RE: Updated boundary recommendations for SO₂ nonattainment areas in Kentucky

Dear Ms. Fleming:

In accordance with Section 107 (d)(1)(A) of the Clean Air Act, states must submit to U.S. EPA, within one year following promulgation of a new or revised National Ambient Air Quality Standard, a list of all areas in the state, recommending designations for each as attainment, nonattainment, or unclassifiable with respect to a new or revised standard for a pollutant.

In a letter dated June 2, 2011, Kentucky recommended that all counties except Jefferson be classified as attainment/unclassifiable and Jefferson County be designated nonattainment for the SO₂ standard. After further discussions with staff at U.S. EPA Region 4, the Louisville Metro Air Pollution Control District (APCD) performed additional analyses to more precisely define the area of Jefferson County to be designated nonattainment. The analysis is provided with this letter. Kentucky concurs with this review and requests that the recommended boundary for SO₂ nonattainment be the triangular portion of Jefferson County that is south of Watson Lane, west of Dixie Highway (US60 and US31W), east of the Ohio River, and north of the adjacent property lines of LG&E-Mill Creek Station and Kosmos Cement, pursuant to the information provided with this letter. Kentucky recommends that the remainder of Jefferson be classified as attainment/unclassifiable.

Your prompt attention to this letter is appreciated. If you have any questions or comments concerning this matter, please contact Andrea Smith at the Division for Air Quality at (502) 564-3999.

Sincerely,

A handwritten signature in black ink, appearing to read "L.K. Peters".

Leonard K. Peters
Secretary

Louisville/Jefferson County, Kentucky 1-Hour SO₂ Nonattainment Boundary Recommendation

Recommendation:

The Louisville Metro Air Pollution Control District (APCD) recommends that the “triangular” portion of Jefferson County that is south of Watson Lane, west of Dixie Highway (US60 and US31W), east of the Ohio River, and north of the adjacent property lines of Louisville Gas and Electric - Mill Creek Electric Generating Station and Kosmos Cement, be designated nonattainment for the 1-hour sulfur dioxide (SO₂) standard.

Discussion:

The SO₂ monitor at Watson Lane Elementary has a three year design value, based on 2008-2010 data, of 112.0 parts per billion (ppb). The monitor is located at 7201 Watson Lane, Louisville, Kentucky. It was established in 1992 as a population-exposure-based ambient air monitoring site. It is generally upwind of a majority of the stationary sources in the county that emit SO₂. For purposes of determining the nonattainment boundary, SO₂ is presumed to arise from direct emissions with concentrations highest relatively close to the source(s) and much lower at greater distances due to dispersion. See March 23, 2011 Memo from U.S. EPA, “Area Designations for the 2010 Revised Primary Sulfur Dioxide National Ambient Air Quality Standards,” (Guidance). Because of this, and based on the five factor analysis in the Guidance, Kentucky has determined that less than the full county should be designated nonattainment. These factors, which are discussed below, are: 1) air quality data; 2) emissions-related data; 3) meteorology; 4) geography/topography; and 5) jurisdictional boundaries.

I. Air Quality Data

Currently, APCD operates three SO₂ monitors in Jefferson County, Kentucky: Firearms Training at Algonquin Parkway (21-111-1041), Cannons Lane (21-111-0067), and Watson Lane (21-111-051). The Indiana Department of Environmental Management (IDEM) operates one in Floyd County, Indiana on Green Valley Road (18-043-1004).

Attainment of the SO₂ standard is achieved when the 3-year average of the 99th percentile annual distribution of the daily maxima is less than or equal to 75 ppb. Table 1 below provides those values and design values based on 2007-2011 (year-to-date*) data. The data for these monitors can be found in Appendix A.

Table 1. SO₂ Annual 99th Percentiles and Annual Design Values

Site name	Annual 99th Percentiles (ppb)					Annual Design Values (ppb)		
	2007	2008	2009	2010	2011	2007-2009	2008-2010	2009-2011*
Watson Lane	123	113	116	107	114	117.3	112.0	112.3
Firearms Training	171	122	96	100	34.1	129.7	106.0	76.7
Cannons Lane**	-	-	-	45	44.6	-	45	44.8
Green Valley Road	194	138	125	123	26.4	152.3	128.7	91.5

**Sampling began 05-26-2010

Of the four monitors listed in the table above, three have design values greater than 75 ppb for 2008-2010: Watson Lane, Firearms Training, and Green Valley Road. The Cannons Lane station does not have a violating monitor and is not included in this discussion.

