the FSP/QAPP for conventional parameter analyses must not be exceeded.

Action

The following steps are performed to review holding times for Tier II validation:

Step 1 - Establish the holding time by comparing the sampling date on the chain-of-custody with the dates of analysis and/or digestion on the sample result summary form. The chain-of-custody is also reviewed to determine if the samples were properly preserved.

Step 2 - If the holding times are exceeded by less than 24 hours, no qualification of data is needed.

Step 3 - If the holding times are exceeded by more than 24 hours, but less than 14 days, all positive results are flagged as estimated (J) and the non-detected compounds are flagged as estimated (UJ).

Step 4 - If the holding times are exceeded by more than twice the specified holding time, all results are flagged as unusable (R).

C. Percent Moisture Content

Criteria

Soil/sediment/solid sample results must be adjusted for percent solids, and must have percent solids greater than 30%.

Action

The following steps are performed by reviewing the sample result summary form during the validation of percent solids data:

Verify that the percent solids of soil/sediment/solid samples are greater than 30%.

a. Soil/sediment/solid sample results with a percent solids of less than 10% are qualified as unusable (R).

b. Detected and non-detected soil/sediment/solid sample results with percent solids within the range of greater than 10% to less than 30% are qualified as estimated (J) and unusable (R), respectively.

D. Method Detection Limit (MDL) Study

Criteria

1.0 The MDL for each analyte of interest must be established in accordance with the specified method and Code of Federal Regulations (40CFR Part 136, App. B). A minimum of seven replicates must be analyzed for each matrix of interest.

2.0 The percent relative standard deviation (%RSD) for the seven replicates of the analytes must be less than or equal to 25% and the mean percent recovery must be between 80 and 120%.

Action

1.1 If the mean percent recovery of any analyte is greater than 120% all associated detected sample results are qualified as estimated (J).

1.2 If the mean percent recovery of any analyte is less than 80% but greater than 10% all associated detected and non-detected sample results are qualified as estimated (J).

1.3 If the mean percent recovery of any analyte is less than 10%, all associated detected and non-detected sample results are qualified as estimated (J) and unusable (R), respectively.

1.4 If the %RSD of any analyte is greater than 25%, all associated detected results less than 3 times the PQL and non-detected sample results are qualified as estimated (J) and (UJ), respectively.

E. Calibration

Criteria

1.0 Instruments must be calibrated daily and each time the instrument is set up for analysis.

1.1 Initial Calibration

1.1.1 A blank and at least three standards must be used in establishing the analytical curve.

1.1.2 The correlation coefficient must be greater than or equal to 0.995.

1.2 Initial and Continuing Calibration Verification (ICV and CCV)

1.2.1 A certified standard must be used for the initial Calibration Verification (ICV).

1.2.2 All percent recoveries of the ICVs and CCVs for all analytes must be within 85 to 115% except for cyanide.

1.2.3 A CCV must be analyzed every 10 samples.

Action

The following steps are performed to review instrument calibration for Tier II validation:

Step 1 - Verify that the instrument was calibrated daily and every time it was set up by reviewing the calibration result summary form or laboratory equivalent. Also, verify that the correct number of standards were used for the initial calibration for each analyte reported. If any of these tasks are not completed by the laboratory, the data are qualified as unusable (R).

Step 2 - Verify that the correlation coefficient is greater than or equal to 0.995. If this criterion is not meet, all detected and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 3 - Review the calibration result summary form or laboratory equivalent for the identification of the source of the ICV and CCV. If they are not from different sources, all detected and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 4 - ICV and CCV percent recovery calibration result summary form or laboratory equivalent are reviewed against the above mentioned criteria. If the ICV or CCV percent recovery are outside the acceptance criteria, the following steps are taken to qualify the data:

a. If the ICV or CCV percent recovery is not within control limits, but are within the range of 70 to 84% or 116 to 130% all detected results are qualified as estimated (J).

b. If the ICV or CCV percent recovery is not within control limits, but are within the ranges of 116 to 130% all non-detected results are not qualified.

c. If the ICV or CCV percent recovery is not within control limits, but are within the ranges of 70 to 84%, all non-detected results are qualified as estimated (UJ).

d. If the ICV or CCV percent recovery less than 70%, all non-detected results are qualified as unusable (R).

Step 5 - Laboratory bench sheets are reviewed to verify that the CCVs were analyzed in the required intervals. If they were not analyzed at the required intervals, all detected and non-detected results are qualified as estimated (J) and (UJ), respectively.

F. Blanks

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 A preparation blank must be analyzed every 20 samples or for each batch digested, whichever is more frequent.

1.2 A calibration blank (CCB) must be analyzed after every 10 samples.

Action

Qualification of sample results due to blank contamination is dependent on the conditions and the origin of the blank. No sample results are reported unless the concentration of the analyte in the sample exceeds five times the amount detected in any blank. No sample results are corrected by subtracting blank values. Specific qualifications of sample data are as follows:

Step 1 - Review the blank result summary form or laboratory equivalent for all blanks within the data package.

Step 2 - If a blank result is greater than 2 times the negative IDL, all non-detects are qualified as estimated (UJ).

Step 3 - If an analyte is found in the blank, but not in the sample, the data are not qualified.

Step 4 - When an analyte is detected in the sample and the sample concentration is less than five times the concentration detected in the associated blank, the data are qualified as non-detected (U).

Step 5 - When a positive result is greater than the action level, the result is not qualified.

Note: Any difference between the sample analyses and the related blank analyses which involve weights, volumes or dilution factors must be taken into account when the 5-times criteria are required.

The following are examples of how qualifications apply to blank data:

Example 1 (Step 4): When the sample result is less than the PQL but greater than the action level. Positive results less than the action level are qualified as non-detects.

Factor	5-times
Blank Result	7
PQL	5
Action level	35
Sample Result	22
Qualified Sample Result	22 U

Example 2 (Step 5): When the sample result is greater than the PQL and the action level, no qualification is used.

Factor	5-times
Blank Result	10
PQL	8
Action level	50
Sample Result	70
Qualified Sample Result	70

H. Matrix Spike Sample Analysis

Criteria

1.0 Samples identified as field blanks cannot be used for spiked sample analysis.

1.1 Spike recoveries must be within the control limits of 75 to 125%. However, the control limits do not apply when the sample concentration surpasses the spike concentration by a factor of four or more.

Action

The following steps are performed to review inorganic matrix spike analysis for Tier II validation:

Step 1 - Matrix spike recoveries are reviewed on the matrix spike result summary form or laboratory equivalent. If they are out of the control limits of 75 to 125%, the following steps are taken:

a. When the spike recovery is greater than 125% and the reported sample results are non-detected, no qualification of data is needed.

b. When the spike recovery is greater than 125% and the reported sample results are greater than the PQL, the data are qualified as estimated (J).

c. When the spike recovery is less than 75% and the reported sample results are greater than the PQL, all positive results are qualified as estimated (J) and one of the following steps will be

taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

d. If the spike recovery is within the range of 30 to 74% and the sample results are non-detected, the data are qualified as estimated (UJ).

e. If the spike recovery is less than 30% and the sample results are non-detected, the data are qualified as unusable (R).

I. Duplicate Analysis

Criteria

1.0 Samples identified as field blanks cannot be used for duplicate sample analyses.

1.1 A control limit of +/- 20% for waters and +/- 35% for soils for the Relative Percent Difference (RPD) are used for sample results greater than five times the PQL as presented in Table 5 of the FSP/QAPP.

1.2 A control limit of +/- the PQL for waters and +/- 2 times the PQL for soils are used for sample values less than five times the PQL, including when only one sample value is greater than 5 times the PQL or when one sample is above the method detection limit (MDL) and one is non-detected.

1.3 Duplicate sample analysis must be prepared and analyzed for every 20 samples, for every batch digested, or for every matrix, whichever is more frequent.

Action

Verify on the duplicate result summary form or laboratory equivalent that the RPD for the duplicate samples analysis is within the above mentioned criteria. If duplicate analysis results are outside the appropriate control windows, all sample results greater than the PQL for that analyte and the same matrix are qualified as estimated (J).

J. Field Duplicates

Criteria

1.0 For sample values greater than 5 times the PQL, the control limit for the RPD for water matrices is +/- 30% and +/- 50% for soil matrices.

1.1 For sample values less than 5 times the PQL, the control limit of +/-2 times the PQL for waters and +/- 4 times the PQL for soils will be used.

Action

Step 1 - Calculate all the RPD values for positive results between the sample and the field duplicate.

$$\text{Calculation:} \quad RPD = \frac{\text{Sample Result - Field Duplicate}}{(\text{Sample Result + Field Duplicate})/2} \times 100$$

Step 2 - If duplicate analysis results are outside the appropriate control limits, all sample results greater than the PQL for that analyte and the same matrix are qualified as estimated (J).

K. Laboratory Control Sample (LCS) Analysis Limits

Criteria

1.0 Aqueous LCS results must fall within the control limits of 80 to 120%.

1.1 Solid LCS results must fall within the control limits established by the laboratory as presented on LCS result summary form or the laboratory equivalent.

1.2 A LCS must be prepared and analyzed for every 20 samples, for every batch digested, or for every matrix, whichever is more frequent.

Action

2.0 The following steps are taken to evaluate the aqueous LCS:

Step 1 - Review the Form VII or the laboratory equivalent for any analyte that is outside the control limits of 80 to 120%.

Step 2 - If the LCS recovery for any analyte is greater than 120%, results greater than the PQL are qualified as estimated (J).

Step 3 - If the LCS recovery for any analyte is less than 80%, sample results greater than the PQL are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

Step 4 - If the sample results are non-detects and the LCS recovery is greater than 120%, no qualification of the data is performed.

Step 5 - If the sample results are non-detects and the LCS recoveries are within the control limits of 50 to 79%, the data are qualified as estimated (UJ).

Step 6 - If the LCS recoveries for any analyte are less than 50%, the data for that analyte are qualified as unusable (R).

2.1 The following steps are taken to evaluate the soil LCS:

Step 1 - Review the Form VII or laboratory equivalent to identify any analyte that is outside the control limits established by the laboratory.

Step 2 -If any solid LCS recoveries for any analyte are greater than the upper laboratory established control limits, all results greater than the PQL are qualified as estimated (J).

