

2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy

Presented here is the *PROPOSED FINAL New York State 2016 Section 303(d) List of Impaired/TMDL Waters*. The list identifies those waters that do not support appropriate uses and that require development of a Total Maximum Daily Load (TMDL) or other restoration strategy. This Proposed Final List has been submitted to USEPA for review and approval. A Response Summary addressing public comments received regarding the previously issued Draft List is also available.

The Federal Clean Water Act requires states to periodically assess and report on the quality of waters in their state. Section 303(d) of the Act also requires states to identify *Impaired Waters*, where specific designated uses are not fully supported, and for which the state must consider the development of a *Total Maximum Daily Load (TMDL)* or other strategy to reduce the input of the specific pollutant(s) that restrict waterbody uses, in order to restore and protect such uses. An outline of the process used to monitor and assess the quality of New York State waters is contained in the New York State *Consolidated Assessment and Listing Methodology (CALM)*. The CALM describes the water quality assessment and Section 303(d) listing process in order to improve the consistency of assessment and listing decisions.

The waterbody listings in the New York State Section 303(d) List are grouped into a number of categories. The various categories, or Parts, of the list are outlined below.

The 2016 Section 303(d) List of Impaired Waters Requiring a TMDL

Part 1 Individual Waterbody Segments with Impairments Requiring TMDL Development

These are waters with verified impairments that are expected to be addressed by a segment/pollutant-specific TMDL.

Part 2 Multiple/Categorical Waterbody Segments with Impairment Requiring TMDL Development

These are groups of waters affected by similar causes/sources where a single TMDL may be able to address multiple waters with the same issue. Part 2 is subdivided into:

- a) Waterbody Segments Impaired by Atmospheric Deposition/Acid Rain
- b) Waterbody Segments Impaired due to Fish Consumption Advisories
- c) Waterbody Segments Impaired due to Shellfishing Restrictions

Part 3 Waterbodies for which TMDLs are/may be Deferred

These are waters where the development of a TMDL may be premature and may be deferred pending further verification of the suspected impairment, verification for the cause/pollutant/source, or the evaluation of TMDL alternatives. Part 3 is subdivided into:

- a) Waterbodies Requiring Verification of Impairment
- b) Waterbodies Requiring Verification of Cause/Pollutant/Source
- c) Waterbodies Awaiting Development/Evaluation of Other Restoration Measures

Appendix A – Smaller Lakes Impaired by Atmospheric Deposition (Acid Rain)

Appendix B – Listed Waterbodies Not Meeting Dissolved Oxygen Standards

Impaired/Delisted Waters NOT Included on the Section 303(d) List

Not all impaired waters of the state are included on the Section 303(d) List. By definition, the List is to be comprised of impaired waters *that require development of a Total Maximum Daily Load (TMDL) plan*. Although separate from the Section 303(d) List, a compilation of waterbody/pollutants representing those impairments that are not included on the List provides additional information toward understanding listing decisions and clarifies how impairments are considered.

Waterbody Segments Not Listed Because TMDL is Not Necessary (separate list, **TBD**)

A list of *Other Impaired Waterbody Segments Not Listed (on 303(d) List) Because Development of a TMDL is Not Necessary* is available to facilitate the review of Section 303(d) List. The purpose of this supplement is to provide a more comprehensive inventory of waters of the state that do not fully support designated uses and that are considered to be impaired. **Note: The current version of this list is the 2014 version; the list will be updated upon approval of the 2016 Section 303(d) List.**

Section 303(d) of the Clean Water Act stipulates that impaired waters that do not require a TMDL are not to be included on the Section 303(d) List. There are three (3) justifications for not including an impaired water on the Section 303(d) List:

Category 4a Waters - TMDL development is not necessary because a TMDL has already been established for the segment/pollutant.

Category 4b Waters - TMDL is not necessary because other required control measures are expected to result in restoration in a reasonable period of time.

Category 4c Waters - TMDL is not appropriate because the impairment is the result of pollution, rather than a pollutant that can be allocated through a TMDL.