II. SO₂ Emissions Data

The table below lists the nine Jefferson County, Kentucky stationary sources reporting over ten tons per year (tpy) of sulfur dioxide, plus Duke Energy's Gallagher Electric Generating Station in New Albany, Indiana.

Table 2. SO₂ Emissions Data (2010)

Pin ¹	Plant / Facility Site Name	EIS Site ID	SO ₂ , tons per year
A	Louisville Gas & Electric - Mill Creek	7353711	27,135.00
B	Louisville Gas & Electric - Cane Run	5702411	9,487.80

¹See Map A.

²2008 emissions data

Map A depicts the locations of Jefferson County, KY and Floyd County, IN SO₂ monitoring sites and stationary sources. A discussion of monitoring and stationary source data follows.

Of the SO₂ sources listed in Table 2, seven (Louisville Gas & Electric - Cane Run, Louisville Medical Center Steam Plant, Brown Forman/Early Times, American Synthetic Rubber Company, U of L Belknap Campus, Rohm and Haas Company, and Carbide Industries) are located in the northern portion of Jefferson County and account for 10,471.45 tons, or 27.7 percent, of the 37,827.07 total tpy generated by Kentucky sources. Four sources (Brown Forman/Early Times, American Synthetic Rubber Company, Rohm and Haas Company, and

Carbide Industries) are located within approximately three miles of the Firearms Training monitoring site; however, their total combined emissions of SO₂ are only 443.64 tpy. These four sources are small and we do not believe they contribute to violations at the Firearms Training monitoring site, based on the meteorology wind rose data discussed in Section III.