Step 3 - If any solid LCS recoveries for any analyte are less than the lower laboratory established control limits, sample results greater than the PQL are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question; (ii) reanalyzing the existing sample; (iii) bias-correcting the sample result to 100% recovery; or (iv) if the result would have no significant effect on achieving the applicable Performance Standard, simply maintaining the qualifier in the database. In the event that the sample result is bias-corrected, the uncorrected result will be further qualified as estimated/bias-corrected result available (JC), and the bias-corrected result will be presented in the notes field of the data validation summary table.

Step 4 - If the LCS results are greater than the upper control limits and the sample results are non-detected, no qualification of the data is needed.

Step 5 - If the LCS results are less than the lower control limits and the sample results are non-detected, the data are qualified as estimated (UJ).

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results.

A. Calibration

Criteria

1.0 The initial calibration for must contain three standards, one of which must be at the PQL.

1.1 The correlation coefficient must be greater than or equal to 0.995.

Action

The following steps are taken when verifying calibration for Tier III validation:

Step 1 - Review the calibration raw data and laboratory bench sheets to confirm that the curve for the analysis did include a standard at the PQL. If there is not a standard at the PQL, all positive sample results up to 2 times the PQL and non-detected results are qualified as estimated (J) and (UJ), respectively.

Step 2 - Evaluate the raw data and calculate the correlation coefficient. If the correlation coefficient is less than 0.995, all results greater than the PQL and non-detects are qualified as estimated (J) and (UJ), respectively.

C. Sample Result Verification

Criteria

The quantitation of the analytes and the adjustment of the PQL for dilution and percent solids must be recalculated for 10% of the data.

Action

If the criteria above have not been followed, then the laboratory will be contacted by the reviewer and the laboratory will be responsible for resolving any discrepancies and resubmission of results, if needed.

Attachment E-1
Analytical Data Validation Summary

Validation Annex F

Data Validation Procedures for Air Analyses of Polychlorinated Biphenyls (PCBs)

Validation Annex F

Data Validation Procedures for Air Analyses of Polychlorinated Biphenyls (PCBs)

I. Introduction

This Standard Operating Procedure (SOP) describes the data validation procedures for a United States Environmental Protection Agency (EPA) Region I tiered review of data from ambient air samples analyzed for polychlorinated biphenyls (PCBs) by EPA Method T0-4A. Data review procedures presented in this SOP were developed from the applicable quality control criteria specified in the following documents:

- *Region I Tiered Organic and Inorganic Data Validation Guidelines*, USEPA Region I, July 1, 1993.
- *Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses*, USEPA Region I, Draft, December 1996.
- *CLP Organics Data Review and Preliminary Review*, USEPA SOP HW-6, Revision 10, October 1995.
- *USEPA Compendium Methods TO-4A Determination of Pesticides and Polychlorinated Biphenyls in Ambient Air Using High Volume Polyurethane Foam (PUF) Sampling Followed by Gas Chromatographic/Multi-Detector Detection (GC/MD), January, 1999.*

This SOP is limited to the validation of PCB ambient air monitoring data. An SOP specifying the data validation procedures for data from samples of other matrices analyzed for PCBs (e.g., soil, sediment, water, and biota) is provided in Validation Annex B.

II. EPA Region I Tiered Validation Procedures

All analytical data on PCBs will be validated to a Tier I level following the procedures presented in the *Region I, EPA-New England Data Validation Functional Guidelines for Evaluating Environmental Analyses* (July 1996, revised December 1996) and the *Region I Tiered Organic and Inorganic Data Validation Guidelines* (USEPA guidelines). The basic Tier I review consists of a completeness evidence audit to ensure that all laboratory data and documentation are present. Additionally, for projects subject to this FSP/QAPP, the Tier I review will be modified and expanded to include a number of elements of Tier II review, including review of each sample delivery group (SDG) to identify data deficiencies that may potentially result in qualification of the data (e.g., systematic deviations such as low calibration response factors.)

For all analytical data for PCBs in ambient air samples, with the exception of the data collected from the ambient air monitors around GE's On-Plant Consolidation Areas (OPCAs) at the GE facility, a subset of the data will be identified for additional Tier II review. If QA/QC deviations are identified during the modified Tier I review, those deviations will be addressed in the Tier II review. Otherwise, a minimum of 25% of the data will be chosen at random to be subjected to a Tier II review, which will consist of the Tier I completeness evidence audit and review of all data package summary forms for identification of QA/QC parameter deviations. However, for the data collected from the OPCA air monitors, 100% of the data will be subject to full Tier II review. The Tier II data review will be used to identify and evaluate systematic QA/QC deficiencies that may affect any or all of the sample data presented in a specific data package. The Tier II data validation also includes an evaluation of field duplicate (co-located samples) Relative Percent Difference (RPD) compliance. Additional

Tier II review and Tier III (recalculation of sample results) review may also be performed for a larger portion of the data set, if required, to fully resolve data usability limitations identified during the modified Tier I data review and initial Tier II review for a minimum of 25% of the data chosen at random.

The tiered data validation procedures consisting of modified Tier I review for all data, Tier II review of 25% of the data (or 100% of the data from the OPCA air monitors), and additional Tier II and Tier III review, as required, will be used to evaluate compliance of each data set with the project-specific data quality objectives. The procedures presented in the following sections will be used to perform the Tier I, Tier II, and Tier III data validation reviews. Qualification of analytical data will also be performed, if required, as specified in the data validation protocols presented below.

III. Tier I Validation Procedures

Tier I validation of a data package consists of verifying that all raw data and forms are included and complete. An analytical data validation summary spreadsheet (in the form presented in Attachment F-2) is prepared to document the data review. The following steps are taken to complete a Tier I review:

Step 1 - Review the laboratory case narrative. During review, if there are any deviations that warrant a more extensive validation procedure, a Tier II review would be initiated to evaluate potential data use limitations.

Step 2 - Compare the chain-of-custody and the sample traffic reports. If there are any inconsistencies or if they are incomplete, then contact the laboratory for resolution.

Step 3 - Verify that all forms are present and complete. If any of the forms are not in the data package, contact the laboratory for a resubmission.

Note: If frequent or severe quality control deviations are present on the above-mentioned forms, a more extensive validation procedure may be warranted. Based on the reviewer's judgement, Tier II or Tier III review may be conducted to fully evaluate the usability of the data.

Step 4 - Verify that the following raw data are provided for each sample and associated QA/QC samples in the data package. Contact the laboratory to obtain missing data (if required):

- Case Narrative
- Chain-of-Custody Forms
- Traffic Reports
- QA Sample Summary Forms
- Instrument Calibration Summary Forms
- Instrument Run Logs
- Sample Preparation Logs
- Instrument/Method Detection Limits
- Standards Preparation Logs
- Supporting (raw) Data

Step 5 - With a blue ink pen, record on the first page of the data package: the validation level, date, and reviewer's initials.

In addition to the steps discussed above, the Tier I review of data packages for projects subject to this FSP/QAPP will be expanded to include some elements of Tier II review, including review of the data packages to identify QA/QC deficiencies that may require qualification of the data.

IV. Tier II Validation Procedures

Tier II validation of a data package consists of the steps mentioned above for a Tier I review, plus review of the data package summary forms for identification of QA/QC deviations. Tier II validation does not include review of the "raw data" or recalculation of sample results. Sample qualification is performed (if required) following EPA Region I Guidelines presented in Section I.

A. Data Qualifiers

All data qualified due to QA/QC deviations will be clearly recorded on the data summary package Form I, or laboratory equivalent, with a blue or red ink pen. The laboratory qualification is lined out and the reviewer's qualification placed next to it. The date and the initials of the reviewer will also be placed on Form I. Below is a list of qualifiers that may be used.

J — The compound was positively identified, but the associated numerical value is an estimated concentration. This qualifier is used when the data evaluation procedure identifies a deficiency in the data generation process. This qualifier is also used when a compound or analyte is detected at estimated concentrations less than the practical quantitation limit (PQL).

U — The compound was analyzed for, but was not detected. The sample quantitation limit is presented and adjusted for dilution. For consistency with the database and summary tables prepared from the data, non-detected sample results are displayed as ND(PQL), as presented in Attachment F-1.

UJ — The compound was not detected above the reported sample quantitation limit**.** However, the reported limit is approximate and may or may not represent the actual level of quantitation. For consistency with the database and summary tables prepared from the data, these non-detected sample results are displayed as ND(PQL) J, as presented in Attachment F-1.

R — Indicates that the previously reported detection limit or sample result has been rejected due to a major deficiency in the data generation procedure. The data should not be used for any qualitative or quantitative purposes.

B. Sample Collection and Holding Times

Criteria

Air samples must be collected over a time period of 24 hours (+/-60 minutes) at a sampling rate between 0.20 and 0.28 µg/m^3 with a sample volume no less than 276 standard cubic meters (scm) and no greater than 420 scm.

Air samples and extracts must be preserved at 4° centigrade. Air samples must be extracted within seven days and extracts must be analyzed within 40 days.

Action

Specific holding times for air samples to be analyzed for PCBs are included in Table 1 of the FSP/QAPP. The following steps are performed for the validation of data due to sample collection and holding times:

Step 1 - The sampling documentation is reviewed to determine the sampling period, sampling rate and total sample volume.

Step 2 - If the sampling period is less than 23 hours or greater than 25 hours, all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 3 - If the sampling rate is less than 0.20 $\mu g/m^3$ or greater than 0.28 $\mu g/m^3$, all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 4 - If the sample volume is less than 276 scm or greater than 420 scm, all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 5 - The holding time is established by comparing the sampling date on the chain-of-custody with the dates of analysis and/or extraction on Form I, or laboratory equivalent. The chain-of-custody is also reviewed to determine if the samples were properly preserved.

Step 6 - If the holding times are exceeded by less than 24 hours, then no qualification of data is needed.

Step 7 - If the holding times are exceeded by more than 24 hours but less than twice the holding time – i.e., 14 days for extraction and/or 80 days for analysis – all positive results are qualified as estimated (J) and the non-detected compounds are qualified as estimated (UJ).

Step 8 - If the holding times are exceeded by more than twice the specified holding time, then all results are qualified as unusable (R).

C. PCBs Instrument Performance

Criteria

1.0 The laboratory must report retention time window data on the PCBs Standards Summary (Form X), or laboratory equivalent, for each GC column used to analyze samples. Compounds must be within these retention time windows.

