RE: Maine Pollutant Discharge Elimination System (MEPDES) Permit # ME0110221
Maine Waste Discharge License (WDL) Application # W000990-5P-E-R
Proposed Draft MEPDES Permit Renewal

Dear April Bayley:

Enclosed is a proposed draft MEPDES permit and Maine WDL which the Department proposes to issue for your facility as a final document after opportunity for your review and comment. By transmittal of this letter, you are provided with an opportunity to comment on the proposed draft permit and its conditions (special conditions specific to this permit are enclosed; standard conditions applicable to all permits are available upon request). If it contains errors or does not accurately reflect present or proposed conditions, please respond to this Department so that changes can be considered.

By copy of this letter, the Department is requesting comments on the proposed draft permit from various state and federal agencies, as required by our new regulations, and from any other parties who have notified the Department of their interest in this matter. If you have any questions regarding the matter, please feel free to call me.

All comments must be received in the Department of Environmental Protection office on or before the close of business Monday, August 13, 2018. Failure to submit comments in a timely fashion will result in the final document being issued as drafted.
Comments in writing should be submitted to my attention at the following address:

Maine Department of Environmental Protection
Bureau of Water Quality
Division of Water Quality Management
17 State House Station
Augusta, ME 04333-0017
Aaron.A.Dumont@maine.gov

If you have any questions regarding the matter, please feel free to call me at (207)-592-7161.

Sincerely,

Aaron Dumont
Division of Water Quality Management
Bureau of Water Quality
Aaron.A.Dumont@maine.gov
Phone: 207-592-7161

DEPARTMENT ORDER

IN THE MATTER OF

BAYLEY’S QUALITY SEAFOOD ) MAINE POLLUTANT DISCHARGE
SCARBOROUGH, CUMBERLAND CO., MAINE ) ELIMINATION SYSTEM PERMIT
SHELLFISH PROCESSING FACILITY ) AND
ME0110221 ) WASTE DISCHARGE LICENSE
W000990-5P-E-R APPROVAL ) RENEWAL

In compliance with the applicable provisions of Pollution Control, 38 M.R.S. §§ 411 – 424-B, Water Classification Program, 38 M.R.S. §§ 464 – 470 and Federal Water Pollution Control Act, Title 33 U.S.C. § 1251, and applicable rules of the Department of Environmental Protection (Department), the Department has considered the application of BAYLEY’S QUALITY SEAFOOD (BQS), with its supportive data, agency review comments, and other related materials on file and FINDS THE FOLLOWING FACTS:

APPLICATION SUMMARY

On October 2, 2017, the Department accepted as complete for processing, a renewal application from BQS for the renewal of Waste Discharge License (WDL) W000990-5P-D-R/Maine Pollutant Discharge Elimination System (MEPDES) permit ME0110221, which was issued on December 5, 2012, for a five-year term. The 12/5/12 MEPDES permit authorized BQS to discharge up to 63,525 gallons per day (gpd) of treated seafood processing wastewater to tidewaters of Scarborough (Jones Creek), Class SB in Scarborough, Maine.

Shrimp are processed by removing unmarketable portions (decapitated, peeled, and washed) and packaged on ice for distribution. Clams are processed by, heat shocking to remove byssal threads, shucking shells and washing before being packaged on ice for distribution. Sanitary wastewater is disposed of in an on-site subsurface wastewater disposal system. The permittee is also seeking continued authorization to discharge the clam processing wastewater to their on-site subsurface wastewater disposal system as an alternative to discharging to Jones Creek.

PERMIT SUMMARY

This permitting action is carrying forward all the terms and conditions of the previous permitting action.
CONCLUSIONS

Based on the findings summarized in the attached and incorporated Fact Sheet dated July 12, 2018, and subject to the special and standard conditions that follow, the Department makes the following CONCLUSIONS:

1. The discharge, either by itself or in combination with other discharges, will not lower the quality of any classified body of water below such classification.

2. The discharge, either by itself or in combination with other discharges, will not lower the quality of any unclassified body of water below the classification which the Department expects to adopt in accordance with state law.

3. The provisions of the State’s antidegradation policy, Classification of Maine waters, 38 M.R.S. § 464(4)(F), will be met, in that:
   a. Existing in-stream water uses and the level of water quality necessary to protect and maintain those existing uses will be maintained and protected;
   b. Where high quality waters of the State constitute an outstanding natural resource, that water quality will be maintained and protected;
   c. Where the standards of classification of the receiving waterbody are not met, the discharge will not cause or contribute to the failure of the waterbody to meet the standards of classification;
   d. Where the actual quality of any classified receiving waterbody exceeds the minimum standards of the next highest classification that higher water quality will be maintained and protected; and
   e. Where a discharge will result in lowering the existing water quality of any waterbody, the Department has made the finding, following opportunity for public participation, that this action is necessary to achieve important economic or social benefits to the State.

4. The discharges will be subject to effluent limitations that require application of best practicable treatment as defined in Conditions of licenses, 38 M.R.S. § 414-A(1)(D).
ACTION

THEREFORE, the Department APPROVES the above noted application of BAYLEY'S QUALITY SEAFOOD, to discharge a daily maximum of 63,525 gallons per day of treated seafood processing wastewater and facility clean up water to the tidewaters of (Jones Creek), Class SB or the ground water, Class GW-A in Scarborough, Maine, SUBJECT TO THE FOLLOWING CONDITIONS, and all applicable standards and regulations including:

2. The attached Special Conditions, including any effluent limitations and monitoring requirements.

3. This permit and the authorization to discharge become effective upon the date of signature below and expire at midnight five (5) years from the effective date. If a renewal application is timely submitted and accepted as complete for processing prior to the expiration of this permit, the authorization to discharge and the terms and conditions of this permit and all modifications and minor revisions thereto remain in effect until a final Department decision on the renewal application becomes effective. [*Maine Administrative Procedure Act, 5 M.R.S. § 10002 and Rules Concerning the Processing of Applications and Other Administrative Matters, 06-096 CMR 2(21)(A) (amended October 19, 2015)*]

PLEASE NOTE ATTACHED SHEET FOR GUIDANCE ON APPEAL PROCEDURES

DONE AND DATED AT AUGUSTA, MAINE, THIS ___ DAY OF __________________ 2018.