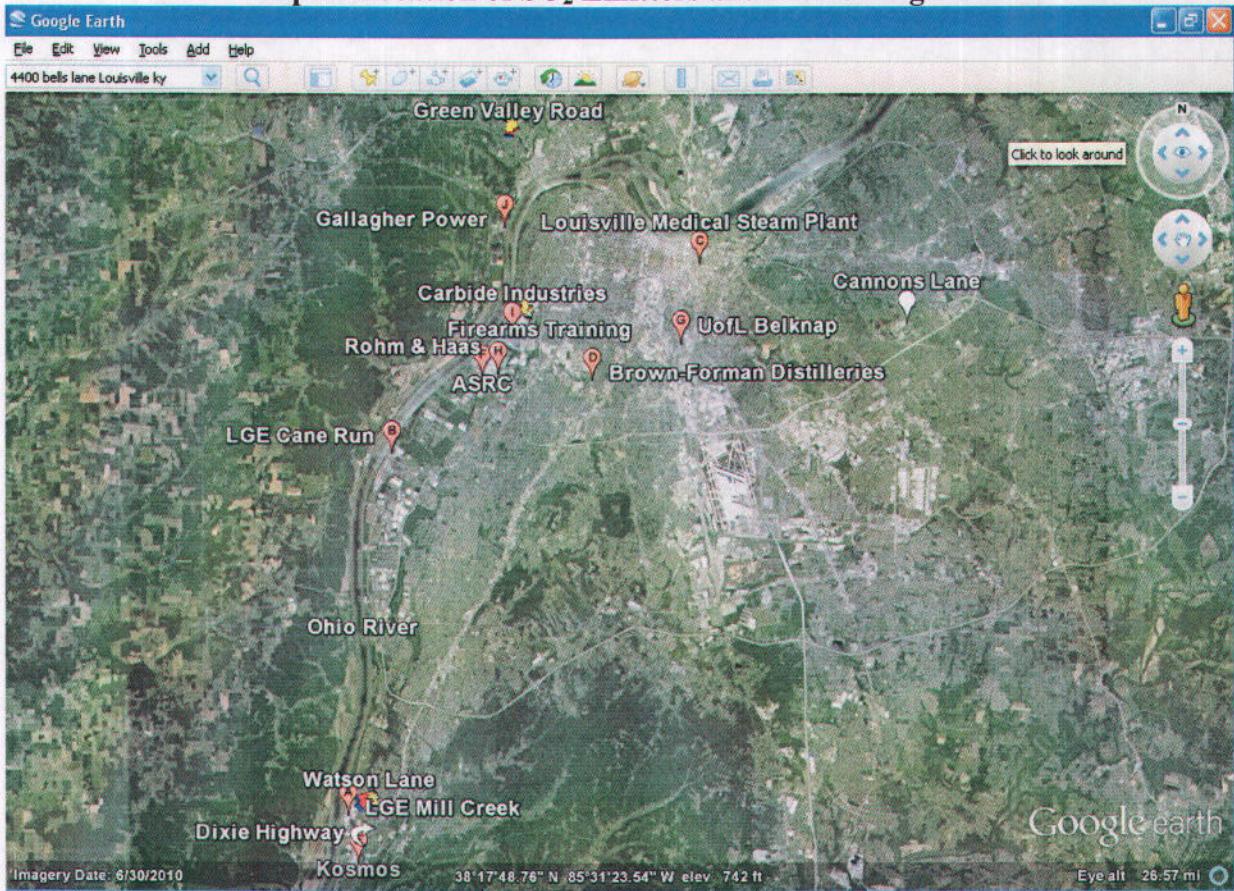

Monitored 2008-2010 exceedances at the Firearms Training monitoring site appear to come from upwind sources situated north by northwest of the SO₂ instrument location. There are no Kentucky sources located north of that monitoring site that contribute to its exceedances. See Map A. As a result, this portion of the county would have attained the standard but for the contribution of upwind sources. Kentucky has identified the Gallagher Generating Station in New Albany, IN as the primary upwind source of SO₂ emissions for the years in question.

An additional review of SO₂ monitoring data for only year-to-date 2011 at the Firearms Training and Green Valley sites indicates that there have been no 1-hour SO₂ exceedances for this year. When 2011's monitoring data for the two sites are certified, we anticipate that, with the existing control measures in place and additional ones to be implemented, neither monitor will be in violation of the 1-hour SO₂ standard at the end of 2012.

In May 2009, a federal jury found that Duke made illegal modifications to Gallagher Units 1 and 3 that caused significant increases in SO₂. The company made these modifications without first complying with pre-construction obligations, including obtaining pre-construction permits and installing and operating state-of-the-art pollution control technology, in violation of the Clean Air Act (CAA) Nonattainment New Source Review and Prevention of Significant Deterioration provisions, 42 U.S.C. §§ 7470-7492, 7501-7515, and the Indiana State Implementation Plan.

The consent decree secures injunctive relief at all four units at the Gallagher Plant even though only Units 1 and 3 were found to be in violation of the CAA. The settlement is anticipated to reduce SO₂ emissions at the Gallagher Plant by about 35,000 tons per year, an 86.6 percent reduction when compared to 2008 emissions. Duke must commit to shut down or convert Units 1 and 3 to burn natural gas instead of coal by January 1, 2012. If Duke elects to shut down the units, they must be retired from operation by February 1, 2012. Duke was also required to put dry sorbent injection (DSI) on all four units for SO₂ control. They implemented that control measure in January, 2011. Baghouses have also been added to the four units.