Waterbody/Pollutant Delistings (separate list)

A separate list of water/pollutant combinations that were included on the previous Section 303(d) List, but that are NOT included on the current List is also available. This listing provides some linkage and continuity between the previous and proposed new Lists. The specific reason why a waterbody/pollutant no longer appears on the List (i.e., delisting action, reassessment, re-segmentation, etc.) is included in this document. Some of these waters (those that have been delisted but that remain *Impaired*) also appear on the list of *Other Impaired Waterbody Segments Not Listed Because Development of a TMDL is Not Necessary*.

Water Index Number	Waterbody Name (WI/PWL ID)	County	Type	Class	Cause/Pollutant	Suspected Source	Year
--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

2016 Section 303(d) List of Impaired Waters

Segments and/or pollutants listed in **Bold Type** are new listings; i.e., they were not included in the previous (2014) Section 303(d) List.

***/+ Denotes Priority Waters for TMDL/restoration strategy scheduled for development in 2016 (*) and over longer term, through 2022 (+).**

¹ Waters exceeding the New York State Water Quality Standard for dissolved oxygen are listed for *Oxygen Demand* if a specific oxygen demanding pollutant has not been identified.

² This waterbody was previously also listed for *Oxygen Demand*. However since the waterbody is listed for the specific oxygen demanding substance (*Phosphorus*) identified as causing the low dissolved oxygen impairment, the *Oxygen Demand* listing was redundant and has been removed. Future waterbodies impaired by low dissolved oxygen will be listed for the specific pollutant related to the oxygen demand (typically phosphorus or nitrogen), rather than listed for oxygen demand. Listings for *Oxygen Demand* will continue if identification of the specific oxygen demanding substance has not been identified.

C-134- 4	Wood Cr/Champlain Canal and tribs (1005-0036)	Washington	River	C	Pathogens	Municipal, SSOs	2010

⁴ The Restoration Strategy/TMDL effort to address silt/sediment loads to Lake George will be a comprehensive, lake-wide watershed effort and will consider additional lake tributaries that provide significant silt/sediment loads to the lake. The initial strategy focused on Finkle Brook and was public noticed for comment in 2005.

⁵ The specifically identified impaired water(s) in this segment include Foster Brook (-11).

⁶ The specifically identified impaired water(s) in this segments include East Brook (-37), West Brook (-38), Prospect Mountain Brook (-39), English Brook (-41).

⁷ The specifically identified impaired water(s) in this segment include Finkle Brook (-56).

¹⁷ The specifically identified impaired water(s) in this segment also include unnamed pond (P432).

¹⁸ The specifically identified impaired water(s) in this segment include Sunday Creek (-20); the Beaver River is not considered to be impaired.

¹⁹ The specifically identified impaired water(s) in this segment also include Ikeis Pond (P438).

²⁰ The specifically identified impaired water(s) in this segment include unnamed pond (P569); Rose Pond is not considered to be impaired.

²¹ The specifically identified impaired water(s) in this segment include Bradley Brook and Cellar Brook; the South Branch Moose River is not considered to be impaired.

²² The specifically identified impaired water(s) in this segment include Bald Mountain Brook (-P739-3); the North Branch Moose River is not considered to be impaired.

²³ The specifically identified impaired water(s) in this segment include a number of smaller ponds, including unnamed pond (P737); Thirsty Pond is not considered to be impaired.

²⁴ The specifically identified impaired water(s) in this segment include Constable Creek, West Pond Outlet and Squash Pond Outlet.

³² The specifically identified impaired water(s) in this segment also includes previously listed Unnamed Pond #6-323.

³³ Previously listed as Wolf Pond (0904-0002).

³⁴ The specifically identified impaired water(s) in this segment include Saint Germain Pond (P201); Lake Clear is not considered to be impaired.

³⁵ The specifically identified impaired water(s) in this segment include Diamond Lake (P822).