DEPARTMENT OF ENVIRONMENTAL PROTECTION

BY: __________________________________________

PAUL MERCER, Commissioner

Date filed with Board of Environmental Protection____________________________________

Date of initial receipt of application:  October 2, 2017
Date of application acceptance:  October 2, 2017

This Order prepared by Aaron Dumont, BUREAU OF WATER QUALITY
SPECIAL CONDITIONS

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

1. Beginning the effective date of this permit, the permittee is authorized to discharge treated SHRIMP processing and facility clean-up wastewater to the tidewaters of (Jones Creek) via OUTFALL #001 only during December through April of any year. Such discharges must be limited and monitored by the permittee as specified below(1).

### December through April

SPECIAL CONDITIONS

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

FOOTNOTES

1. **Sampling** – Any change in sampling location must be approved by the Department in writing. The permittee must conduct sampling and analysis in accordance with; a) methods approved by 40 Code of Federal Regulations (CFR) Part 136, b) alternative methods approved by the Department in accordance with the procedures in 40 CFR Part 136, or c) as otherwise specified by the Department. Samples that are sent out for analysis must be analyzed by a laboratory certified by the State of Maine’s Department of Health and Human Services for wastewater. Samples that are sent to a POTW licensed pursuant to *Waste discharge licenses*, 38 M.R.S. § 413 are subject to the provisions and restrictions of *Maine Comprehensive and Limited Environmental Laboratory Certification Rules*, 10-144 CMR 263 (effective April 1, 2010). If the permittee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring must be included in the calculation and reporting of the data submitted in the DMR.

2. **Flow** – Monthly average flow must be calculated as follows: The total gallons discharged during the calendar month divided by the number of days in the month that the facility was operating.

3. **Grab samples** – Must consist of a composite sample of four flow proportioned grab samples collected over the operating day or a sample collected by an automatic flow proportioning compositor over the day.

4. **Total residual chlorine (TRC)** – Limitations and monitoring requirements are applicable whenever elemental chlorine or chlorine based compounds are being used and discharged. For instances when a facility has not disinfected with chlorine based compounds for an entire reporting period, the facility must report “NODI-9” for this parameter on the monthly DMR. The permittee must utilize approved test methods that are capable of bracketing the limitations in this permit.

5. **Production** – Gross weight of pounds of raw material in the form in which it is received at the processing plant to be processed on any given day.

6. **2/Month sampling** – There must be at least 10 days between sampling events.
SPECIAL CONDITIONS

B. NARRATIVE EFFLUENT LIMITATIONS

1. The permittee must not discharge effluent that contains a visible oil sheen, foam or floating solids at any time which would impair the uses designated by the classification of the receiving waters.

2. The permittee must not discharge effluent that contains materials in concentrations or combinations which are hazardous or toxic to aquatic life, or which would impair the uses designated by the classification of the receiving waters.

3. The permittee must not discharge effluent that imparts color, taste, turbidity, toxicity, radioactivity or other properties which cause those waters to be unsafe for the designated uses and characteristics ascribed to their classification.

4. The permittee must not discharge effluent that lowers the quality of any classified body of water below such classification, or lower the existing quality of any body of water if the existing quality is higher than the classification.

C. AUTHORIZED DISCHARGES

The permittee is authorized to discharge only in accordance with: 1) the permittee’s General Application for Waste Discharge Permit, accepted for processing on October 2, 2017; 2) the terms and conditions of this permit; and 3) only from Outfalls #001, #002A, and #002B. Discharges of wastewater from any other point source(s) are not authorized under this permit, and must be reported in accordance with Standard Condition D(1)(f), Twenty-four hour reporting, of this permit.

D. NOTIFICATION REQUIREMENT

In accordance with Standard Condition D, the permittee must notify the Department of the following:

1. Any introduction of pollutants into the wastewater collection and treatment system from an indirect discharger in a primary industrial category discharging process wastewater; and

2. Any substantial change in the volume or character of pollutants being introduced into the wastewater collection and treatment system by a source introducing pollutants to the system at the time of permit issuance.

3. For the purposes of this section, notice regarding substantial change must include information on:
   a. the quality and quantity of wastewater introduced to the wastewater collection and treatment system; and
   b. any anticipated impact caused by the change in the quantity or quality of the wastewater to be discharged from the treatment system.

This space intentionally left blank
E. OPERATIONS AND MAINTENANCE (O&M) PLAN AND SITE PLAN(S)

The permittee must maintain a current written comprehensive Operation & Maintenance (O&M) Plan for the facility. The plan must provide a systematic approach by which the licensee must at all times, properly operate and maintain all facilities and the systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this license.

By December 31 of each year, or within 90 days of any process changes or minor equipment upgrades, the licensee must evaluate and modify the O&M Plan including site plan(s) and schematic(s) for the wastewater treatment facility to ensure that it is up-to-date. The O&M Plan must be kept on-site at all times and made available to the Department personnel upon request.

Within 90 days of completion of new and substantial upgrades of the wastewater treatment facility, the licensee must submit the updated O&M Plan to their Department inspector for review and comment.

F. MONITORING AND REPORTING

Electronic Reporting

NPDES Electronic Reporting, 40 C.F.R. 127, requires MEPDES permit holders to submit monitoring results obtained during the previous month on an electronic discharge monitoring report to the regulatory agency utilizing the USEPA electronic system.

Electronic Discharge Monitoring Reports (DMRs) submitted using the USEPA NetDMR system, must be:

1. Submitted by a facility authorized signatory; and
2. Submitted no later than midnight on the 15th day of the month following the completed reporting period.

Documentation submitted in support of the electronic DMR may be attached to the electronic DMR. Toxics reporting must be done using the DEP toxsheet reporting form. An electronic copy of the Toxsheet reporting document must be submitted to your Department compliance inspector as an attachment to an email. In addition, a hardcopy form of this sheet must be signed and submitted to your compliance inspector, or a copy attached to your NetDMR submittal will suffice.
F. MONITORING AND REPORTING (cont’d)

Documentation submitted electronically to the Department in support of the electronic DMR must be submitted no later than midnight on the 15th day of the month following the completed reporting period.