Map A. Location of SO₂ Emitters and Monitoring Sites

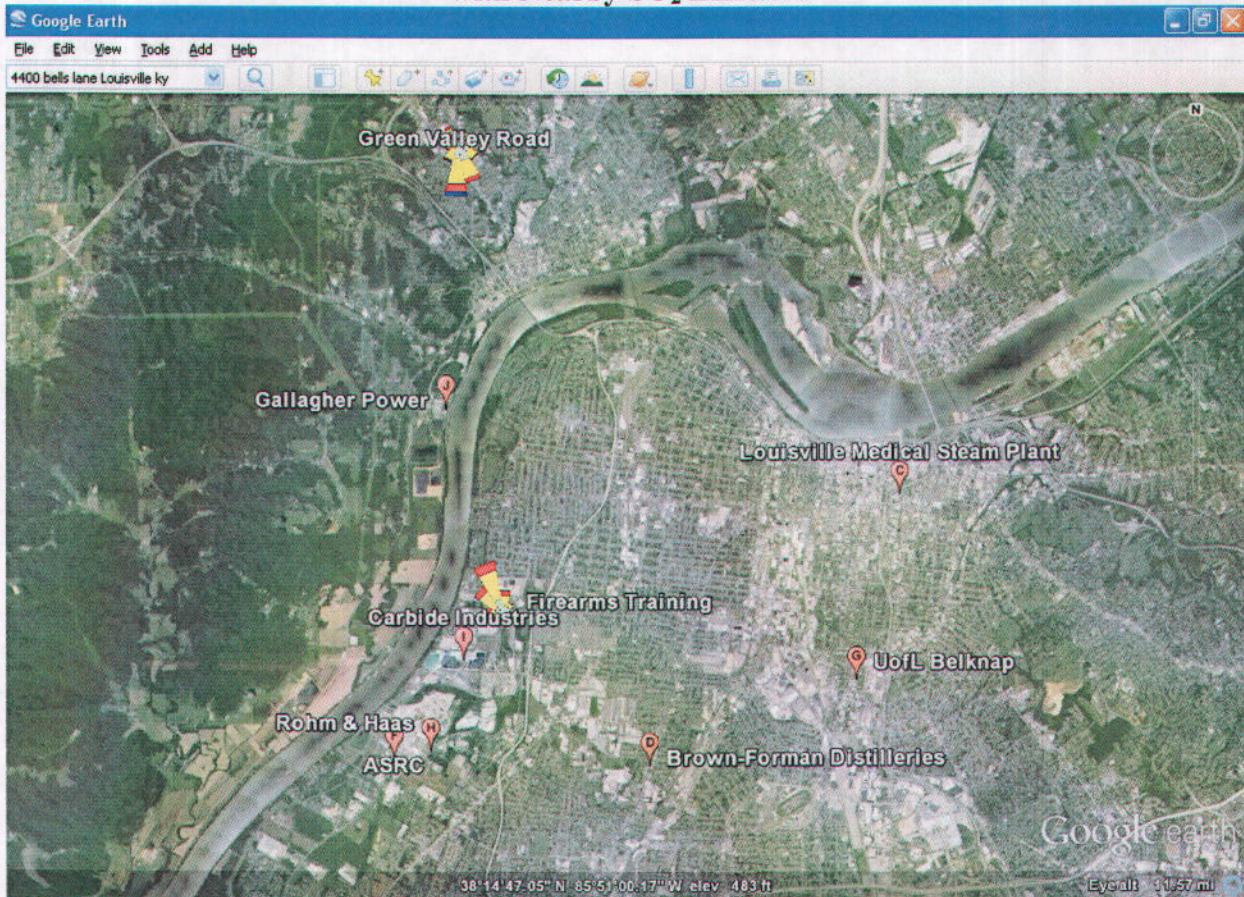

III. Meteorology

We reviewed 1-hour SO₂ 2008-2010 exceedances for Watson Lane, Firearms Training, and Green Valley monitoring sites. For each hourly exceedance, corresponding wind data was obtained and mapped. (Source: 2006-2010 processed meteorological data for Louisville using Wilmington OH upper air and 1-minute ASOS data.)

Map B illustrates SO₂ hourly average exceedance wind rose plots for the Firearms Training, and Green Valley monitors. Of the 29 days of SO₂ exceedances at Firearms Training and 47 at Green Valley, only two days were identical: 01/03/2008 and 03/12/2008. These plots clearly indicate that the exceedances of the SO₂ standard occurred from the largest upwind source, the Gallagher Generating Station located in New Albany, IN.