Water Index Number	Waterbody Name (WI/PWL ID)	County	Type	Class	Cause/Pollutant	Suspected Source	Year
--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

Part 2a - Multiple Segment/Categorical Waterbody Segments Impaired by Atmospheric Deposition/Acid Rain (con't)Other/Smaller Lakes Impaired by Atmospheric Deposition (Acid Rain)...See Appendix A

Previous Section 303(d) Lists included additional small lake waterbodies impacted by atmospheric deposition. Because subsequent development of a comprehensive monitoring strategy required limiting the WI/PWL database to lakes 6.4 acres or larger, these smaller lakes are no longer tracked as individual waterbodies in the database. These lakes have been joined with other lakes in the same watershed as a single segment. In order to accommodate these changes regarding the tracking of waterbodies within the WI/PWL database and to provide continuity between this listing and previous lists that included the tracking of the smaller lake as individual waterbodies, a list of *Other/Smaller Lakes Impaired by Atmospheric Deposition* (currently representing 70 lakes/ponds) is included in the 2010 Section 303(d) List and is attached as Appendix A. This appendix lists the smaller lakes that appeared on previous Section 303(d) Lists with a note indicating the WI/PWL segment into which the lake has been consolidated.

--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

Part 2b - Multiple Segment/Categorical Waterbody Segments Impaired due to Fish Consumption Advisories

Might be addressed by a waterbody specific TMDL or a pollutant/source specific TMDL or other strategy to attain water quality standards.

NOTE: Fish consumption advisories/impairments for all waters listed below extend into and include tributary (and downstream) waters to the first impassable barrier.

Ont (portion 2)	Lake Ontario Shoreline, Eastern (0303-0024)	Jefferson	G.Lakes	A	Mirex	Contaminated Sed. ³⁷	1998
Ont (portion 2)	Lake Ontario Shoreline, Eastern (0303-0024)	Jefferson	G.Lakes	A	Dioxin	Contaminated Sed. ³⁷	1998

³⁶ Includes Lewiston Reservoir.

³⁷ For Lake Erie and Lake Ontario Shoreline segments included on the Section 303(d) List due to fish consumption restrictions, the primary source of contamination is the open lake rather than the near-shore waters. Due to fish migration, the advisories apply to tributary waters up to the first impassable barrier.

Ont 19- 81-18-P782a thru d	Fulton Chain Lakes, First thru Fourth Lake (0801-0373) ³⁹	Herkimer	Lake	A	DDT	Cont.Sed., Land Disp	1998

³⁸ As noted at the beginning of Part 2b, fish consumption advisories/impairments for Part 2b waters extend into and include tributary (and downstream) waters to the first impassable barrier. There is some evidence that contamination of fish in Ley Creek extends beyond this barrier, though there is no separate waterbody-specific health advisory for the creek. Consequently, this listing should be considered as including all of Ley Creek.

³⁹ Previously the segment Tribs to Fulton Chain Lakes (0801-0098) which includes Gray Lake Outlet, which is suspected source of DDT contamination/fish consumption advisory in Fourth Lake, was listed for this impairment. But since the health advisory applies to the lake it is more appropriate to list the segment which includes Fourth Lake (0801-0373) with the understanding that for the purposes of Section 303(d) listing, this segment includes the lower portion of Gray Lake Outlet.

⁴² Because development of a comprehensive monitoring strategy required limiting the WI/PWL database to lakes 6.4 acres or larger, these smaller lakes are no longer tracked as individual waterbodies in the WI/PWL database.

⁴³ The specifically identified impaired water(s) in this segment is Seamans Pond (P983) for which a fish consumption advisory is in place.

⁴⁴ Includes former Silver Lake, Lofts Pond (1701-0029) segment, which was previously listed separately. The specifically identified impaired water(s) in this segment is Lofts Pond (P998) for which a fish consumption advisory is in place.

⁴⁵ Includes former Halls Pond (1701-0027) segment, which was previously listed separately. The specifically identified impaired water(s) in this segment is Halls Pond (P1008) for which a fish consumption advisory is in place.