Non-electronic Reporting
If you have received a waiver from the Department concerning the USEPA electronic reporting rule, or are permitted to submit hardcopy DMR’s to the Department, then your monitoring results obtained during the previous month must be summarized for each month and reported on separate Discharge Monitoring Report (DMR) forms provided by the Department and postmarked on or before the thirteenth (13th) day of the month or hand-delivered to a Department Regional Office such that the DMR’s are received by the Department on or before the fifteenth (15th) day of the month following the completed reporting period.

Toxsheet reporting forms must be submitted electronically as an attachment to an email sent to your Department compliance inspector. In addition, a signed hardcopy of your toxsheet must also be submitted.

A signed copy of the DMR and all other reports required herein must be submitted to the Department assigned compliance inspector (unless otherwise specified) following address:

Department of Environmental Protection
Bureau of Water Quality
Division of Water Quality Management
Southern Maine Regional Office
312 Canco Road
Portland, Maine 04401

G. REOPENING OF PERMIT FOR MODIFICATION

In accordance with 38 M.R.S. § 414-A(5) and upon evaluation of the tests results or monitoring requirements specified in Special Conditions of this permitting action, new site specific information, or any other pertinent test results or information obtained during the term of this permit, the Department may, at any time and with notice to the permittee, modify this permit to: 1) include effluent limits necessary to control specific pollutants or whole effluent toxicity where there is a reasonable potential that the effluent may cause water quality criteria to be exceeded, (2) require additional monitoring if results on file are inconclusive; or (3) change monitoring requirements or limitations based on new information.

H. SEVERABILITY

In the event that any provision(s), or part thereof, of this permit is declared to be unlawful by a reviewing court, the remainder of the permit must remain in full force and effect, and must be construed and enforced in all aspects as if such unlawful provision, or part thereof, had been omitted, unless otherwise ordered by the court.

1. APPLICATION SUMMARY

On October 2, 2017, the Department of Environmental Protection (Department) accepted as complete for processing, a renewal application from Bayley’s Quality Seafood (BQS) for the renewal of Waste Discharge License (WDL) W000990-5P-D-R/Maine Pollutant Discharge Elimination System (MEPDES) permit ME0110221, which was issued on December 5, 2012, for a five-year term. The 12/5/12 MEPDES permit authorized BQS to discharge up to 63,525 gallons per day (gpd) of treated seafood processing wastewater to tidewaters of Scarborough (Jones Creek), Class SB in Scarborough, Maine.

Shrimp are processed by removing unmarketable portions (decapitated, peeled, and washed) and packaged on ice for distribution. Clams are processed by heat shocking to remove byssal threads, shucking shells and washing before being packaged on ice for distribution. Sanitary wastewater is disposed of in an on-site subsurface wastewater disposal system. The permittee is also seeking continued authorization to discharge the clam processing wastewater to their on-site subsurface wastewater disposal system as an alternative to discharging to Jones Creek.
2. PERMIT SUMMARY

a. This permitting action is carrying forward all the terms and conditions of the previous permitting action except.

b. **History:** This section provides a summary of significant licensing actions and milestones that have been completed for Bayley’s Quality Seafood.

   *October 27, 1976* – The Department issued Waste Discharge License (WDL) #W000990 authorizing the discharge of up to 5,000 gallons per day of treated seafood processing wastewater.

   *January 11, 1978* – The Department modified the 10/27/76 WDL by increasing the flow limitation to 14,000 gallons per day.

   *January 11, 1991* – The Department issued a draft denial Order (#W000990-WA-A-R) for the seafood processing wastewater. In the draft denial order, the Department found that the seafood processing wastewater from BQS contained high concentrations of Biological Oxygen Demand (BOD), suspended and floating solids, turbidity and, oil and grease. The Department also found that the discharge in combination with the limited dilution available would cause the receiving waters to be unsuitable for the designated uses assigned to the receiving waters. Further, the Department Order found that the Scarborough Sanitary District (SSD) provided sewerage collection and treatment services for the local area and that consignment of the wastewater to the SSD is the best practicable treatment for the wastewater. The draft denial order was never issued as a final document.

   *January 25, 1991* – The Town of Scarborough wrote to the Department concurring with the findings and decision of the draft order that continuation of the discharge may (1) lower the water quality of Jones Creek below the assigned classification, (2) eliminate the possibility of opening the adjacent shellfish harvesting area, and (3) be discontinued because of the availability of municipal sewer connection near the property boundary with BQS.

   *February 7, 2001* – The Department issued a Notice of Violation requiring the submittal of an application for renewal of the WDL or discontinuation of the discharge.

   *April 5, 2001* – BQS submitted an application to the Department for renewal of the WDL.

   *April 25, 2001* – The Department accepted the WDL application as submitted by BQS for processing.

   *January 12, 2001* – The Department received authorization from the United States Environmental Protection Agency (USEPA) to administer the National Pollutant Discharge Elimination System (NPDES) permitting program in Maine. From that point forward, the program has been referred to as the MEPDES permit program and MEPDES permit numbers will be utilized as the primary facility reference. It is noted BQS never obtained a NPDES permit from USEPA for the discharges at the facility.

   *August 13, 2002* – The Department issued combination MEPDES permit #ME0110221/WDL #W000990-5P-A-R for a five-year term.

   *March 6, 2007* – The Department issued combination MEPDES permit #ME0110221/WDL #W000990-5P-B-R for a five-year term.
2. PERMIT SUMMARY (cont'd)

April 18, 2008 – The Department issued minor revision #ME0110221/WDL #W000990-5P-C-M correcting an aforementioned typographical error by deleting the June – September restriction for the disposal of clam processing waters to surface waters or to a sub-surface wastewater disposal system.

October 16, 2012 – The permittee submitted a complete application to the Department to renew the March 6, 2007, MEPDES permit.