1.1 The retention time of DCB and TCMX in each analysis of PCBs must be compared to the retention time of the DCB and TCMX in Evaluation Standard Mix A. The Percent Difference (%D) must not exceed 0.3% for narrow-bore capillary columns and 1.5% if wide-bore capillary columns are used.

Action

Review the retention time %D presented on Form X or laboratory equivalent. The following steps outline the qualification of data for retention time shifts of DCB and TCMX:

Step 1 - If the retention time shift for DCB and TCMX is greater than 0.3% for a narrow-bore capillary column, or 1.5% for a wide-bore capillary column, the data are qualified as unusable (R).

Step 2 - If DCB and TCMX are absent, then the retention time shift cannot be evaluated (i.e., if they are diluted out due to high concentration of a target compound or matrix interference). No qualification of the data is required.

D. Calibration

Criteria

1.0 Initial Calibration for PCBs

At least a three-point calibration is required for quantification using a minimum of five peaks corresponding to the best matching Aroclor standard. The Percent Relative Standard Deviation (%RSD) of calibration factors must not be greater than 20%.

Note: The %RSD linearity check is required only for columns that are used for quantitation of sample and surrogate results. Columns used only to provide qualitative verification are not required to meet this criterion.

1.1 Initial Calibration Independent Verification for PCBs

The initial calibration should be verified by an independent calibration source yielding a percent recovery of 85% to 115%.

1.2 Analytical Sequence

1.2.1 Primary Analysis

At the beginning of each 24-hour period, continuing calibration verification (CCV) standard must be analyzed.

1.2.2 Confirmation Analysis

1.2.3 Only the standards containing the compounds to be confirmed are required. These standards must be repeated after every ten samples.

1.3 CCV Analysis

The calibration factor for each CCV standard analyzed at the midpoint must be within 15% of the initial calibration (20% on the confirmation columns). The CCV standard must be analyzed at the beginning of the analytical sequence and after very ten samples.

Action

The following steps are performed during the validation of data due to calibration deviations:

Step 1 - Verify that the criterion for the initial calibration linearity have been met by reviewing Form VI or laboratory equivalents. If the criteria in sections IV.D.1.0 through IV.D.1.3 are not met, then all associated positive results are qualified as estimated (J).

Step 2 - Verify by reviewing Form VII, or laboratory equivalents, that the associated CCV %D between calibration factors is not greater than 15% for the compound(s) being quantitated. If the %D is greater than this criterion, then all associated positive results are qualified as estimated (J).

Qualification of PCB Compounds Based on Initial Calibration Deviations

Sample Results	Initial Calibration %RSD > 20.0%	Continuing Calibration %D > 15%
Detects	J	J
Non-Detects	J	J

E. Blanks

Criteria

1.0 No contaminants should be present in the blank(s).

1.1 For each extracted batch, a method blank must be analyzed.

Action

Qualification of sample results due to blank contamination is dependent on the conditions and origin of the blank. No positive sample results are reported unless the concentration of the compound in the sample exceeds five times the amount in the blank. No sample results are corrected by subtracting blank values. Specific qualifications of sample data are as follows:

Step 1 - Review Form IV, or laboratory equivalent, within the data package to ensure that criteria IV.D.1.2 is in compliance. If they are not, the laboratory will be contacted by the reviewer for a written explanation.

Step 2 - Review Form I for all blanks within the data package.

Step 3 - When any compound is detected in the sample and the sample concentration is less than five times the concentration detected in the associated blank, the data are qualified as non-detect (U).

Step 4 - If a compound is found in the blank but not in the sample, then the data are not qualified.

Note: Any difference between the sample analyses and the related blank analyses which involve weights, volumes, or dilution factors, must be taken into account when the 5-times criteria is applied.

The following are examples of how qualifications apply to blank data:

Example 1 (Step 3): When the sample result is greater than the PQL but less than the action level, the sample results are qualified as non-detects. As in the example below, the sample result is less than the blank action level (or 5 x 1); therefore, the sample result is qualified as non-detect.

Factor	5-times
Blank Result	1.0
PQL	0.5
Action Level	5.0
Sample Result	4.0
Qualified Sample Result	4.0 U

Example 2 (Step 4): When the sample result is greater than the blank action level, the sample result is not qualified. As in the example below, the sample result is greater than the blank action level and the sample result is not qualified.

Factor	5-times
Blank Result	1.0
PQL	0.5
Action Level	5.0
Sample Result	6.0
Qualified Sample Result	6.0

Step 5 - When excessive amounts of contamination exist (i.e., saturated peaks by ECD), all compounds affected are qualified as unusable (R).

F. Surrogate Recovery

Criteria

Sample and blank surrogate recoveries (TCMX and DCB for PCBs) must be within the control limits listed in Table 5 of the FSP/QAPP.

Action

Qualification of the data due to surrogate recoveries being out of control is based on the evaluation of all data provided in the data package, especially considering the complexity of the effect of sample matrices. These qualifications are completed in the following steps:

Step 1 - Surrogate recoveries tabulated on Form II, or laboratory equivalent, for each fraction are evaluated against the control limits provided in Table 5 of the FSP/QAPP.

Step 2 - If both TCMX and DCB recoveries are less than the lower control limit, all positive results are qualified as estimated (J) and one of the following steps will be taken: (i) collecting and analyzing a new sample from the location in question or (ii) reanalyzing the existing sample.

Step 3 - If both TCMX and DCB recoveries are less than the lower control limit but greater than 10%, all non-detected results are qualified as estimated (UJ) and detected results are qualified as estimated (J).

Step 4 - If either TCMX or DCB recoveries are less than 10%, the non-detected results are qualified as unusable (R) and detected results are qualified as estimated (J).

Step 5 - If both TCMX and DCB recoveries are greater than the upper control limit, all positive results are qualified as estimated (J).

Qualification of Compounds Based on Surrogate Recovery Deviations

Sample Results	Recovery < 10%	10% ≤ %Recovery < LL	Lower QC Limit ≤ Recovery ≤ UL	Recovery > UL
Detects	J	J	-	J
Non-Detects	R	ND()J	-	-

LL- Lower limit of method QC acceptance criteria.
UL- Upper limit of method QC acceptance criteria.

G. Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

Criteria

1.0 Spike recoveries must be within the control limits in Table 5 of the FSP/QAPP.

1.1 The RPD value between MS and MSD recoveries must be within the control limits specified in Table 5.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound's concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

Action

If recovery results are not within the control limits, the following steps are taken to qualify the data:

Step 1 - If the recovery results are greater than the lower control limits presented in Table 5, the positive results for the compound are qualified as estimated (J)

Step 2 - If the recovery result is less than the lower control limit presented in Table 5, detect and/or non-detect sample results for the compound are qualified as estimated (J).

Step 3 - If the recovery result is less than 10%, the non-detects for that compound in the unspiked sample are qualified as rejected (R) and detects for that compound are qualified as estimated (J). This is the only instance that a non-detect is qualified due to recovery results being out of control.

Step 4 - If any of the RPD values are greater than the limits presented in Table 5, Detect and/or non-detect sample results for that compound are qualified as estimated (J) in the unspiked sample.

Qualification of Compounds Based on MS/MSD Recovery and MS/MSD RPD Deviations

Sample Results	Recovery < 10%	10% ≤ %Recovery < Lower QC Limit	Lower QC Limit ≤ Recovery ≤ Upper QC Limit	Recovery > Upper QC Limit	RPD > QC Limit
Detects	J	J	-	J	J
Non-Detects	R	J	-	-	J

H. Field Duplicates

Criteria

1.0 For air matrices, each compound with a detectable concentration two times greater than the PQL must have an RPD value that is less than 50%.

Action

Step 1 - Calculate all RPD values for positive results between the sample and the field duplicate.

$$\text{Calculation: } RPD = \frac{\text{Sample Result - Field Duplicate}}{\text{(Sample Result + Field Duplicate)/2}} \times 100$$

Step 2 - If the RPD value is greater than 50% in an air matrix and both sample results are greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Step 3 - If both sample results are less than two times the PQL, qualification of the sample data is not required.

Step 4 - If one sample result is less than two times the PQL and the other is greater than two times the PQL, the result for that compound in both samples is qualified as estimated (J).

Qualification of Air Data Based on Field Duplicate RPD Deviations

RPD	> 50%	> 50%	>50%
Sample Results	Both duplicate sample concs. ≥ 2 times PQL	PQL ≤ both duplicate samples concs. < 2 times PQL and ≥ PQL	One sample conc. ≥ 2 times PQL and other sample conc. < 2 times PQL
Detects	J	-	J
Non-Detects	-	-	-

V. Tier III Validation Procedures

Tier III validation of a data package consists of the steps mentioned above for a Tier I and Tier II validation plus review of the "raw data" and recalculation of approximately 10% of the sample results. The compound identification, instrument performance, quantitation, and detection limits are also evaluated.

A. Compound Quantitation and Reported Quantitation Limits

Criteria

The quantitation of detected compounds and the adjustment of the PQL for dilutions must be recalculated for 10% of the data.

Action

Step 1 - If the criteria above have not been followed, the laboratory will be contacted by the reviewer and the laboratory will be responsible for a correction of the quantitation and resubmission of the reported data.

Step 2 - Quantitation limits affected by large, off-scale peaks are qualified as unusable (R).

Step 3 - If the interference is on-scale, the quantitation limit is qualified as estimated (J).

B. Instrument Performance

Criteria

The laboratory must report retention time window data on the PCB standards summary (Form X or laboratory equivalent) for each GC column used to analyze samples. Compounds must be within these retention time windows.

Action

Retention time windows are used in qualitative identification. If the sample results are not within the retention time windows, the following steps are taken to evaluate the data:

Step 1 - The chromatogram is reviewed to see if there are any peaks within an expanded window surrounding the expected retention time window of the compound of interest.

Step 2 - If there are no peaks present either within or close to the retention time window of the out of control targeted compound, then there is no qualification of the data. Non-detected results are considered valid.

Step 3 - If there are peaks present above or close to the PQL and either within or close to the retention time window of the out of control targeted compound, all positive data are qualified as unusable (R).

C. Compound Identification

Criteria

Reported compounds must be within calculated retention time windows for both chromatographic columns.

Action

The following steps are taken during the compound identification:

Step 1 - When the qualitative criteria for two-column confirmation are not met, all reported positive detects are reported as non-detects. The reviewer uses professional judgment and the following steps to report the appropriate quantitation limit:

a. If the misidentified peak was sufficiently outside the target compound retention time window, then the PQL is reported.

b. If the misidentified peak poses an interference with potential detection of a target peak, the reported value is qualified as the estimated (J) quantitation limit.