--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

Part 2b - Multiple Segment/Categorical Waterbody Segments Impaired due to Fish Consumption Advisories (con't)

More Information Regarding Fish Consumption

Designation of waters as impaired for fish consumption and inclusion in the Section 303(d) List is based on New York State Department of Health advisories contained in its annual Chemicals in Sportfish and Game publications. Where available water quality data for a waterbody is in conflict with these health advisories, decisions regarding listing will reflect the health advisories. Because the specific extent and conditions of the health advisories are reported more precisely/frequently through these advisories than through the Section 303(d) List, the health advisories provide better delineated and more timely information regarding fish consumption recommendations for the waters of New York than does the Section 303(d) List. For the most current shellfishing certification information, refer to <http://www.health.state.ny.us/environmental/outdoors/fish/fish.htm>

A general health advisory to eat no more than one meal per week of fish from any freshwaters and some marine waters of the state is also in place. NYSDOH has issued this advisory because 1) some chemicals (mercury and PCBs, for example) are commonly found in New York State fish, 2) fish from all waters have not been tested, and 3) fish may contain unidentified contaminants. The general advisory is less restrictive than the waterbody-specific advisories. Because the general advisory is less restrictive, is largely precautionary, and applies to almost all waters of the state, these waters are not listed individually on the Section 303(d) List.

Water Index Number	Waterbody Name (WI/PWL ID)	County	Type	Class	Cause/Pollutant	Suspected Source	Year
--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

Part 2c - Multiple Segment/Categorical Waterbody Segments Impaired due to Shellfishing Restrictions

Might be addressed by a waterbody specific TMDL or a pollutant/source specific TMDL or other strategy to attain water quality standards.

⁴⁶ Some available data indicates water quality improvement, however this data is insufficient to support year-round certification of the waterbody for shellfishing. For Section 303(d) Listing purposes, Class SA waters are considered to be impaired unless they are certified for shellfishing use.

⁴⁷ This segment was previously included in the Middle Bay (1701-0208) segment but is now listed separately. This new listing does not represent any new/additional impairment.

⁴⁸ This segment was previously included in the Hempstead Bay (1701-0032) segment but is now listed separately. This new listing does not represent any new/additional impairment.

Water Index Number Waterbody Name (WI/PWL ID) County Type Class Cause/Pollutant Suspected Source Year

Part 2c - Multiple Segment/Categorical Waterbody Segments Impaired due to Shellfishing Restrictions (con't)

More Information Regarding Shellfishing Impairment Listings

Designation of waters as impaired for shellfishing use and inclusion in the Section 303(d) List is based on shellfishing certifications issued by NYSDEC Shellfisheries Program and the National Shellfish Sanitation Program. Where available water quality data for a waterbody is in conflict with its shellfishing certification status, decisions regarding listing will reflect the shellfishing certification status. Because the specific extent and conditions of the closures are reported more precisely/frequently through the shellfishing programs than through the Section 303(d) List, these programs provide better delineated and more timely information regarding shellfishing certification in the waters of New York than does the Section 303(d) List. For the most current shellfishing certification information, refer to <http://www.dec.state.ny.us/website/dfwmr/marine/shellfish/sfntsh/index.htm>.

⁴⁹ Due to analytic limitations, the treatment of non-detect results in the data evaluation, and other data evaluation and quality assurance/quality control issues, additional monitoring and verification of PAHs and some Organochlorine Pesticides loadings in the river are necessary to develop a TMDL.

Other (Selected) Statewide Waters

Waters with pH between 6.0 and 6.5 or between 8.5 and 9.0.