October 2, 2017 – The Permittee submitted a complete application to the Department for the renewal of combination MEPDES permit #ME0110221/WDL #W000990-5P-D-R issued on 12/4/2012.

c. Source Description: The facility processes shrimp and clams from bulk suppliers and packages the processed shrimp in 4 pound packages for distribution and live clams in 5 pound packages for consumption at the retail level. Wastewater is generated from the cleaning, deheading, carapace and leg removal, and washing the shrimp carcass. The permittee has indicated that cooking of shrimp does take place occasionally but is not a normal business practice. Clams are processed by, heat shocking to remove byssal threads, shucking shells and washing before packaged on ice for distribution. All water utilized to process the seafood and used for clean-up is purchased from the The Maine Water Company.

d. Wastewater Treatment: Wastewater receives treatment by means of a 30-micron screen located in a pit adjacent to the processing area. The wastewater is directed to the screen and solids that have a diameter greater than the screen mesh holes will fall out of the wastewater stream. Solids are augured to a holding bin for disposal at a landfill operation. Wastewater that passes through the screen and is conveyed to Jones Creek via a 6-inch outfall pipe extending out into the middle of Jones Creek (just below the outfall of a large culvert under Pine Point Road) whereby there is approximately six (6) feet of water over the crown of the outfall pipe at mean low water, approximately nine (9) feet of water over the crown of the pipe at mean tide and approximately 14 feet of water over the crown of the pipe at mean high tide. The pipe contains a single outfall orifice that is strategically located to maximize mixing of the discharge with the receiving waters.

3. CONDITIONS OF PERMIT

Maine law, 38 M.R.S. Section 414-A, requires that the effluent limitations prescribed for discharges, including, but not limited to, effluent toxicity, require application of best practicable treatment (BPT), be consistent with the U.S. Clean Water Act, and ensure that the receiving waters attain the State water quality standards as described in Maine's Surface Water Classification System. In addition, 38 M.R.S., Section 420 and Department rule 06-096 CMR Chapter 530, Surface Water Toxics Control Program, require the regulation of toxic substances not to exceed levels set forth in Department rule 06-096 CMR Chapter 584, Surface Water Quality Criteria for Toxic Pollutants, and that ensure safe levels for the discharge of toxic pollutants such that existing and designated uses of surface waters are maintained and protected.
4. RECEIVING WATER QUALITY STANDARDS

*Classification of Ground Waters*, 38 M.R.S. § 470 classifies the groundwater at the point of discharge as Class GW-A. *Standards of Classification of Ground Water*, 38 M.R.S., Section 465-C(1), describes the standards for waters classified as Class GW-A as the highest classification of groundwater and must be of such quality that it can be used for public water supplies. These waters must be free of radioactive matter or any matter that imparts color, turbidity, or odor which would impair use of these waters, other than that occurring from natural phenomena.

*Classification of estuarine and marine waters*, 38 M.R.S. § 468 classifies the marine waters of Jones Creek located in Scarborough, Maine at the point of discharge, as a Class SB water. *Standards for classification of fresh surface waters*, 38 M.R.S. § 465-B describes the standards for Class SB waters.

5. RECEIVING WATER QUALITY CONDITIONS

*The State of Maine 2014 Integrated Water Quality Monitoring and Assessment Report*, prepared by the Department pursuant to Sections 303(d) and 305(b) of the Federal Water Pollution Control Act, lists marine waters at the permittee’s outfall (Waterbody ID 811) as “Category 5-B-1(a): Estuarine and Marine Water Impaired for Bacteria Only – TMDL Required.”

The Maine Department of Marine Resources (MEDMR) closes shellfish harvesting areas if there are known sources of discharges with unacceptable bacteria levels (thresholds established in the National Shellfish Sanitation Program) or maintains shellfish harvesting closure areas due to lack of updated information regarding ambient water quality conditions and current shoreline surveys. In addition, the MEDMR prohibits shellfish harvesting in the immediate vicinity of all wastewater treatment outfall pipes as a precautionary measure in the event of a failure in the treatment plant’s disinfection system. Shellfish harvesting in area #11 is conditionally open to the harvesting. The shellfish closure area can be found at [http://www.maine.gov/dmr/shellfish-sanitation-management/closures/pollution.html](http://www.maine.gov/dmr/shellfish-sanitation-management/closures/pollution.html)

6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

By this permit renewal, the effluent limitations and monitoring requirements are being established to address the quantity and quality of the seafood processing wastewater. Effluent limitations for total suspended solids, oil & grease, and pH are based on the Code of Federal Regulations (CFR), National Effluent Guidelines (NEGs) found at Title 40, Sub-Part K, Northern Shrimp Processing in the Contiguous State Subcategory, §408.110. Subpart K is applicable to shrimp processing facilities that process 2,000 lbs. or more of raw material per day on any given day during a calendar year. For clam processing, applicable NEGs can be found at federal regulation 40 CFR, Sub-Part W, Hand Shucked Clam Processing Category, §408.23. Subpart W is applicable to clam processing facilities that process more than 2,000 lbs. or more of raw material per day on any given day during a calendar year. As discussed below, BQS only processes up to a daily maximum of 800 lbs./day.
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

However, in the absence of any State effluent guidelines, the Department is making a BPJ determination to give deference to the federal NEG and therefore, calculating technology based limits on said NEGs.

a. Production – The previous permitting action established technology based mass and concentration limits based on raw production material. The facility processes shrimp for a 20-week period time from December – April inclusively. Raw shrimp production is up to 12,000 lbs./day as a monthly average with a daily maximum of 20,000 lbs./day for a total production of 1,260,000 lbs./season. Therefore, for the purposes of this and the previous permitting action, a monthly average shrimp production figure of 12,000 lbs./day is being utilized to calculate technology based permit limits.

For raw clams production, ranges from up to 500 lbs./day as a monthly average with 800 lbs./day as a daily maximum for a total of 45,000 lbs./year. Therefore, for the purposes of this permitting action, a monthly average clam production figure of 500 lbs./day will be used to calculate technology based permit limits.