Step 2 - When PCBs exhibit marginal pattern-matching quality, the reviewer's professional judgment is used to confirm whether the differences are credited to environmental "weathering." If the presence of a PCB is strongly suggested, results are reported as being present.

Step 3 - When an observed pattern closely matches more than one Aroclor, professional judgment is used to decide whether the neighboring Aroclor is a better match, or if multiple Aroclors are present.

Attachment A

Laboratory Qualifications for Northeast Analytical Services, Inc.

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER

Expires 12:01 AM April 01, 2007
Issued April 01, 2006
Revised March 05, 2007

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. ROBERT E. WAGNER
NORTHEAST ANALYTICAL INC
2190 TECHNOLOGY DRIVE
SCHENECTADY, NY 12308

NY Lab Id No: 11078
EPA Lab Code: NY00906

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Amines	
Pyridine	EPA 8270
Benzidines	
3,3' -Dichlorobenzidine	EPA 625
	EPA 8270
Chlorinated Hydrocarbon Pesticides	
4,4'-DDD	EPA 608
	EPA 8081A
4,4'-DDE	EPA 608
	EPA 8081A
4,4'-DDT	EPA 608
	EPA 8081A
Aldrin	EPA 608
	EPA 8081A
alpha-BHC	EPA 608
	EPA 8081A
beta-BHC	EPA 608
	EPA 8081A
Chlordane Total	EPA 608
	EPA 8081A
delta-BHC	EPA 608
	EPA 8081A
Dieldrin	EPA 608

Chlorinated Hydrocarbon Pesticides	
Dieldrin	EPA 8081A
Endosulfan I	EPA 608
	EPA 8081A
Endosulfan II	EPA 608
	EPA 8081A
Endosulfan sulfate	EPA 608
	EPA 8081A
Endrin	EPA 608
	EPA 8081A
Endrin aldehyde	EPA 608
	EPA 8081A
Heptachlor	EPA 608
	EPA 8081A
Heptachlor epoxide	EPA 608
	EPA 8081A
Lindane	EPA 608
	EPA 8081A
Methoxychlor	EPA 608
	EPA 8081A
Toxaphene	EPA 608
	EPA 8081A

Serial No.: 31932

NEW YORK STATE DEPARTMENT OF HEALTH

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. ROBERT E. WAGNER
NORTHEAST ANALYTICAL INC
2190 TECHNOLOGY DRIVE
SCHENECTADY, NY 12308

NY Lab Id No: 11078
EPA Lab Code: NY00906

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Chlorinated Hydrocarbons	
1,2,4-Trichlorobenzene	EPA 625
	EPA 8270
2-Chloronaphthalene	EPA 625
	EPA 8270
Hexachlorobenzene	EPA 625
	EPA 8270
Hexachlorobutadiene	EPA 625
	EPA 8270
Hexachlorocyclopentadiene	EPA 625
	EPA 8270
Hexachloroethane	EPA 625
	EPA 8270
Chlorophenoxy Acid Pesticides	
2,4,5-TP (Silvex)	EPA 8151A
2,4-D	EPA 8151A
Fuel Oxygenates	
Methyl tert-butyl ether	EPA 8260B
t-Butyl alcohol	EPA 8260B
Haloethers	
4-Bromophenylphenyl ether	EPA 625
	EPA 8270

Haloethers	
4-Chlorophenylphenyl ether	EPA 625
	EPA 8270
Bis (2-chloroisopropyl) ether	EPA 625
	EPA 8270
Bis(2-chloroethoxy)methane	EPA 625
	EPA 8270
Bis(2-chloroethyl)ether	EPA 625
	EPA 8270
Mineral	
Calcium Hardness	EPA 200.7
Hardness, Total	EPA 200.7
Nitroaromatics and Isophorone	
2,4-Dinitrotoluene	EPA 625
	EPA 8270
2,6-Dinitrotoluene	EPA 625
	EPA 8270
Isophorone	EPA 625
	EPA 8270
Nitrobenzene	EPA 625
	EPA 8270

Serial No.: 31932

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Nitrosoamines	
N-Nitrosodi-n-propylamine	EPA 625
	EPA 8270
N-Nitrosodiphenylamine	EPA 625
	EPA 8270
Phthalate Esters	
Benzyl butyl phthalate	EPA 625
	EPA 8270
Bis(2-ethylhexyl) phthalate	EPA 625
	EPA 8270
Diethyl phthalate	EPA 625
	EPA 8270
Dimethyl phthalate	EPA 625
	EPA 8270
Di-n-butyl phthalate	EPA 625
	EPA 8270
Di-n-octyl phthalate	EPA 625
	EPA 8270
Polychlorinated Biphenyls	
PCB-1016	EPA 608
	EPA 8082
PCB-1221	EPA 608
	EPA 8082
Polychlorinated Biphenyls	
PCB-1232	EPA 608
	EPA 8082
PCB-1242	EPA 608
	EPA 8082
PCB-1248	EPA 608
	EPA 8082
PCB-1254	EPA 608
	EPA 8082
PCB-1260	EPA 608
	EPA 8082
Polynuclear Aromatics	
Acenaphthene	EPA 625
	EPA 8270
Acenaphthylene	EPA 625
	EPA 8270
Anthracene	EPA 625
	EPA 8270
Benzo(a)anthracene	EPA 625
	EPA 8270
Benzo(a)pyrene	EPA 625
	EPA 8270
Benzo(b)fluoranthene	EPA 625

All approved analytes are listed below:

Polynuclear Aromatics	
Benzo(b)fluoranthene	EPA 8270
Benzo(ghi)perylene	EPA 625
	EPA 8270
Benzo(k)fluoranthene	EPA 625
	EPA 8270
Chrysene	EPA 625
	EPA 8270
Dibenzo(a,h)anthracene	EPA 625
	EPA 8270
Fluoranthene	EPA 625
	EPA 8270
Fluorene	EPA 625
	EPA 8270
Indeno(1,2,3-cd)pyrene	EPA 625
	EPA 8270
Naphthalene	EPA 625
	EPA 8270
Phenanthrene	EPA 625
	EPA 8270
Pyrene	EPA 625
	EPA 8270

Priority Pollutant Phenols	
2,4,5-Trichlorophenol	EPA 625
	EPA 8270
2,4,6-Trichlorophenol	EPA 625
	EPA 8270
2,4-Dichlorophenol	EPA 625
	EPA 8270
2,4-Dimethylphenol	EPA 625
	EPA 8270
2,4-Dinitrophenol	EPA 625
	EPA 8270
2-Chlorophenol	EPA 625
	EPA 8270
2-Methyl-4,6-dinitrophenol	EPA 625
	EPA 8270
2-Nitrophenol	EPA 625
	EPA 8270
4-Chloro-3-methylphenol	EPA 625
	EPA 8270
4-Nitrophenol	EPA 625
	EPA 8270
Cresols, Total	EPA 8270
Pentachlorophenol	EPA 625
	EPA 8270

RE: Final Action on Certification Application for Initial Certification of Chemical Laboratory

AT: SGS-Paradigm Analytical Laboratories, Inc.
5500 Business Dr
Wilmington NC 28405

Transmittal Number: W075862

Dear Mr. Larkins:

Enclosed is your Massachusetts certification as an environmental analysis laboratory. This certificate is in effect through June 30, 2007, and is subject to revision throughout the year to reflect your laboratory's performance on proficiency tests and the status of your certification in your resident state. Please examine the certificate and certified parameter list carefully to ensure that the categories and analytes for which your laboratory is approved appear correct. In addition, please verify the accuracy of your laboratory name, address, telephone number, and director.

Certification is not possible for aluminum in non-potable water and polychlorinated biphenyls in oil because the laboratory did not achieve a sufficient number of acceptable results in proficiency test studies.

Please display the certified parameter list with your certificate. Your certificate is valid only when accompanied by the latest dated certified parameter list, as issued by the Massachusetts DEP.

Renewal of this certificate is contingent upon timely receipt of the results of your participation in NIST-approved water supply and water pollution proficiency test studies. Satisfactory results must be achieved in the analyte categories and methods for which certification is requested. In addition, you are required to submit to this office current copies of your resident state certificate and resident state on-site audit report as renewals occur. Any change in the status of your resident state certification must be reported immediately to this office.

WILMINGTON, NC 28405

Certificate Expiration Date: April 01, 2007

Dear Mr. Larkins,

Enclosed are the ELAP and/or NELAP Certificate(s) of Approval issued to your environmental laboratory for the current permit year. The Certificate(s) supersede any previously issued and is(are) in effect through the expiration date listed above. Please carefully examine the Certificate(s) to insure that the categories, subcategories, analytes and methods for which your laboratory is approved are listed correctly, as well as verifying your laboratory's name, address, lead technical director and identification number.

Pursuant to regulation (Part 55-2 NYCRR), original certificates must be posted conspicuously in the laboratory and shall, upon request, be made available to any client of the laboratory. Certificates remain the property of the New York State Department of Health and must be surrendered promptly on demand.

Please note, pursuant to Section 55-2.5(a) NYCRR, any misrepresentation of the Fields of Accreditation (Matrix - Method - Analyte) for which your laboratory is approved may result in denial, suspension, or revocation of your certification. Any use of the ELAP or NELAP name, reference to the laboratory's approval status and/or using the NELAC/NELAP logo in any catalogs, advertising, business solicitations, proposals, quotations, laboratory analytical reports or other materials must include the laboratory's ELAP identification number, and must distinguish between proposed testing for which the laboratory is approved and the proposed testing for which the laboratory is not approved.

Please notify the ELAP office of any changes you feel need to be made to your Certificate(s). We may be reached via email to elap@health.state.ny.us or by calling (518) 485-5570.