Although New York State water quality standards state that pH shall not be less than 6.5 nor more than 8.5, there is considerable evidence that a wider range of pH is supportive of aquatic life and other uses. The NYSDEC Assessment Methodology reflects this fact by indicating that for waters with pH between 6.0 and 6.5 or between 8.5 and 9.0, waters are considered to be “stressed” but supporting of uses (i.e., not “impaired”) unless there are other indications of biological impact. As the triennial water quality standards rule-making effort moves forward, NYSDEC will evaluate the current pH standards for freshwater in light of available research and adopt a criterion that better reflects the natural range of pH in freshwaters and the resulting impact on use support. Pending the development of revised standards/criteria for pH, waters between 6.0 and 6.5 and 8.5 and 9.0 may be assessed as waters with Insufficient Data to make a determination regarding listing (Integrated Reporting Category 3).

⁵⁰ The specifically identified impaired water(s) in this segment is Little Fresh Pond (P662).

⁵¹ Includes former Halls Pond (1701-0027) segment, which was previously listed separately. The specifically identified impaired water in this segment is Halls Pond (P1008); however impairment of the larger waterbody needs to be verified.

⁵² This listing is a result of impairments due to extensive algal blooms (Cladophora) that are thought to be the result of multiple factors, including elevated phosphorus levels. Further study is necessary to determine the relative contribution of these multiple factors, the role of phosphorus loading to the Lake, whether a TMDL is the most appropriate management response, and if so, what is the appropriate TMDL target/endpoint. Until issues regarding the causes and pollutants and degree of impact, as well as an appropriate water quality standard are clarified, a Part 3b listing for the most significantly affected shoreline waters is considered to be the most appropriate way to recognize these water quality issues on the Section 303(d) List. Other additional Lake Ontario shoreline, embayment and tributary waterbodies were also considered for listing due to elevated phosphorus levels. NYSDEC believes decisions regarding these additional listings are more appropriately deferred pending the outcome of the NYSDEC effort, currently underway, to develop more appropriate numerical nutrient water quality criteria to replace the existing narrative standards and criteria for ponded waters. However USEPA requested that four specific waterbodies be added to the Section 303(d) List; these waterbodies are: Irondequoit Bay (0302-0001), Sodus Bay (0302-0020), East Bay (0302-0011) and North Pond (0303-0002). As noted above, TMDL development for Part 3b waterbodies may be deferred pending verification of the cause/pollutant.

⁵³ The specifically identified impaired water(s) in this segment include Densmore Creek (-5).

⁵⁴ The specifically identified impaired water(s) in this segment include Patterson Creek (-36).

⁵⁵ This listing is the result frequent harmful algal blooms (HABs) that impair recreational use (and threaten water supply use) in the Lake. Listings for waterbodies impaired due to HABs are not listed with HABs as the cause/pollutant because HABs is not a pollutant that can be regulated with a TMDL. More typically, listings of waterbodies impaired by HABs identify nutrients as the cause/pollutant however in this case the levels of phosphorus and chlorophyll-*a* in the open lake waters are low and indicate that something other than nutrient eutrophication is driving the occurrence of HABs. Therefore until there is a better understanding of the cause(s) of HABs in this situation, the most appropriate place to list this waterbody is Part 3b with the cause/pollutant noted as *Unknown*.

(MW8.5a) JB-241	Valley Stream, Upper, and tribs (1701-0225) ⁵⁹	Nassau	River	C	Unknown (biol impacts)	Urban/Storm Runoff	2010

⁶⁰ Because of the hydrology and bathymetry, nitrogen levels may not be causing macroalgae growth – or a water quality standards exceedence – in Reynolds Channel. However nitrogen discharges to the Channel support macroalgae growth in adjacent waters, significant amounts of which are pushed into the Channel by tides and prevailing winds and currents. Additionally the impact of the transported macroalgae into the Channel and deposits along the shore result in the impairment of uses. A nitrogen TMDL specifically for Reynolds Channel is not planned, however nitrogen levels in the Channel will be addressed through the Western Bays Nitrogen TMDL and other efforts to restore water quality and coastal habitat in Hempstead Bay and other adjacent waters.

⁶¹ Suspected impairments to this reach of Black Creek are expected to be addressed through the implementation of the Upper Black Creek TMDL/Watershed Plan effort.