A review of the monthly average flow data as reported on the monthly Discharge Monitoring Reports (DMRs) submitted to the Department for the period December 2012 – December 2017 indicates values have been reported as follows:

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (lbs./day)</th>
<th>Range (lbs./day)</th>
<th>Mean (lbs./day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>Report</td>

</table>

b. Flow – The previous permitting action established monthly average and daily maximum flows as follows:

<table>
<thead>
<tr>
<th></th>
<th>Monthly Avg.</th>
<th>Daily Max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shrimp</td>
<td>42,359 gpd</td>
<td>63,525 gpd</td>
</tr>
<tr>
<td>Clams</td>
<td>7,140 gpd</td>
<td>10,710 gpd</td>
</tr>
</tbody>
</table>

This permitting action is carrying forward the respective monthly average and daily maximum flow limitations for both the shrimp and clam processes.
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

A review of the monthly average flow data as reported on the monthly DMRs submitted to the Department for the period December 2012 – December 2017 indicates values have been reported as follows:

<table>
<thead>
<tr>
<th>Flow – Shrimp (DMRs = 0)</th>
<th></th>
<th></th>

</tbody>
</table>

c. Dilution Factors: Department Regulation Chapter 530 *Surface Water Toxics Control Program*, §4(a)(2) states:

(1) For estuaries where tidal flow is dominant and marine discharges, dilution factors are calculated as follows. These methods may be supplemented with additional information such as current studies or dye studies.

(a) For discharges to the ocean, dilution must be calculated as near-field or initial dilution, or that dilution available as the effluent plume rises from the point of discharge to its trapping level, at mean low water level and slack tide for the acute exposure analysis, and at mean tide for the chronic exposure analysis using appropriate models determined by the Department such as MERGE, CORMIX or another predictive model.

(b) For discharges to estuaries, dilution must be calculated using a method such as MERGE, CORMIX or another predictive model determined by the Department to be appropriate for the site conditions.

(c) In the case of discharges to estuaries where tidal flow is dominant and marine waters, the human health criteria must be analyzed using a dilution equal to three times the chronic dilution factor.

**Shrimp Processing**

Using the updated (10/19/07) plan and profile information of the outfall and permitting information developed for other like discharges utilizing the CORMIX model, the Department has made a best professional judgment (BPJ) determination that the dilution factors for the discharge of 0.042 MGD are as follows:

Acute = 20:1  Chronic = 25:1  Harmonic mean = 75:1^(1)
6. **EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)**

**Clam Processing**

Given the monthly average flow cited in section 6(b) above are approximately 1/6th of the flows for shrimp processing for which the dilution factors in this Fact Sheet were derived, the Department is making a BPJ determination to establish the dilution factors for the clam processing as six times higher than the dilution factors for the shrimp processing discharge. As a result, the dilution factors for the discharge of clam processing wastewater to Jones Creek are as follows:

Acute = 120:1  Chronic = 150:1  Harmonic mean = 450:1 \(^{(1)}\)

(1) Pursuant to Department rule Chapter 530, “Surface Water Toxics Control Program”, §4(2)(c), the harmonic mean dilution factor is approximated by multiplying the chronic dilution factor by a factor of three (3).

d. **Settleable solids** – The previous permitting action established a daily maximum technology based concentration limit for settleable solids of 0.3 ml/L for both shrimp and clams that is being carried forward in this permitting action. The limit is based on BPJ of best practicable treatment (BPT) determination by the Department.

A review of the DMR data for the period December 2012 – December 2017 indicates values have been reported as follows:

**Settleable solids – Shrimp (DMRs = 9)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (ml/L)</th>
<th>Range (ml/L)</th>
<th>Mean (ml/L)</th>
</tr>
</thead>
<tbody>

<td>30.0</td>
</tr>
</tbody>
</table>
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

Shrimp Processing

According to 40 CFR 408.112, BPT for TSS is as follows:

Monthly average – 54 lbs./1,000 lbs. of production
Daily maximum – 160 lbs./1,000 lbs. of production

With a monthly average production figure of 12,000 lbs. for shrimp, technology based mass limits are calculated as follows:

Monthly average: \(12,000 \text{ lbs.} \times \frac{54 \text{ lbs.}}{1,000 \text{ lbs.}} = 648 \text{ lbs./day}\)

Daily maximum: \(12,000 \text{ lbs.} \times \frac{160 \text{ lbs.}}{1,000 \text{ lbs.}} = 1,920 \text{ lbs./day}\)

Department rule Chapter 523, Waste Discharge License Conditions, Section 6, Calculating NPDES permit conditions, sub-section f(2) states that “… pollutants limited in terms of mass additionally may be limited in terms of other units of measurement and the permit must require the permittee to comply with both limitations.” Due to the large fluctuations in daily production and to ensure BPT is being applied at all production levels, the Department is establishing monthly average and daily maximum concentration limits for TSS. The concentration limits were derived by a back-calculation using the respective monthly average and daily maximum mass and flow limitations. The calculations are as follows:

Monthly average: \(\frac{648 \text{ lbs./day}}{(8.34 \text{ lbs./gal.})(0.042350 \text{ MGD})} = 1,835 \text{ mg/L}\)

Daily maximum: \(\frac{1,920 \text{ lbs./day}}{(8.34 \text{ lbs./gal.})(0.063525 \text{ MGD})} = 3,624 \text{ mg/L}\)

A review of the DMR data for the period December 2012 – December 2017 indicates the following:

<table>
<thead>
<tr>
<th>TSS Mass (DMRs = 0)</th>
<th>Value</th>
<th>Limit (lbs./day)</th>
<th>Range (lbs./day)</th>
<th>Average (lbs./day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>648</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>1,920</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>TSS Concentration (DMRs = 0)</th>
<th>Value</th>
<th>Limit (mg/L)</th>
<th>Range (mg/L)</th>
<th>Average (mg/L)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>1,835</td>

<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>3,624</td>
<td>N/A</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>
6. **EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)**

**Clam Processing**

According to 40 CFR 408.232, BPT for TSS is as follows:

- Monthly average – 18 lbs./1,000 lbs. of production
- Daily maximum – 59 lbs./1,000 lbs. of production

With a monthly average production figure of 500 lbs. for clams, technology based mass limits are calculated as follows:

- Monthly average: \( \frac{500 \text{ lbs.} \times 18 \text{ lbs.}}{\text{day} \times 1,000 \text{ lbs.}} = 9.0 \text{ lbs./day} \)
- Daily maximum: \( \frac{500 \text{ lbs.} \times 59 \text{ lbs.}}{\text{day} \times 1,000 \text{ lbs.}} = 30 \text{ lbs./day} \)

Department rule Chapter 523, *Waste Discharge License Conditions*, Section 6, *Calculating NPDES permit conditions*, sub-section f(2) states that “… pollutants limited in terms of mass additionally may be limited in terms of other units of measurement and the permit must require the permittee to comply with both limitations.” Due to the large fluctuations in daily production and to ensure BPT is being applied at all production levels, the Department is establishing monthly average and daily maximum concentration limits for TSS. The concentration limits were derived by a back-calculation using the respective monthly average and daily maximum mass and flow limitations. The calculations are as follows:

