EMTS v4.3 Release Notes

1. Introduction

The EPA Moderated Transaction System (EMTS) version 4.3 includes performance optimizations, bug fixes, and minor changes to functionality, as described below.

2. Fuels Averaging, Banking, and Trading (ABT) Functionality

The following modifications have been made to the EMTS module for the Fuels ABT credit program. This functionality is only visible to users that are associated with a gasoline refiner or importer company and also have the role of "Fuels ABT Submitter" or "Fuels ABT Viewer" in the OTAQ Registration system.

A. Generating Benzene Credits

- When generating Benzene credits, users are now able to report an Average Benzene Concentration of "0."

B. Generating All Credits

- When calculating the "Credit Quantity" for sulfur and benzene credits, the rounding standards now meet ASTM E29-02 standards.

3. Renewable Fuel Standard (RFS) Functionality

A. Remedial Actions to Correct RIN Over-Generations

- Checks were added to ensure that all remedial action transactions to correct RIN over-generation errors were authorized by EPA.