⁶² Impairments to Cayuta Lake are largely the result of internal nutrient loading in the lake that cannot be resolved by a TMDL approach.

⁶³ The impairments to these waters are being addressed through a combination of measures 1) supported through the Onondaga Lake Partnership, 2) required by the Onondaga Amended Consent Judgment (ACJ) and/or 3) contained in Consent Orders and other agreements with municipalities and private entities to address industrial contamination, storm water, combined sewer overflows, and other urban sources. Monitoring through the Onondaga County Ambient Monitoring Program required by the ACJ, ongoing bacteria track down efforts and environmental sampling performed by others will be used to evaluate the results of these restoration measures, the water quality in these tributaries and the need for TMDL development.

⁶⁴ Impairments to Skaneateles Creek had been verified, but the impairment is thought to have been addressed through completed environmental (hazardous waste) remediation actions.

H-171 (portion 2)	Esopus Creek, Middle, Main Stem (1307-0003) ⁶⁸	Ulster	River	B(T)	Turbidity	Stream Erosion	2012

⁶⁵ Impairments to Kelsey Creek have been verified, but the impairment is being addressed through on-going environmental (hazardous waste) remediation actions.

⁶⁶ Impairments to these waters are being addressed by a Record of Decision and the resulting remediation of the River.

⁶⁷ Impairments to Orange Lake are being addressed through a series of locally-led lake management activities.

⁶⁸ These waters were appended to Section 303(d) List by USEPA in 2012. At that time NYSDEC had concluded that elevated turbidity in these waterbodies were the result of the aftermath of severe storm and flooding events. NYSDEC had not included these waterbodies on its Proposed Final 2012 Section 303(d) List submitted by NYSDEC to USEPA based on its determination that deviations from the narrative water quality standard for turbidity (“no increase that will cause a substantial visible contrast to natural conditions”) would have occurred under such conditions in the absence of any human-induced discharges or alterations to the waterbodies. Additionally, while extreme storm events are by nature infrequent, NYSDEC believes it is reasonable to consider such events and the resulting effects to be primarily natural events which may not, in fact, exceed the narrative standard nor meet the criteria for inclusion on the Section 303(d) List. NYSDEC also notes that water quality conditions in the stream have returned to what they were prior to the storm and flood events. While evaluating the necessity and appropriateness of developing a TMDL for these waterbodies, NYSDEC will fully explore other allowable regulatory mechanisms and TMDL alternatives, such as environmental reviews to evaluate any potential significant impacts and optimize future operations among sometimes competing uses and interests, in order to address these issues.

⁶⁹ These waterbody/pollutant listings were approved for delisting in 2012 by EPA as IR Category 4b waters where required control measures other than a TMDL are expected to result in attainment of water quality standards within a reasonable period of time. The required controls are outlined in detail in the 2005 NYC CSO Consent Order (subsequently modified in 2012). EPA determined that the Order is consistent with the National CSO Control Policy and that pursuant to this policy the Long Term Control Plans (LTCPs), when implemented, are expected to result in the attainment of water quality standards. However, rather than delist at this time, NYSDEC has opted to retain these waters on the List on Part 3c as waterbodies for which TMDLs are deferred pending the submittal and approval of the waterbody-specific Long Term Control Plans (LTCPs) to address these pollutants. Upon NYSDEC approval of LTCPs that meet the requirements of the Order, the waterbodies covered by the LTCP will be delisted and assigned to IR Category 4b.

⁷⁰ Shellfishing restrictions are based on shoreline survey assessments and documentation of potential sources (discharger outfalls, boat traffic) rather than actual sampling data. The development of a TMDL to reduce pathogen loads may not result in restoration (certification for shellfishing use) while the potential sources remain.

⁷¹ Impairments to Mattituck/Marratooka Pond are largely the result of wildlife (waterfowl) sources that cannot be resolved by a TMDL approach.