- Monthly average: \( \frac{9.0 \text{ lbs./day}}{8.34 \text{ lbs./gal.} \times 0.007140 \text{ MGD}} = 151 \text{ mg/L} \)
- Daily maximum: \( \frac{30 \text{ lbs./day}}{8.34 \text{ lbs./gal.} \times 0.010710 \text{ MGD}} = 336 \text{ mg/L} \)

A review of the DMR data for the period January 2007 – February 2012 indicates the following:

**TSS Mass (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (lbs./day)</th>
<th>Range (lbs./day)</th>
<th>Average (lbs./day)</th>
</tr>
</thead>
<tbody>
<tr>

<td>Daily Maximum</td>
<td>336</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

TSS (Clam Processing)

Long term average = 0.04 lbs./day  
Monthly average limit = 9 lbs./day  
Current monitoring frequency = 1/Week

Ratio = \( \frac{0.04 \text{ lbs./day}}{9.0 \text{ lbs./day}} \approx 0.4\% \)

The previous permitting action established and this permitting action is carrying forward a monitoring frequency for TSS of 1/Month for wastewater associated with clam processing.

f. Oil & Grease (O&G) – The previous permitting action established a technology concentration limit as follows:

<table>
<thead>
<tr>
<th></th>
<th>504</th>
<th>1,426</th>
<th>1,512</th>
<th>2,854</th>
<th>0.12</th>
<th>2.0</th>
<th>0.30</th>
<th>3.3</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Clam Processing</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Shrimp processing**

The NEGs for O&G for shrimp processing are specified in federal regulation 40 CFR 408.112.

According to 40 CFR 408.112, BPT for O&G is as follows:

Monthly average – 42 lbs./1,000 lbs. of production  
Daily maximum – 126 lbs./1,000 lbs. of production

With a monthly average production figure of 12,000 lbs. for shrimp, technology based mass limits are calculated as follows:

Monthly average: \( \frac{12,000 \text{ lbs.}}{\text{day}} \times 42 \text{ lbs.} = 504 \text{ lbs./day} \)

Daily maximum: \( \frac{12,000 \text{ lbs.}}{\text{day}} \times 126 \text{ lbs.} = 1,512 \text{ lbs./day} \)
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

To ensure BPT is being achieved at lower levels of production, the Department is establishing monthly average and daily maximum concentration limits for O&G. The concentration limits were derived by a back-calculation using the respective monthly average and daily maximum mass and flow limitations. The calculations are as follows:

Monthly average: 
\[
\frac{504 \text{ lbs./day}}{(8.34 \text{ lbs./gal.})(0.042350 \text{ MGD})} = 1,426 \text{ mg/L}
\]

Daily maximum: 
\[
\frac{1,512 \text{ lbs./day}}{(8.34 \text{ lbs./gal.})(0.063525 \text{ MGD})} = 2,854 \text{ mg/L}
\]

A review of the DMR data for the period January 2007 – February 2012 indicates the following:

<table>
<thead>
<tr>
<th>Oil &amp; Grease Mass (DMRs = 0)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value</td>
</tr>
<tr>
<td>Monthly Average</td>
</tr>
<tr>
<td>Daily Maximum</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Oil &amp; Grease Concentration (DMRs = 0)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value</td>
</tr>
<tr>
<td>Monthly Average</td>
</tr>
<tr>
<td>Daily Maximum</td>
</tr>
</tbody>
</table>

**Oil & Grease (Shrimp Processing)**

Long term average = 4.6 lbs./day  
Monthly average limit = 504 lbs./day  
Current monitoring frequency = 1/Week

Ratio = \[
\frac{4.6 \text{ lbs./day}}{504 \text{ lbs./day}} = 0.9\%
\]
6. EFFlUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

**Clam Processing**

According to 40 CFR 408.232, BPT for O&G for clam processing is as follows:

Monthly average – 0.23 lbs./1,000 lbs. of production
Daily maximum – 0.60 lbs./1,000 lbs. of production

With a monthly average production figure of 500 lbs. for clams, technology based mass limits are calculated as follows:

Monthly average: \(\frac{500 \text{ lbs.} \times 0.23 \text{ lbs.}}{1,000 \text{ lbs.}} = 0.12 \text{ lbs./day}\)

Daily maximum: \(\frac{500 \text{ lbs.} \times 0.60 \text{ lbs.}}{1,000 \text{ lbs.}} = 0.3 \text{ lbs./day}\)

To ensure BPT is being achieved at lower levels of production, the Department is establishing monthly average and daily maximum concentration limits for O&G. The concentration limits were derived by a back-calculation using the respective monthly average and daily maximum mass and flow limitations. The calculations are as follows:

Monthly average: \(0.12 \text{ lbs./day} = 2.0 \text{ mg/L}\)
\(\frac{8.34 \text{ lbs./gal.}}{0.007140 \text{ MGD}}\)

Daily maximum: \(0.30 \text{ lbs./day} = 3.3 \text{ mg/L}\)
\(\frac{8.34 \text{ lbs./gal.}}{0.010710 \text{ MGD}}\)

A review of the DMR data for the period January 2007 – February 2012 indicates the following:

**Oil & Grease Mass (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (lbs./day)</th>
<th>Range (lbs./day)</th>
<th>Average (lbs./day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>0.12</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>0.3</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

**Oil & Grease Concentration (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (mg/L)</th>
<th>Range (mg/L)</th>
<th>Average (mg/L)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>2.0</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>3.3</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

This space intentionally left blank
6. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS (cont’d)

**Oil & Grease (Clam Processing)**

Long term average = 0.0044 lbs./day  
Monthly average limit = 0.12 lbs./day  
Current monitoring frequency = 1/Week  

\[ \text{Ratio} = \frac{0.0044 \text{ lbs./day}}{0.12 \text{ lbs./day}} = 4\% \]

**g. Total Residual Chlorine (TRC):** The previous permitting action established monthly average and daily maximum concentration limitations as follows:

<table>
<thead>
<tr>
<th></th>
<th>Shrimp Processing</th>
<th>Clam Processing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>Daily Max</td>
<td>Monthly Average</td>
</tr>
<tr>
<td>n/a</td>
<td>1.0 mg/L</td>
<td>0.19 mg/L</td>
</tr>
</tbody>
</table>

Limits on total residual chlorine are specified to ensure attainment of the in-stream water quality criteria for chlorine and that BPT technology is utilized to abate the discharge of chlorine. Permits issued by this Department impose the more stringent of the calculated water quality based or BPT based limits. The Department has established a daily maximum BPT limitation of 1.0 mg/L for facilities that disinfect their effluent with elemental chlorine or chlorine based compounds unless the calculated acute water quality based threshold is lower than 1.0 mg/L. For facilities that need to de-chlorinate the discharge to meet water quality based thresholds (BQS has done so to date), the Department has established daily maximum and monthly average BPT limits of 0.3 mg/L and 0.1 mg/L respectively.

**Shrimp processing**

Water quality based thresholds for TRC may be calculated from the acute and chronic AWQC of 0.013 mg/L and 0.0075 mg/L, respectively.

<table>
<thead>
<tr>
<th>Calculated</th>
<th>Acute (A)</th>
<th>Chronic (C)</th>
<th>Dilution Factors</th>
<th>Acute Limit</th>
<th>Chronic Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Criterion</td>
<td>0.013 mg/L</td>
<td>0.0075 mg/L</td>
<td>20:1 25:1</td>
<td>0.26 mg/L</td>
<td>0.19 mg/L</td>
</tr>
</tbody>
</table>

The monthly average and daily maximum water quality based limits calculated above are more stringent than the Department’s BPT limits of 0.1 mg/L and 0.3 mg/L respectively. Therefore, the water quality based limits are being carried forward in this permitting action.

This space intentionally left blank
6. EFFLUENT LIMITATIONS & MONITORING REQUIREMENTS (cont’d)

A review of the DMR data for the period January 2012 – January 2017 indicates the following:

**Total residual chlorine concentration (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (mg/L)</th>
<th>Range (mg/L)</th>
<th>Average (mg/L)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>0.19</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>0.26</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

**Clam Processing**

<table>
<thead>
<tr>
<th>Acute (A)</th>
<th>Chronic (C)</th>
<th>Dilution Factors</th>
<th>Calculated Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Criterion</td>
<td>Criterion</td>
<td>(A)</td>
<td>Acute Chronic</td>
</tr>
<tr>
<td>0.013 mg/L</td>
<td>0.0075 mg/L</td>
<td>120:1</td>
<td>1.6 mg/L</td>
</tr>
<tr>
<td></td>
<td></td>
<td>150:1</td>
<td>1.1 mg/L</td>
</tr>
</tbody>
</table>

The Department’s BPT limit of 1.0 mg/L is more stringent than the monthly average and daily maximum water quality based thresholds calculated above. Therefore, the BPT limit of 1.0 mg/L is being established as a daily maximum limit for the discharge to Jones Creek.

A review of the DMR data for the period January 2012 – January 2017 indicates the following:

**Total residual chlorine concentration (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (mg/L)</th>
<th>Range (mg/L)</th>
<th>Average (mg/L)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daily Maximum</td>
<td>1.0</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

**h. pH** – The previous permitting action established a pH range limitation of 6.0 – 9.0 standard units based on the BPT pH limitation in 40 CFR, §408.112 and is being carried forward in this permitting action for both the shrimp and clam processing.

A review of the monthly DMR data for the period January 2012 – January 2017 indicates the range limitation has never been violated.

**Shrimp processing**

**Total residual chlorine concentration (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (su)</th>
<th>Range (su)</th>
<th>Average (su)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum</td>
<td>6.0</td>

</tbody>
</table>

**Clam processing**

**Total residual chlorine concentration (DMRs = 0)**

<table>
<thead>
<tr>
<th>Value</th>
<th>Limit (su)</th>
<th>Range (su)</th>
<th>Average (su)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum</td>
<td>6.0</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Maximum</td>
<td>9.0</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>
6. EFFLUENT LIMITATIONS & MONITORING REQUIREMENTS (cont’d)

i. Biochemical oxygen demand (BOD) – The NEGs have not established BPT limitations for BOD in the shrimp processing subpart. The previous permitting action established monthly average and daily maximum mass and concentration limits based on a statistical evaluation of the historic effluent data for the period January 2005 – March 2007. Being that concentration values are representative of the treatment of the wastewater being discharged, the Department calculated a monthly average concentration of 966 mg/L as representing the 95th percentile (two standard deviations) of the data and the daily maximum concentration of 1,710 mg/L as being representative of the 99th percentile of the data. These respective values were established as technology based concentration limits in this permit. Holding the respective concentrations limits, technology based mass limits can be calculated as follows:

Monthly average: \[ 966 \text{ mg/L (8.34 lbs.)}(0.042359 \text{ MGD}) = 341 \text{ lbs./day gal.} \]

Daily maximum: \[ 1,710 \text{ lbs. (8.34 lbs.)}(0.042359 \text{ MGD}) = 604 \text{ lbs./day gal.} \]

A review of the DMR data for the period January 2012 – January 2017 indicates the following:

<table>
<thead>
<tr>
<th>BOD Mass (DMRs = 0)</th>
<th>Limit (lbs./day)</th>
<th>Range (lbs./day)</th>
<th>Average (lbs./day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>341</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>604</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>BOD Concentration (DMRs = 0)</th>
<th>Limit (mg/L)</th>
<th>Range (mg/L)</th>
<th>Average (mg/L)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Average</td>
<td>966</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Daily Maximum</td>
<td>1,710</td>
<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

As for clam processing, the previous permitting action did not establish any numeric limitations for BOD. The permit did require the permittee to report both monthly average and daily maximum mass and concentration results for BOD. Federal regulation 40 CFR §408.230 does not establish NEGs for BOD. Therefore, the Department is carrying forward the “report” only requirements of the previous permitting action.