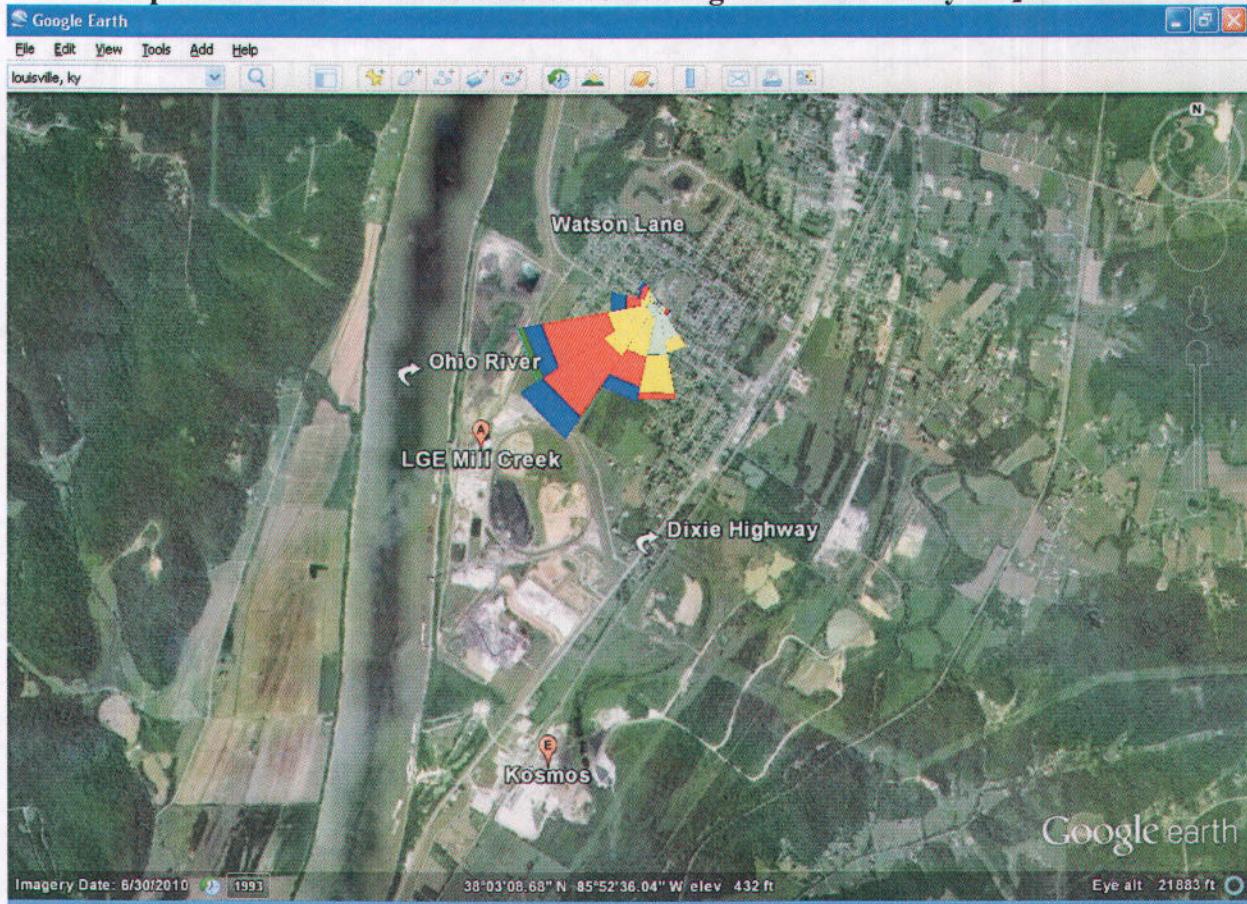

Map B. Location of Firearms Training and Green Valley Monitoring Sites with Nearby SO₂ Emitters

Map C illustrates the SO₂ hourly average exceedance wind rose plot for the Watson Lane SO₂ monitor. This plot indicates that there may be two sources (Louisville Gas & Electric, Mill Creek and Kosmos Cement) that contribute to the exceedances of the SO₂ standard. After further analysis of those emissions sources and a comparison to a similar emissions source (Brown Forman, Early Times) near the Firearms Training monitoring site, we determined that Kosmos Cement contributes a negligible amount, <1 percent, of the SO₂ emissions. Because Firearms Training has had no exceedances in 2011, we believe that Kosmos Cement is not a significant contributor to the Watson Lane monitor exceedances and violation.

The recommended nonattainment area in Map D includes the largest sulfur dioxide source, Louisville Gas and Electric Company's Mill Creek Electric Generating Station. This one source produces 71.7 percent of all stationary source SO₂ emissions in Jefferson County, Kentucky. The wind rose plot clearly indicates that the Watson Lane exceedances of the SO₂ standard result from emissions from this stationary source, particularly because its stacks are located less than one mile away from the monitoring location.