Appendix B - Listed Waterbodies Not Meeting Dissolved Oxygen Standards, Pending Verification of Use Impairments/Pollutants/Sources

It is widely accepted that morphology and other natural conditions may contribute to periodic dissolved oxygen depletion at lower depths in significant numbers of thermally stratified waters. However bottom water conditions are not necessarily representative of the waterbody as a whole and aquatic life and other uses are often fully supported in these waters. Although NYS water quality standards may not be met at times in these waters, the USEPA policy of independent applicability allows for resolving differences in assessment results by weighing the higher quality or more representative data set more favorably in the attainment decision.

NYSDEC acknowledges that available monitoring data shows water quality standards for dissolved oxygen in many waterbodies, including 39 specific waterbodies identified by USEPA, are not met at all times/seasons or depths. However NYSDEC has not verified that specific uses of these waters are actually impaired or determined that the violation of the water quality standard is a result of factors other than natural conditions (e.g., natural lake stratification versus excess nutrient loading from human activity). While it is not practical to include a listing of all the waters that correspond to the USEPA interpretation and application of the dissolved oxygen standard for listing making decisions, 39 waterbodies specifically identified by USEPA are listed below.¹⁴¹

NYSDEC is conducting an evaluation of whether these 39 waters are impaired in any significant manner by pollutant loadings that are from other than natural conditions. Upon verification of impairment to these waters from other than natural sources or conditions, NYSDEC will undertake the preparation of a TMDL to address the impairment, unless a TMDL or other restoration strategy plan to address the impairment is already in place or a TMDL is not needed because a single entity is the source of a significant majority of the pollutant loading that is causing the impairment - obviating the need for a load allocation among various sources.

NYSDEC is also currently evaluating its dissolved oxygen standards language in order to more appropriately reflect the impact of natural conditions and occurrence of periodic low dissolved oxygen in waters of the state. In the meantime, NYSDEC will review dissolved oxygen data in conjunction with other available data (particularly biological assessments that are more directly reflective of aquatic life use) to determine the actual level of impacts and specific causes in order to reach the most appropriate water quality assessment decisions. This approach is discussed in more detail in the *Assessment of Naturally Occurring Low Dissolved Oxygen Waters* section of the *Assessment Methodology*.

¹⁴¹ Specific waterbodies with low dissolved oxygen from undetermined causes (natural or other) that USEPA requested be added to the Section 303(d) List: Clear Lake (0104-0057), Crystal Lake (0104-0070), Hyde Lake (0303-0043), Lamoka Lake and Mill Pond (0502-0001), Waneta Lake (0502-0002), Lower/Upper Little York Lakes (0602-0017), Tully Lake (0602-0018), Norwich Reservoirs (0602-0010), Lake Moraine (0602-0007), Lebanon Reservoir (0602-0109), Eaton Brook Reservoir (0602-0041), Afton Lake (0601-0010), Chenango Lake (0601-0013), Weaver Lake (Maumee Swamp) (0601-0025), Otisco Lake (0702-0011), Onondaga Lake, Northern End (0702-0003), Onondaga Lake, Southern End (0702-0021), Upper Saranac Lake (1003-0048), Taylor Pond (and Mud Pond) (1004-0063), Lower Cascade/Upper Cascade/Mud Lakes (1004-0075), Putnam/North Pond (1005-0018), Lake Lauderdale, Schoolhouse Lake (1102-0011), Lake Gilead (1302-0024), Lake Gleneida (1302-0025), Lake Tonetta (1302-0014), Barger Pond (1301-0091), Copake Lake (1310-0014), Watervliet Reservoir (1311-0001), Burden Lake (1301-0025), White/Amber Lakes (1401-0018), Big Mohican Lake (1401-0007), Lake Huntington (1401-0008), Silver Lake Reservoir (1701-0359), Whitney Lake (1702-0101), Wainscott Pond/Fairfield Pond (1701-0144), Old Town Pond (1701-0118), West and East Mill Ponds (1701-0026), Massapequa Lake (1701-0156), Milburn Pond (1701-0053).