Sincerely,

Joyce Reilly

Serial No.: 29716

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER
Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Expires 12:01 AM April 01, 2007
Issued April 1, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. W MICHAEL LARKINS
PARADIGM ANALYTICAL LABORATORIES
5500 BUSINESS DRIVE
WILMINGTON, NC 28405

NY Lab Id No: 11685
EPA Lab Code: NC00919

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Polychlorinated Biphenyls	
2,2',3,4',5,5',6-Heptachlorobiphenyl	EPA 1668 A
2,2',3,4,5,5'-Hexachlorobiphenyl	EPA 1668 A
2,2',3,4',5,6,6'-Heptachlorobiphenyl	EPA 1668 A
2,2',3,4,5'-Pentachlorobiphenyl	EPA 1668 A
2,2',3,5,5',6-Hexachlorobiphenyl	EPA 1668 A
2,2',3,5'-Tetrachlorobiphenyl	EPA 1668 A
2,2',4,4',5,5-Hexachlorobiphenyl	EPA 1668 A
2,2',4,4',6,6'-Hexachlorobiphenyl	EPA 1668 A
2,2',4,5,5'-Pentachlorobiphenyl	EPA 1668 A
2,2',4,6,6'-Pentachlorobiphenyl	EPA 1668 A
2,2',5,5'-Tetrachlorobiphenyl	EPA 1668 A
2,2',5-Trichlorobiphenyl	EPA 1668 A
2,2',6,6'-Tetrachlorobiphenyl	EPA 1668 A
2,2',6-Trichlorobiphenyl	EPA 1668 A
2,2'-dichlorobiphenyl	EPA 1668 A
2,3,3',4,4',5,5',6-Octachlorobiphenyl	EPA 1668 A
2,3,3',4,4',5,5'-Heptachlorobiphenyl	EPA 1668 A
2,3,3',4,4',5'-Hexachlorobiphenyl	EPA 1668 A
2,3,3',4,4',5-Hexachlorobiphenyl	EPA 1668 A
2,3,3',4,4'-Pentachlorobiphenyl	EPA 1668 A
2,3,3',4,6-Pentachlorobiphenyl	EPA 1668 A
2,3',4,4',5,5'-Hexachlorobiphenyl	EPA 1668 A
2,3',4,4',5'-Pentachlorobiphenyl	EPA 1668 A

Polychlorinated Biphenyls	
2,3,4,4',5-Pentachlorobiphenyl	EPA 1668 A
2,3',4,4',5-Pentachlorobiphenyl	EPA 1668 A
2,3',4,4'-Tetrachlorobiphenyl	EPA 1668 A
2,3-Dichlorobiphenyl	EPA 1668 A
2,4',5-Trichlorobiphenyl	EPA 1668 A
2-Chlorobiphenyl	EPA 1668 A
3,3',4,4',5,5'-Hexachlorobiphenyl	EPA 1668 A
3,3',4,4',5-Pentachlorobiphenyl	EPA 1668 A
3,3',4,4'-Tetrachlorobiphenyl	EPA 1668 A
3,4,4',5-Tetrachlorobiphenyl	EPA 1668 A
3,4,4'-Trchlorobiphenyl	EPA 1668 A
4,4'-Dichlorobiphenyl	EPA 1668 A
4-Chlorobiphenyl	EPA 1668 A
Decachlorobiphenyl	EPA 1668 A
PCB-1016	EPA 8082
PCB-1221	EPA 8270C
PCB-1232	EPA 8082

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. W MICHAEL LARKINS
PARADIGM ANALYTICAL LABORATORIES
5500 BUSINESS DRIVE
WILMINGTON, NC 28405

NY Lab Id No: 11685
EPA Lab Code: NC00919

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Purgeable Aromatics	
p-Isopropyltoluene (P-Cymene)	EPA 8260B
sec-Butylbenzene	EPA 8260B
Styrene	EPA 8260B
tert-Butylbenzene	EPA 8260B
Toluene	EPA 8260B
Total Xylenes	EPA 8260B
Purgeable Halocarbons	
1,1,1,2-Tetrachloroethane	EPA 8260B
1,1,1-Trichloroethane	EPA 8260B
1,1,2,2-Tetrachloroethane	EPA 8260B
1,1,2-Trichloroethane	EPA 8260B
1,1-Dichloroethane	EPA 8260B
1,1-Dichloroethene	EPA 8260B
1,2,3-Trichloropropane	EPA 8260B
1,2-Dibromo-3-chloropropane	EPA 8260B
1,2-Dichloroethane	EPA 8260B
1,2-Dichloropropane	EPA 8260B
1,3-Dichloropropane	EPA 8260B
2,2-Dichloropropane	EPA 8260B
2-Chloro-1,3-butadiene (Chloroprene)	EPA 8260B
3-Chloropropene (Allyl chloride)	EPA 8260B
Bromochloromethane	EPA 8260B
Bromodichloromethane	EPA 8260B

Purgeable Halocarbons	
Bromoform	EPA 8260B
Bromomethane	EPA 8260B
Carbon tetrachloride	EPA 8260B
Chloroethane	EPA 8260B
Chloroform	EPA 8260B
Chloromethane	EPA 8260B
cis-1,2-Dichloroethene	EPA 8260B
cis-1,3-Dichloropropene	EPA 8260B
Dibromomethane	EPA 8260B
Dichlorodifluoromethane	EPA 8260B
Methylene chloride	EPA 8260B
Tetrachloroethene	EPA 8260B
trans-1,2-Dichloroethene	EPA 8260B
trans-1,3-Dichloropropene	EPA 8260B
Trichloroethene	EPA 8260B
Trichlorofluoromethane	EPA 8260B
Vinyl chloride	EPA 8260B
Purgeable Organics	
1,4-Dioxane	EPA 8260B
2-Butanone (Methylethyl ketone)	EPA 8260B
2-Hexanone	EPA 8260B
4-Methyl-2-Pentanone	EPA 8260B
Acetone	EPA 8260B

Serial No.: 29717

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Purgeable Organics	
Acetonitrile	EPA 8260B
Carbon Disulfide	EPA 8260B
Isobutyl alcohol	EPA 8260B
Methyl tert-butyl ether	EPA 8260B
Semi-Volatile Organics	
2-Methylnaphthalene	EPA 8270C
Benzoic Acid	EPA 8270C
Benzyl alcohol	EPA 8270C
Dibenzofuran	EPA 8270C

Laboratory Qualifications for Columbia Analytical Services

The Commonwealth of Massachusetts

Department of Environmental Protection

Division of Environmental Analysis
Senator William X. Wall Experiment Station

certifies

M-NY032

COLUMBIA ANALYTICAL SERVICES
1 MUSTARD ST
SUITE 250
ROCHESTER, NY 14609-0000

Laboratory Director: Michael K. Perry

for the analysis of NON POTABLE WATER (CHEMISTRY)
POTABLE WATER (CHEMISTRY)

pursuant to 310 CMR 42.00

This certificate supersedes all previous Massachusetts certificates issued to this laboratory. The laboratory is regulated by and shall be responsible for being in compliance with Massachusetts regulations at 310 CMR 42.00.

This certificate is valid only when accompanied by the latest dated Certified Parameter List as issued by the Massachusetts D.E.P. Contact the Division of Environmental Analysis to verify the current certification status of the laboratory.

Certification is no guarantee of the validity of the data. This certification is subject to unannounced laboratory inspections.

Issued: 01 JUL 2006

Expires: 30 JUN 2007

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. MICHAEL PERRY
COLUMBIA ANALYTICAL SERVICES
1 MUSTARD ST - STE 250
ROCHESTER, NY 14609

NY Lab Id No: 10145
EPA Lab Code: NY00032

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Phthalate Esters	
Di-n-octyl phthalate	EPA 625
	EPA 8270
Polychlorinated Biphenyls	
PCB-1016	EPA 8082
PCB-1221	EPA 8082
PCB-1232	EPA 8082
PCB-1242	EPA 8082
PCB-1248	EPA 8082
PCB-1254	EPA 8082
PCB-1260	EPA 8082
Polynuclear Aromatics	
3-Methylcholanthrene	EPA 8270
7,12-Dimethylbenzyl (a) anthracene	EPA 8270
Acenaphthene	EPA 625
	EPA 8270
	EPA 8310
Acenaphthylene	EPA 625
	EPA 8270
	EPA 8310
Anthracene	EPA 625
	EPA 8270
	EPA 8310

Polynuclear Aromatics	
Benzo(a)anthracene	EPA 625
	EPA 8270
	EPA 8310
Benzo(a)pyrene	EPA 625
	EPA 8270
	EPA 8310
Benzo(b)fluoranthene	EPA 625
	EPA 8270
	EPA 8310
Benzo(ghi)perylene	EPA 625
	EPA 8270
	EPA 8310
Benzo(k)fluoranthene	EPA 625
	EPA 8270
	EPA 8310
Chrysene	EPA 625

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. MICHAEL PERRY
COLUMBIA ANALYTICAL SERVICES
1 MUSTARD ST - STE 250
ROCHESTER, NY 14609

NY Lab Id No: 10145
EPA Lab Code: NY00032

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Chlorinated Hydrocarbon Pesticides	
Endosulfan sulfate	EPA 8081A
Endrin	EPA 8081A
Endrin aldehyde	EPA 8081A
Endrin Ketone	EPA 8081A
gamma-Chlordane	EPA 8081A
Heptachlor	EPA 8081A
Heptachlor epoxide	EPA 8081A
Kepone	EPA 8081A
Lindane	EPA 8081A
Methoxychlor	EPA 8081A
Pentachloronitrobenzene	EPA 8270
Toxaphene	EPA 8081A
Chlorinated Hydrocarbons	
1,2,4,5-Tetrachlorobenzene	EPA 8270
1,2,4-Trichlorobenzene	EPA 8260B
	EPA 8270
1-Chloronaphthalene	EPA 8270
2-Chloronaphthalene	EPA 8270
Hexachlorobenzene	EPA 8270
Hexachlorobutadiene	EPA 8260B
	EPA 8270
Hexachlorocyclopentadiene	EPA 8270
Chlorinated Hydrocarbons	
Hexachloroethane	EPA 8270
Hexachlorophene	EPA 8270
Hexachloropropene	EPA 8270
Pentachlorobenzene	EPA 8270
Chlorophenoxy Acid Pesticides	
2,4,5-T	EPA 8151A
2,4,5-TP (Silvex)	EPA 8151A
2,4-D	EPA 8151A
Dicamba	EPA 8151A
Dinoseb	EPA 8151A
Haloethers	
4-Bromophenylphenyl ether	EPA 8270
4-Chlorophenylphenyl ether	EPA 8270
Bis (2-chloroisopropyl) ether	EPA 8270
Bis(2-chloroethoxy)methane	EPA 8270
Bis(2-chloroethyl)ether	EPA 8270
Metals I	
Barium, Total	EPA 6010B
	EPA 6020
Cadmium, Total	EPA 6010B

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. MICHAEL PERRY
COLUMBIA ANALYTICAL SERVICES
1 MUSTARD ST - STE 250
ROCHESTER, NY 14609

NY Lab Id No: 10145
EPA Lab Code: NY00032

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES AIR AND EMISSIONS
All approved analytes are listed below:

Purgeable Halocarbons	
Trichloroethene	EPA TO-15
Trichlorofluoromethane	EPA TO-15
Vinyl chloride	EPA TO-15
Volatile Chlorinated Organics	
Benzyl chloride	EPA TO-15
Volatile Organics	
1,3-Butadiene	EPA TO-15
2,2,4-Trimethylpentane	EPA TO-15
2-Butanone (Methylethyl ketone)	EPA TO-15
4-Methyl-2-Pentanone	EPA TO-15
Hexane	EPA TO-15
Methyl iodide	EPA TO-15
Methyl tert-butyl ether	EPA TO-15
Vinyl acetate	EPA TO-15

Serial No.: 31001

Laboratory Qualifications for Severn Trent Laboratories, Inc.