Map C. Location of Watson Lane Monitoring Site with Nearby SO₂ Emitters

IV. Geography/Topography

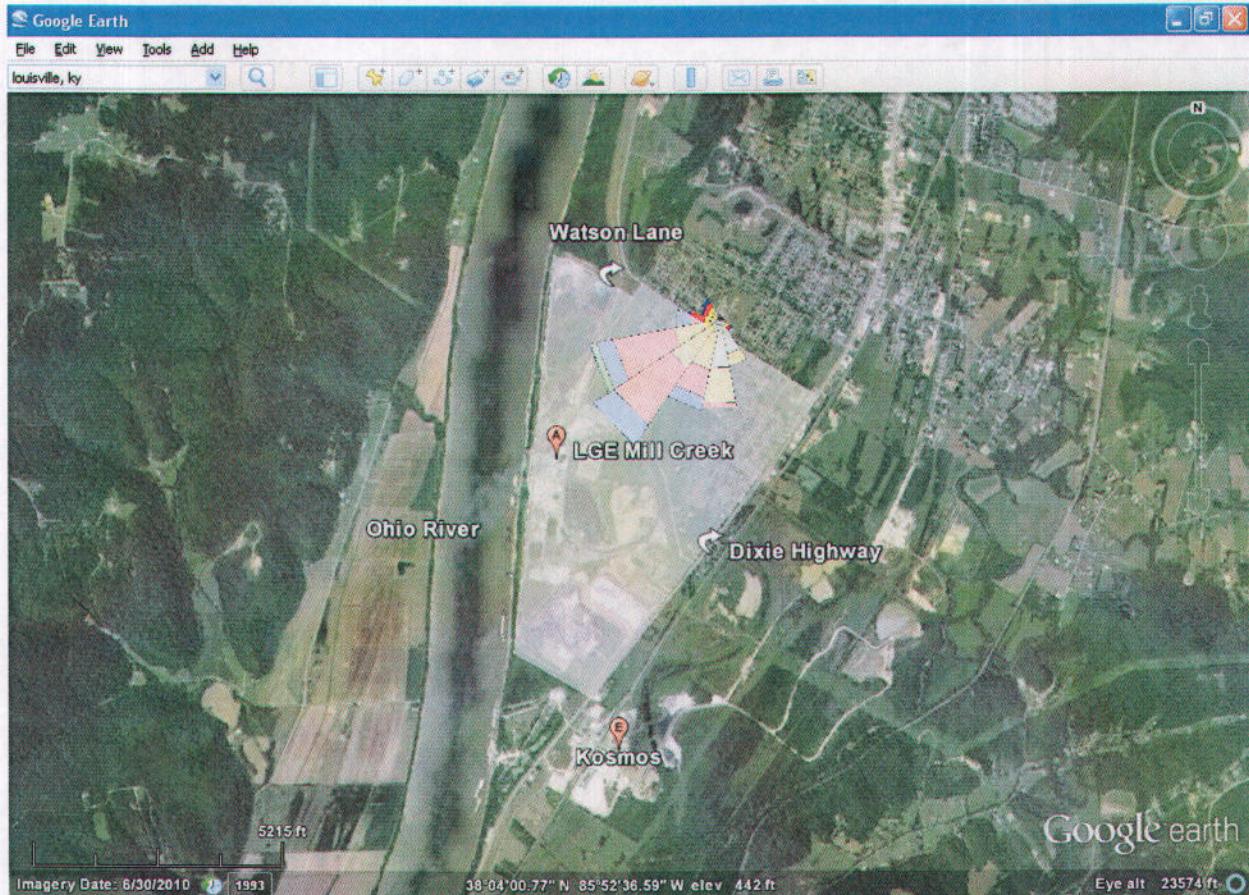

As shown on Maps B and C, neither topography nor geography play a role in the violations at the Firearms Training or Watson Lane monitoring sites.

The boundary of the recommended nonattainment area is influenced by the Louisville Gas and Electric, Mill Creek Electric Generating Station, which produces 71.7 percent of all stationary source SO₂ emissions in Jefferson County, Kentucky

V. Jurisdictional Boundary

The USEPA guidance requested clearly defined legal boundaries for carrying out air quality planning and enforcement functions for the nonattainment area. Where boundaries are not adequate to describe the nonattainment area, other clearly defined and permanent landmarks or geographic coordinates may be used. In this case we are using jurisdictional, legal, and permanent landmarks which create a nonattainment area "triangular" in shape. Two roads will be used as boundaries: Watson Lane which runs at a northwesterly angle from the other, Dixie Highway (US60 and US31W). One jurisdictional boundary will be used: to the west, the Ohio River. The last boundary will be the adjacent property lines of Louisville Gas and Electric - Mill Creek Electric Generating Station and Kosmos Cement to the south. The shaded area in Map D illustrates the proposed nonattainment boundary.

Map D. Location of Proposed SO₂ Nonattainment Boundary

Conclusion:

After analyzing the five factors outlined in the Guidance, we recommend that the “triangular” portion of Jefferson County that is south of Watson Lane, west of Dixie Highway (US60 and US31W), east of the Ohio River, and north of the adjacent property lines of Louisville Gas and Electric - Mill Creek Electric Generating Station and Kosmos Cement, be designated nonattainment for the 1-hour SO₂ standard.
