

ZEVAC[®]

Zero Emission Vacuum and Compressor

The Right Tools Can Change Operating Cultures

Presentation to:

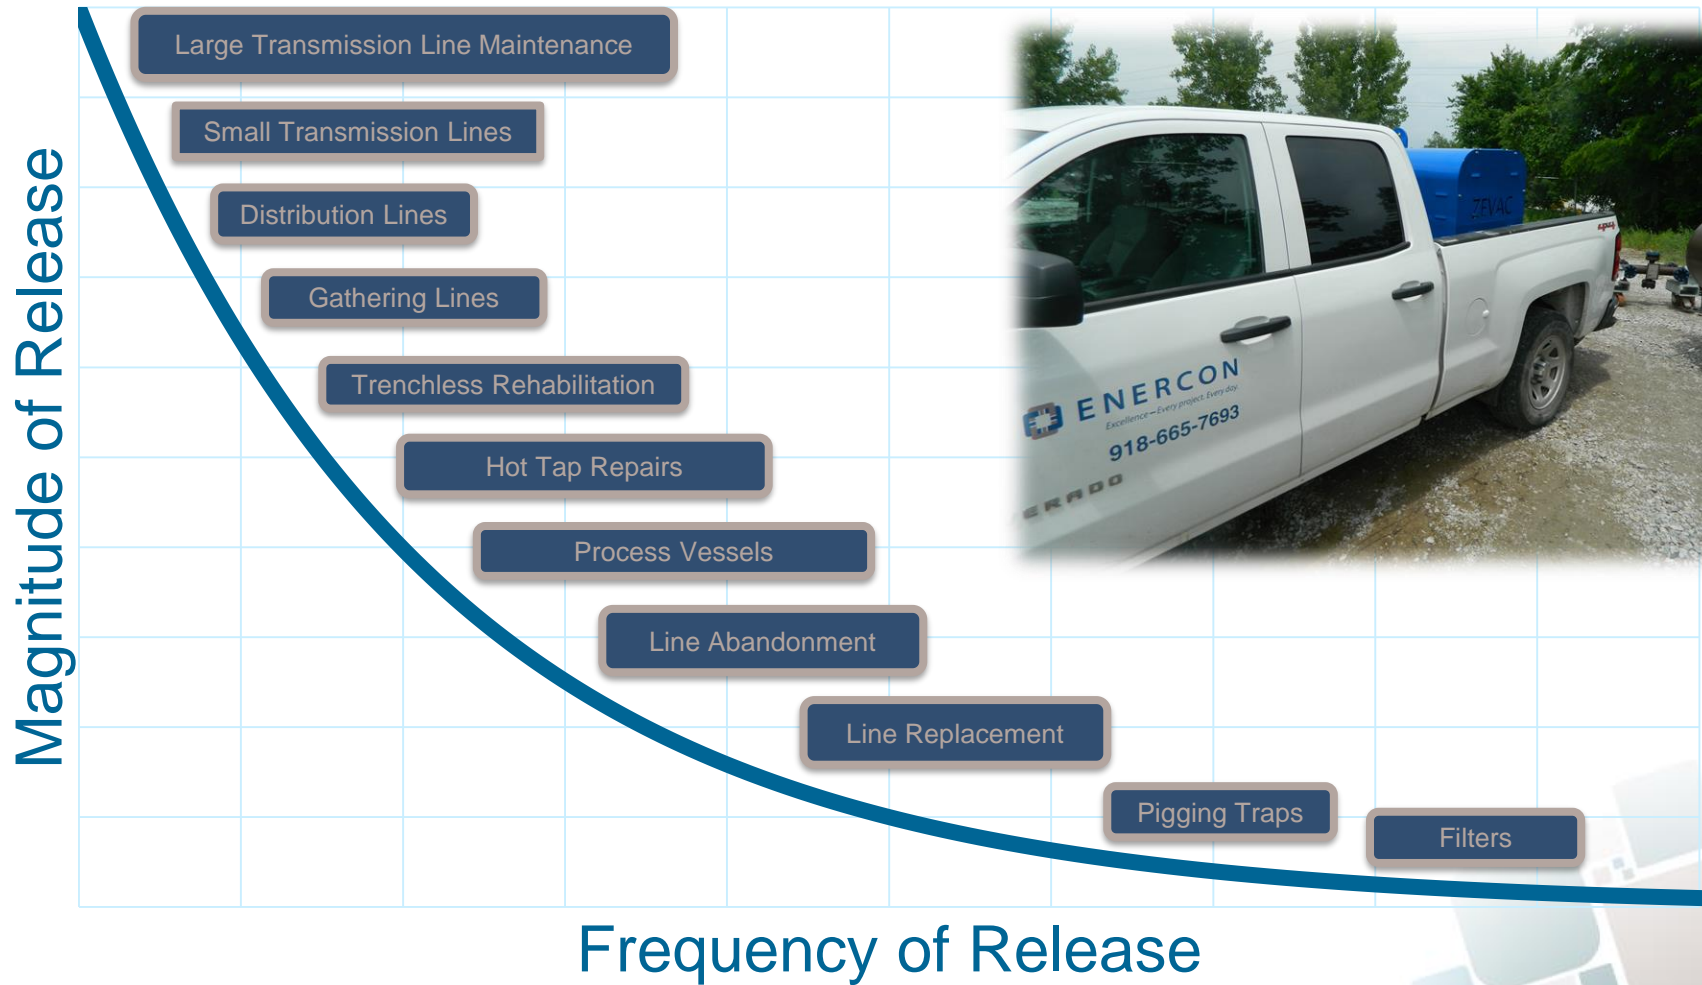

**Natural Gas Star
and Methane Challenge Program**

ZEVAC[®] - *Changing Operating Culture* *Aligning Industry Approach*

- Liquids and Natural Gas
 - Safety and Environmental Culture
 - Containment versus Venting and Flaring as SOP
- Regulatory and Societal Drivers
- ZEVAC[®] is a Unique and Effective Solution
 - Sized for production at various pressures
 - Mobile or permanent installations
 - Much smaller footprint than draw-down compressors

ZEVAC[®] - Changing Operating Culture

Processes That Vent or Flare

ZEVAC[®] - Changing Operating Culture

Emission Free Alternative to Venting and Flaring

Reduces Safety Risks Through Engineered Means

- Prevents flammable / explosive fuel-air cloud formation
- Removes the need to ignite open flame for flaring
- Mitigates many operator safety hazards
- Minimizes notification and coordination requirements

Meets the Methane Challenge of Mitigating Emissions

- Capable of ZERO Emission Performance
- Ability to calculate avoided emissions of both CO₂ and CH₄
- Transmission, Midstream, and Distribution Applications
- Demonstrates environmental stewardship to the community