The Commonwealth of Massachusetts

Department of Environmental Protection

Division of Environmental Analysis
Senator William X. Wall Experiment Station

certifies

M-NY044

STL BUFFALO
10 HAZELWOOD DR
AMHERST, NY 14228-2298

Laboratory Director: **CHRISTOPHER SPENCER**

for the analysis of **POTABLE WATER (CHEMISTRY)**
NON POTABLE WATER (CHEMISTRY)

pursuant to 310 CMR 42.00

This certificate supersedes all previous Massachusetts certificates issued to this laboratory. The laboratory is regulated by and shall be responsible for being in compliance with Massachusetts regulations at 310 CMR 42.00.

This certificate is valid only when accompanied by the latest dated Certified Parameter List as issued by the Massachusetts D.E.P. Contact the Division of Environmental Analysis to verify the current certification status of the laboratory.

Certification is no guarantee of the validity of the data. This certification is subject to unannounced laboratory inspections.

Issued: **01 JUL 2006**

Expires: **30 JUN 2007**

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. CHRISTOPHER SPENCER
STL BUFFALO
10 HAZELWOOD DRIVE - SUITE 106
AMHERST, NY 14228

NY Lab Id No: 10026
EPA Lab Code: NY00044

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE All approved analytes are listed below:

Purgeable Organics

2-Hexanone	EPA 8260B
4-Methyl-2-Pentanone	EPA 8260B
Acetone	EPA 8260B
Acetonitrile	EPA 8260B
Carbon Disulfide	EPA 8260B
Ethyl Acetate	EPA 8260B
Ethylene Glycol	EPA 8015 B
Isobutyl alcohol	EPA 8015 B
	EPA 8260B
Methyl tert-butyl ether	EPA 8260B
o-Toluidine	EPA 8260B
Propionitrile	EPA 8260B
Vinyl acetate	EPA 8260B

Semi-Volatile Organics

2-Methylnaphthalene	EPA 8270
4-Amino biphenyl	EPA 8270
Acetophenone	EPA 8270
Benzoic Acid	EPA 8270
Benzyl alcohol	EPA 8270
Dibenzofuran	EPA 8270
Ethyl methanesulfonate	EPA 8270
Isosafrole	EPA 8270

Semi-Volatile Organics

Methyl methanesulfonate	EPA 8270
O,O,O-Triethyl phosphorothioate	EPA 8270
Phenacetin	EPA 8270

Volatile Chlorinated Organics

Epichlorohydrin	EPA 8260B

Sample Preparation Methods

EPA 1311	EPA 3010A	EPA 3005A	EPA 3050B	
EPA 3580	EPA 3550B	EPA 5030B	EPA 3020A	
EPA 5035	EPA 3060A	EPA 5035	EPA 3060A	
		EPA 3580	EPA 3550B	EPA 5030B

MR. ALBERT VICINIE
SEVERN TRENT LABORATORIES, INC./STL PITTSBURGH
301 ALPHA DRIVE
RIDC PARK
PITTSBURGH, PA 15238

Certificate Expiration Date: April 01, 2007

Dear Mr. Vicinie,

Enclosed are revised ELAP and/or NELAP Certificate(s) of Approval issued to your environmental laboratory for the current permit year. The Certificate(s) supersede any previously issued and are in effect through the expiration date listed above. Please carefully examine the Certificate(s) to insure that the categories, subcategories, analytes and methods for which your laboratory is approved are listed correctly, as well as verifying your laboratory's name, address, lead technical director and identification number.

Pursuant to regulation (Part 55-2 NYCRR), original certificates must be posted conspicuously in the laboratory and shall, upon request, be made available to any client of the laboratory. Certificates remain the property of the New York State Department of Health and must be surrendered promptly on demand.

You must now return the certificate(s) listed below within ten days of the date of this letter. Please check the serial number(s) carefully and return only those certificates with their serial numbers listed. Please be advised that the certificate(s) listed are the property of the New York State Department of Health and MUST be returned to the ELAP office at this time.

Please note, pursuant to Section 55-2.5(a) NYCRR, any misrepresentation of the Fields of Accreditation (Matrix - Method - Analyte) for which your laboratory is approved may result in denial, suspension, or revocation of your certification. Any use of the ELAP or NELAP name, reference to the laboratory's approval status and/or using the NELAC/NELAP logo in any catalogs, advertising, business solicitations, proposals, quotations, laboratory analytical reports or other materials must include the laboratory's ELAP identification number, and must distinguish between proposed testing for which the laboratory is approved and the proposed testing for which the laboratory is not approved.

Please notify the ELAP office of any changes you feel need to be made to your Certificate(s). We may be reached via email to elap@health.state.ny.us or by calling (518) 485-5570.

Please return the following Certificates:
30257 NW NELAC
30258 CLP ELAP

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. ALBERT VICINIE
SEVERN TRENT LABORATORIES, INC./STL PITTSBURGH
301 ALPHA DRIVE RIDC PARK
PITTSBURGH, PA 15238

NY Lab Id No: 11182
EPA Lab Code: PA00146

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Acrylates	
Acrolein (Propenal)	EPA 8260B
Acrylonitrile	EPA 8260B
Ethyl methacrylate	EPA 8260B
Methyl methacrylate	EPA 8260B
Amines	
2-Nitroaniline	EPA 8270C
3-Nitroaniline	EPA 8270C
4-Chloroaniline	EPA 8270C
4-Nitroaniline	EPA 8270C
Aniline	EPA 8270C
Carbazole	EPA 8270C
Diphenylamine	EPA 8270C
Pronamide	EPA 8270C
Benzidines	
3,3' -Dichlorobenzidine	EPA 8270C
3,3'-Dimethylbenzidene	EPA 8270C
Benzidine	EPA 8270C
Characteristic Testing	
E.P. Toxicity	EPA 1310
Ignitability	EPA 1010
	EPA 1020
TCLP	EPA 1311

Chlorinated Hydrocarbon Pesticides	
4,4'-DDD	EPA 8081A
4,4'-DDE	EPA 8081A
4,4'-DDT	EPA 8081A
Aldrin	EPA 8081A
alpha-BHC	EPA 8081A
alpha-Chlordane	EPA 8081A
beta-BHC	EPA 8081A
Chlordane Total	EPA 8081A
Chlorobenzilate	EPA 8270C
delta-BHC	EPA 8081A
Dieldrin	EPA 8081A
Endosulfan I	EPA 8081A
Endosulfan II	EPA 8081A
Endosulfan sulfate	EPA 8081A
Endrin	EPA 8081A
Endrin aldehyde	EPA 8081A
Endrin Ketone	EPA 8081A
gamma-Chlordane	EPA 8081A
Heptachlor	EPA 8081A
Heptachlor epoxide	EPA 8081A
Lindane	EPA 8081A
Methoxychlor	EPA 8081A
Toxaphene	EPA 8081A

Serial No.: 30217

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Chlorinated Hydrocarbons	
1,2,4,5-Tetrachlorobenzene	EPA 8270C
1,2,4-Trichlorobenzene	EPA 8260B
	EPA 8270C
2-Chloronaphthalene	EPA 8270C
Hexachlorobenzene	EPA 8270C
Hexachlorobutadiene	EPA 8260B
	EPA 8270C
Hexachlorocyclopentadiene	EPA 8270C
Hexachloroethane	EPA 8270C
Hexachloropropene	EPA 8270C
Pentachlorobenzene	EPA 8270C
Chlorophenoxy Acid Pesticides	
2,4,5-T	EPA 8151A
2,4,5-TP (Silvex)	EPA 8151A
2,4-D	EPA 8151A
2,4-DB	EPA 8151A
Dalapon	EPA 8151A
Dicamba	EPA 8151A
Dinoseb	EPA 8151A
MCPA	EPA 8151A
MCPP	EPA 8151A

Haloethers	
4-Bromophenylphenyl ether	EPA 8270C
4-Chlorophenylphenyl ether	EPA 8270C
Bis (2-chloroisopropyl) ether	EPA 8270C
Bis(2-chloroethoxy)methane	EPA 8270C
Bis(2-chloroethyl)ether	EPA 8270C
Metals I	
Barium, Total	EPA 3005A
	EPA 3010A
	EPA 3050B
	EPA 6010B
	EPA 6020
Cadmium, Total	EPA 3005A

314 NORTH PEARL ST
ALBANY, NY 12207-0000

Laboratory Director: **Paul A. Batista**

for the analysis of **NON POTABLE WATER (CHEMISTRY)**

pursuant to 310 CMR 42.00

This certificate supersedes all previous Massachusetts certificates issued to this laboratory. The laboratory is regulated by and shall be responsible for being in compliance with Massachusetts regulations at 310 CMR 42.00.

This certificate is valid only when accompanied by the latest dated Certified Parameter List as issued by the Massachusetts D.E.P. Contact the Division of Environmental Analysis to verify the current certification status of the laboratory.

Certification is no guarantee of the validity of the data. This certification is subject to unannounced laboratory inspections.

Issued: **01 JUL 2006**

Expires: **30 JUN 2007**

CELEBRATING 30 Thirty Years of AIHA Accrediting Labs
SOUND DATA SMART DECISIONS
1974 – 2004

acknowledges that

Adirondack Environmental Services, Inc.

314 North Pearl Street, Albany, NY 12207-1322
Laboratory ID: 100307

has fulfilled the requirements of the AIHA Laboratory Quality Assurance Programs (LQAP), thereby, conforming to the ISO/IEC 17025 international standard, *General Requirements for the Competence of Testing and Calibration Laboratories*.
The above named laboratory has been accredited by AIHA in the following:

ACCREDITATION PROGRAMS

✓	**INDUSTRIAL HYGIENE**	Accreditation Expires: 04/01/2008
☐	**ENVIRONMENTAL LEAD**	Accreditation Expires:
☐	**ENVIRONMENTAL MICROBIOLOGY**	Accreditation Expires:
☐	**FOOD**	Accreditation Expires:
☐	**UNIQUE SCOPE**	Accreditation Expires:

Specific categories of testing, within each Accreditation Program, for which the above named laboratory maintains accreditation is outlined on the attached **Scope of Accreditation**. Continued accreditation is contingent upon successful on-going compliance with LQAP requirements. This certificate is not valid without the attached **Scope of Accreditation**.

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. PAUL BATISTA
ADIRONDACK ENVIRONMENTAL SERVICES INC
314 NORTH PEARL STREET
ALBANY, NY 12207

NY Lab Id No: 10709
EPA Lab Code: NY00063

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Disinfection By-products	
Bromochloroacetic acid	EPA 552.2
Dibromoacetic acid	EPA 552.2
Dichloroacetic acid	EPA 552.2
Monobromoacetic acid	EPA 552.2
Monochloroacetic acid	EPA 552.2
Trichloroacetic acid	EPA 552.2
Drinking Water Metals I	
Arsenic, Total	EPA 200.7
Barium, Total	EPA 200.7
Cadmium, Total	EPA 200.7
Chromium, Total	EPA 200.7
Copper, Total	EPA 200.7
Iron, Total	EPA 200.7
Lead, Total	EPA 200.9
Manganese, Total	EPA 200.7
Mercury, Total	EPA 245.1
Selenium, Total	EPA 200.9
Silver, Total	EPA 200.7
Zinc, Total	EPA 200.7
Drinking Water Metals II	
Aluminum, Total	EPA 200.7
Antimony, Total	EPA 200.9
Drinking Water Metals II	
Beryllium, Total	EPA 200.7
Nickel, Total	EPA 200.7
Thallium, Total	EPA 200.9
Drinking Water Metals III	
Calcium, Total	EPA 200.7
Magnesium, Total	EPA 200.7
Potassium, Total	EPA 200.7
Sodium, Total	EPA 200.7
Drinking Water Miscellaneous	
Butachlor	EPA 507
Methyl tert-butyl ether	EPA 502.2/ SEE ITEM 198.5
	EPA 524.2
Propachlor	EPA 508
Drinking Water Non-Metals	
Alkalinity	SM 18-20 2320B
Calcium Hardness	EPA 200.7
Chloride	EPA 300.0
Color	SM 18-20 2120B
Corrosivity	SM 18-19 2330
Cyanide, Free	EPA 335.4
Fluoride, Total	EPA 300.0
Hydrogen Ion (pH)	EPA 150.1

Serial No.: 30517

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER
Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Expires 12:01 AM April 01, 2007
Issued April 01, 2006
Revised July 17, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. PAUL BATISTA
ADIRONDACK ENVIRONMENTAL SERVICES INC
314 NORTH PEARL STREET
ALBANY, NY 12207

NY Lab Id No: 10709
EPA Lab Code: NY00063

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Drinking Water Non-Metals	
Nitrate (as N)	EPA 300.0
	SM 18-20 4500-NO3 F
Nitrite (as N)	EPA 300.0
	SM 18-20 4500-NO2 B
Orthophosphate (as P)	EPA 300.0
Solids, Total Dissolved	SM 18-20 2540C
Specific Conductance	SM 18-20 2510B
Sulfate (as SO4)	EPA 300.0
Drinking Water Organohalide Pesticides	
Alachlor	EPA 507
Aldrin	EPA 508
Atrazine	EPA 507
Chlordane Total	EPA 508
Dieldrin	EPA 508
Endrin	EPA 508
Heptachlor	EPA 508
Heptachlor epoxide	EPA 508
Lindane	EPA 508
Methoxychlor	EPA 508
Metolachlor	EPA 507
Metribuzin	EPA 507
Simazine	EPA 507
Toxaphene	EPA 508
Drinking Water Trihalomethanes	
Bromodichloromethane	EPA 502.2
	EPA 524.2
Bromoform	EPA 502.2
	EPA 524.2
Chloroform	EPA 502.2
	EPA 524.2
Dibromochloromethane	EPA 502.2
	EPA 524.2
Microextractibles	
1,2-Dibromo-3-chloropropane	EPA 504.1
1,2-Dibromoethane	EPA 504.1
Polychlorinated Biphenyls	
PCB Screen	EPA 508
Volatile Aromatics	
1,2,3-Trichlorobenzene	EPA 502.2
	EPA 524.2
1,2,4-Trichlorobenzene	EPA 502.2
	EPA 524.2
1,2,4-Trimethylbenzene	EPA 502.2
	EPA 524.2
1,2-Dichlorobenzene	EPA 502.2
	EPA 524.2

Serial No.: 30517

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Volatile Aromatics	
1,3,5-Trimethylbenzene	EPA 502.2
	EPA 524.2
1,4-Dichlorobenzene	EPA 502.2
	EPA 524.2
2-Chlorotoluene	EPA 502.2
	EPA 524.2
4-Chlorotoluene	EPA 502.2
	EPA 524.2
Benzene	EPA 502.2
	EPA 524.2
Bromobenzene	EPA 502.2
	EPA 524.2
Chlorobenzene	EPA 502.2
	EPA 524.2
Ethyl benzene	EPA 502.2
	EPA 524.2
Hexachlorobutadiene	EPA 502.2
	EPA 524.2
Isopropylbenzene	EPA 502.2
	EPA 524.2
n-Butylbenzene	EPA 502.2
	EPA 524.2
n-Propylbenzene	EPA 502.2

Volatile Aromatics	
n-Propylbenzene	EPA 524.2
p-Isopropyltoluene (P-Cymene)	EPA 502.2
	EPA 524.2
sec-Butylbenzene	EPA 502.2
	EPA 524.2
Styrene	EPA 502.2
	EPA 524.2
tert-Butylbenzene	EPA 502.2
	EPA 524.2
Toluene	EPA 502.2
	EPA 524.2
Total Xylenes	EPA 502.2
	EPA 524.2
Volatile Halocarbons	
1,1,1,2-Tetrachloroethane	EPA 502.2
	EPA 524.2
1,1,1-Trichloroethane	EPA 502.2
	EPA 524.2
1,1,2,2-Tetrachloroethane	EPA 502.2
	EPA 524.2
1,1,2-Trichloroethane	EPA 502.2
	EPA 524.2
1,1-Dichloroethane	EPA 502.2

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Acrylates	
Acrolein (Propenal)	EPA 624
	EPA 8260B
Acrylonitrile	EPA 624
	EPA 8260B
Amines	
1,4-Phenylenediamine	EPA 8270C
1-Naphthylamine	EPA 8270C
2-Naphthylamine	EPA 8270C
2-Nitroaniline	EPA 8270C
3-Nitroaniline	EPA 8270C
4-Chloroaniline	EPA 8270C
4-Nitroaniline	EPA 8270C
5-Nitro-o-toluidine	EPA 8270C
Aniline	EPA 8270C
Carbazole	EPA 8270C
Diphenylamine	EPA 8270C
Methapyriline	EPA 8270C
Pronamide	EPA 8270C
Propionitrile	EPA 8260B
Pyridine	EPA 8260B
	EPA 8270C
Benzidines	
3,3' -Dichlorobenzidine	EPA 625
	EPA 8270C
Benzidine	EPA 625
	EPA 8270C
Carbamate Pesticides	
Carbaryl	EPA 1978, p.94
Chlorinated Hydrocarbon Pesticides	
4,4'-DDD	EPA 608
	EPA 8081A
4,4'-DDE	EPA 608
	EPA 8081A
4,4'-DDT	EPA 608
	EPA 8081A
Aldrin	EPA 608
	EPA 8081A
alpha-BHC	EPA 608
	EPA 8081A
alpha-Chlordane	EPA 8081A
beta-BHC	EPA 608
	EPA 8081A
Captan	SM 18-20 6630B
Chlordane Total	EPA 608

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER
Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Expires 12:01 AM April 01, 2007
Issued April 1, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. PAUL BATISTA
ADIRONDACK ENVIRONMENTAL SERVICES INC
314 NORTH PEARL STREET
ALBANY, NY 12207

NY Lab Id No: 10709
EPA Lab Code: NY00063

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Polynuclear Aromatics	
3-Methylcholanthrene	EPA 8270C
7,12-Dimethylbenzyl (a) anthracene	EPA 8270C
Acenaphthene	EPA 625
	EPA 8270C
Acenaphthylene	EPA 625
	EPA 8270C
Anthracene	EPA 625
	EPA 8270C
Benzo(a)anthracene	EPA 625
	EPA 8270C
Benzo(a)pyrene	EPA 625
	EPA 8270C
Benzo(b)fluoranthene	EPA 625
	EPA 8270C
Benzo(ghi)perylene	EPA 625
	EPA 8270C
Benzo(k)fluoranthene	EPA 625
	EPA 8270C
Chrysene	EPA 625
	EPA 8270C
Dibenzo(a,h)anthracene	EPA 625
	EPA 8270C
Fluoranthene	EPA 625

Polynuclear Aromatics	
Fluoranthene	EPA 8270C
Fluorene	EPA 625
	EPA 8270C
Indeno(1,2,3-cd)pyrene	EPA 625
	EPA 8270C
Naphthalene	EPA 625
	EPA 8270C
Phenanthrene	EPA 625
	EPA 8270C
Pyrene	EPA 625
	EPA 8270C
Priority Pollutant Phenols	
2,3,4,6 Tetrachlorophenol	EPA 8270C
2,4,5-Trichlorophenol	EPA 8270C
2,4,6-Trichlorophenol	EPA 604
	EPA 625
	EPA 8270C
2,4-Dichlorophenol	EPA 604
	EPA 625
	EPA 8270C
2,4-Dimethylphenol	EPA 604
	EPA 625
	EPA 8270C

Serial No.: 29064

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

Issued April 1, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

DR. TIMOTHY S. OOSTDYK
LANCASTER LABORATORIES INC
2425 NEW HOLLAND PIKE
LANCASTER, PA 17601-5994

NY Lab Id No: 10670
EPA Lab Code: PA00009

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES POTABLE WATER
All approved analytes are listed below:

Drinking Water Metals III	
Sodium, Total	EPA 200.7
Drinking Water Miscellaneous	
Benzo(a)pyrene	EPA 525.2
Bis(2-ethylhexyl) phthalate	EPA 525.2
Butachlor	EPA 525.2
Hexachlorobenzene	EPA 508
	EPA 525.2
Hexachlorocyclopentadiene	EPA 508
	EPA 525.2
Methyl tert-butyl ether	EPA 524.2
Propachlor	EPA 525.2
Temperature	SM 18-20 2550B
Drinking Water Non-Metals	
Alkalinity	SM 18-20 2320B
Calcium Hardness	EPA 200.7
Color	EPA 110.2
Cyanide, Total	EPA 335.4
Fluoride, Total	EPA 300.0
	SM 18-20 4500-F C
Hydrogen Ion (pH)	EPA 150.1
Nitrate (as N)	EPA 300.0
	EPA 353.2

Drinking Water Non-Metals	
Nitrite (as N)	EPA 300.0
	EPA 353.2
Solids, Total Dissolved	SM 18-20 2540C
Specific Conductance	SM 18-20 2510B
Drinking Water Organohalide Pesticides	
Alachlor	EPA 507
	EPA 525.2
Aldrin	EPA 508
	EPA 525.2
Atrazine	EPA 507
	EPA 525.2
Chlordane Total	EPA 508
Dieldrin	EPA 508
	EPA 525.2
Endrin	EPA 508
	EPA 525.2

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

DR. TIMOTHY S. OOSTDYK
LANCASTER LABORATORIES INC
2425 NEW HOLLAND PIKE
LANCASTER, PA 17601-5994

NY Lab Id No: 10670
EPA Lab Code: PA00009

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Purgeable Aromatics	
Ethyl benzene	EPA 8260B
Styrene	EPA 8021B
	EPA 8260B
Toluene	EPA 602
	EPA 624
	EPA 8021B
	EPA 8260B
Total Xylenes	EPA 602
	EPA 624
	EPA 8021B
	EPA 8260B
Purgeable Halocarbons	
1,1,1,2-Tetrachloroethane	EPA 8260B
1,1,1-Trichloroethane	EPA 601
	EPA 624
	EPA 8021B
	EPA 8260B
1,1,2,2-Tetrachloroethane	EPA 601

Laboratory Director: **JAMES H. DODSWORTH**

for the analysis of **NON POTABLE WATER (CHEMISTRY)**

pursuant to 310 CMR 42.00

This certificate supersedes all previous Massachusetts certificates issued to this laboratory. The laboratory is regulated by and shall be responsible for being in compliance with Massachusetts regulations at 310 CMR 42.00.

This certificate is valid only when accompanied by the latest dated Certified Parameter List as issued by the Massachusetts D.E.P. Contact the Division of Environmental Analysis to verify the current certification status of the laboratory.

Certification is no guarantee of the validity of the data. This certification is subject to unannounced laboratory inspections.

Issued: **20 NOV 2006**

Expires: **30 JUN 2007**

Dear Mr. Dodsworth:

Enclosed are a revised Massachusetts environmental laboratory certificate and list of certified parameters for your laboratory. The certificate and certified parameter list reflect the changes in scope of certification that were requested by Ms. Adrinnia Washington in her letter to us that we received on November 22, 2006.

If you have any questions regarding the Massachusetts Laboratory Certification Program, please contact this office.

Sincerely,

Ann Marie Allen
Director, Laboratory Certification Office

WADSWORTH CENTER
Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Expires 12:01 AM April 01, 2007
Issued September 15, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. NILS K. MELBERG
PACE ANALYTICAL SERVICES, INC - GREEN BAY # 2
1795 INDUSTRIAL DRIVE
GREEN BAY, WI 54302

NY Lab Id No: 11887
EPA Lab Code: W101104

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES NON POTABLE WATER
All approved analytes are listed below:

Purgeable Halocarbons	
1,1,1-Trichloroethane	EPA 624
	EPA 8260B
1,1,2,2-Tetrachloroethane	EPA 624
	EPA 8260B
1,1,2-Trichloroethane	EPA 624
	EPA 8260B
1,1-Dichloroethane	EPA 624
	EPA 8260B
1,1-Dichloroethene	EPA 624
	EPA 8260B
1,1-Dichloropropene	EPA 8260B
1,2,3-Trichloropropane	EPA 8260B
1,2-Dichloroethane	EPA 624
	EPA 8260B
1,2-Dichloropropane	EPA 624
	EPA 8260B
1,3-Dichloropropane	EPA 8260B
2,2-Dichloropropane	EPA 8260B
2-Chloro-1,3-butadiene (Chloroprene)	EPA 8260B
2-Chloroethylvinyl ether	EPA 624
	EPA 8260B
3-Chloropropene (Allyl chloride)	EPA 8260B
Bromochloromethane	EPA 8260B

Purgeable Halocarbons	
Bromodichloromethane	EPA 624
	EPA 8260B
Bromoform	EPA 624
	EPA 8260B
Bromomethane	EPA 624
	EPA 8260B
Carbon tetrachloride	EPA 624
	EPA 8260B
Chloroethane	EPA 624
	EPA 8260B
Chloroform	EPA 624
	EPA 8260B
Chloromethane	EPA 624
	EPA 8260B
cis-1,2-Dichloroethene	EPA 8260B
cis-1,3-Dichloropropene	EPA 624
	EPA 8260B
cis-1,4-Dichloro-2-butene	EPA 8260B
Dibromochloromethane	EPA 624
	EPA 8260B
Dibromomethane	EPA 8260B
Dichlorodifluoromethane	EPA 8260B
Methylene chloride	EPA 624

	EPA 9034

Serial No.: 30872

Property of the New York State Department of Health. Valid only at the address shown. Must be conspicuously posted. Valid certificates have a raised seal. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify laboratory's accreditation status.

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER
Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Expires 12:01 AM April 01, 2007
Issued September 15, 2006
Revised September 25, 2006

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. NILS K. MELBERG
PACE ANALYTICAL SERVICES, INC. - GREEN BAY #1
1241 BELLEVUE STREET
GREEN BAY, WI 54302

NY Lab Id No: 11888
EPA Lab Code: WI01103

is hereby APPROVED as an Environmental Laboratory in conformance with the National Environmental Laboratory Accreditation Conference Standards for the category ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved analytes are listed below:

Amines	
1,2-Diphenylhydrazine	EPA 8270C
2-Nitroaniline	EPA 8270C
3-Nitroaniline	EPA 8270C
4-Chloroaniline	EPA 8270C
4-Nitroaniline	EPA 8270C
Aniline	EPA 8270C
Carbazole	EPA 8270C
Benzidines	
3,3' -Dichlorobenzidine	EPA 8270C
Benzidine	EPA 8270C
Characteristic Testing	
Corrosivity	EPA 9040B
Ignitability	EPA 1010
TCLP	EPA 1311
Chlorinated Hydrocarbons	
1,2,4-Trichlorobenzene	EPA 8270C
2-Chloronaphthalene	EPA 8270C
Hexachlorobenzene	EPA 8270C
Hexachlorobutadiene	EPA 8270C
Hexachlorocyclopentadiene	EPA 8270C
Hexachloroethane	EPA 8270C
Haloethers	
4-Bromophenylphenyl ether	EPA 8270C
4-Chlorophenylphenyl ether	EPA 8270C
Bis (2-chloroisopropyl) ether	EPA 8270C
Bis(2-chloroethoxy)methane	EPA 8270C
Bis(2-chloroethyl)ether	EPA 8270C
Metals I	
Barium, Total	EPA 6010B
	EPA 6020
Cadmium, Total	EPA 6010B
	EPA 6020
Calcium, Total	EPA 6010B
Chromium, Total	EPA 6010B
	EPA 6020
Copper, Total	EPA 6010B
	EPA 6020
Iron, Total	EPA 6010B
Lead, Total	EPA 6010B
	EPA 6020
Magnesium, Total	EPA 6010B
Manganese, Total	EPA 6010B
	EPA 6020
Nickel, Total	EPA 6010B
	EPA 6020

Serial No.: 30901

Nitroaromatics and Isophorone	
Nitrobenzene	EPA 8270C
Pyridine	EPA 8270C
Nitrosoamines	
N-Nitrosodimethylamine	EPA 8270C
N-Nitrosodi-n-propylamine	EPA 8270C
N-Nitrosodiphenylamine	EPA 8270C
Nutrients	
Nitrate (as N)	EPA 9056
Nitrite (as N)	EPA 9056
Phthalate Esters	
Benzyl butyl phthalate	EPA 8270C
Bis(2-ethylhexyl) phthalate	EPA 8270C
Diethyl phthalate	EPA 8270C
Dimethyl phthalate	EPA 8270C
Di-n-butyl phthalate	EPA 8270C
Di-n-octyl phthalate	EPA 8270C
Polynuclear Aromatic Hydrocarbons	
Acenaphthene	EPA 8270C
Acenaphthylene	EPA 8270C
Anthracene	EPA 8270C
Benzo(a)anthracene	EPA 8270C
Polynuclear Aromatic Hydrocarbons	
Benzo(a)pyrene	EPA 8270C
Benzo(b)fluoranthene	EPA 8270C
Benzo(ghi)perylene	EPA 8270C
Benzo(k)fluoranthene	EPA 8270C
Chrysene	EPA 8270C
Dibenzo(a,h)anthracene	EPA 8270C
Fluoranthene	EPA 8270C
Fluorene	EPA 8270C
Indeno(1,2,3-cd)pyrene	EPA 8270C
Naphthalene	EPA 8270C
Phenanthrene	EPA 8270C
Pyrene	EPA 8270C
Priority Pollutant Phenols	
2,4,5-Trichlorophenol	EPA 8270C
2,4,6-Trichlorophenol	EPA 8270C
2,4-Dichlorophenol	EPA 8270C
2,4-Dimethylphenol	EPA 8270C
2,4-Dinitrophenol	EPA 8270C
2,6-Dichlorophenol	EPA 8270C
2-Chlorophenol	EPA 8270C
2-Methyl-4,6-dinitrophenol	EPA 8270C
2-Methylphenol	EPA 8270C
2-Nitrophenol	EPA 8270C

Serial No.: 30901