This space intentionally left blank
6. EFFLUENT LIMITATIONS & MONITORING REQUIREMENTS (cont’d)

A review of the DMR data for the period January 2012 – January 2017 indicates the following:

### BOD Mass (DMRs = 0)

<table>
<thead>
<tr>

j. Nitrogen

The Department has conducted a dilution analysis based on the amount of tidal flushing experienced at the discharge location. Typical dilutions are well in excess of 1,000:1. The discharge is expected to have a total nitrogen concentration of approximately 14 mg/l. Based on a dilution of 1,000:1, this discharge would be expected to have a negligible impact ambient total nitrogen concentration (approximately 0.014 mg/l). Ambient total nitrogen concentrations in the vicinity of the discharge are expected to be naturally high, due to the unusually high concentration of marshland in the upgradient watershed.

7. DISCHARGE IMPACT ON RECEIVING WATER QUALITY

As permitted, the Department has determined the existing water uses will be maintained and protected and the discharge will not cause or contribute to the failure of the groundwater or the Jones Creek to meet standards for Class GW-A or Class SB classifications, respectively.

8. PUBLIC COMMENTS

Public notice of this application was made in the *Portland Press Herald* newspaper on or about September 22, 2017. The Department receives public comments on an application until the date a final agency action is taken on the application. Those persons receiving copies of draft permits must have at least 30 days in which to submit comments on the draft or to request a public hearing, pursuant to *Application Processing Procedures for Waste Discharge Licenses*, 06-096 CMR 522 (effective January 12, 2001).
9. DEPARTMENT CONTACTS

Additional information concerning this permitting action may be obtained from, and written comments sent to:

Revised July 1, 2002
A. GENERAL PROVISIONS

1. General compliance. All discharges shall be consistent with the terms and conditions of this permit; any changes in production capacity or process modifications which result in changes in the quantity or the characteristics of the discharge must be authorized by an additional license or by modifications of this permit; it shall be a violation of the terms and conditions of this permit to discharge any pollutant not identified and authorized herein or to discharge in excess of the rates or quantities authorized herein or to violate any other conditions of this permit.

2. Other materials. Other materials ordinarily produced or used in the operation of this facility, which have been specifically identified in the application, may be discharged at the maximum frequency and maximum level identified in the application, provided:

   (a) They are not

      (i) Designated as toxic or hazardous under the provisions of Sections 307 and 311, respectively, of the Federal Water Pollution Control Act; Title 38, Section 420, Maine Revised Statutes; or other applicable State Law; or

      (ii) Known to be hazardous or toxic by the licensee.

   (b) The discharge of such materials will not violate applicable water quality standards.

3. Duty to comply. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of State law and the Clean Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application.

   (a) The permittee shall comply with effluent standards or prohibitions established under section 307(a) of the Clean Water Act, and 38 MRSA, §420 or Chapter 530.5 for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.

   (b) Any person who violates any provision of the laws administered by the Department, including without limitation, a violation of the terms of any order, rule license, permit, approval or decision of the Board or Commissioner is subject to the penalties set forth in 38 MRSA, §349.

4. Duty to provide information. The permittee shall furnish to the Department, within a reasonable time, any information which the Department may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to the Department upon request, copies of records required to be kept by this permit.

5. Permit actions. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

6. Reopener clause. The Department reserves the right to make appropriate revisions to this permit in order to establish any appropriate effluent limitations, schedule of compliance or other provisions which may be authorized under 38 MRSA, §414-A(5).
7. Oil and hazardous substances. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities or penalties to which the permittee is or may be subject under section 311 of the Federal Clean Water Act; section 106 of the Federal Comprehensive Environmental Response, Compensation and Liability Act of 1980; or 38 MRSA §§ 1301, et. seq.

8. Property rights. This permit does not convey any property rights of any sort, or any exclusive privilege.

9. Confidentiality of records. 38 MRSA §414(6) reads as follows. "Any records, reports or information obtained under this subchapter is available to the public, except that upon a showing satisfactory to the department by any person that any records, reports or information, or particular part or any record, report or information, other than the names and addresses of applicants, license applications, licenses, and effluent data, to which the department has access under this subchapter would, if made public, divulge methods or processes that are entitled to protection as trade secrets, these records, reports or information must be confidential and not available for public inspection or examination. Any records, reports or information may be disclosed to employees or authorized representatives of the State or the United States concerned with carrying out this subchapter or any applicable federal law, and to any party to a hearing held under this section on terms the commissioner may prescribe in order to protect these confidential records, reports and information, as long as this disclosure is material and relevant to any issue under consideration by the department."

10. Duty to reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit.

11. Other laws. The issuance of this permit does not authorize any injury to persons or property or invasion of other property rights, nor does it relieve the permittee if its obligation to comply with other applicable Federal, State or local laws and regulations.

12. Inspection and entry. The permittee shall allow the Department, or an authorized representative (including an authorized contractor acting as a representative of the EPA Administrator), upon presentation of credentials and other documents as may be required by law, to:

   (a) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
   (b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
   (c) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and
   (d) Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

B. OPERATION AND MAINTENANCE OF FACILITIES

1. General facility requirements.

   (a) The permittee shall collect all waste flows designated by the Department as requiring treatment and discharge them into an approved waste treatment facility in such a manner as to
maximize removal of pollutants unless authorization to the contrary is obtained from the Department.

(b) The permittee shall at all times maintain in good working order and operate at maximum efficiency all waste water collection, treatment and/or control facilities.

(c) All necessary waste treatment facilities will be installed and operational prior to the discharge of any wastewaters.

(d) Final plans and specifications must be submitted to the Department for review prior to the construction or modification of any treatment facilities.

(e) The permittee shall install flow measuring facilities of a design approved by the Department.

(f) The permittee must provide an outfall of a design approved by the Department which is placed in the receiving waters in such a manner that the maximum mixing and dispersion of the wastewaters will be achieved as rapidly as possible.

2. Proper operation and maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

3. Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

4. Duty to mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

5. Bypasses.

(a) Definitions.

(i) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.

(ii) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

(b) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (c) and (d) of this section.

(c) Notice.

(i) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass.
(ii) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph D(1)(f), below. (24-hour notice).

(d) Prohibition of bypass.

(i) Bypass is prohibited, and the Department may take enforcement action against a permittee for bypass, unless:

(A) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
(B) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
(C) The permittee submitted notices as required under paragraph (c) of this section.

(ii) The Department may approve an anticipated bypass, after considering its adverse effects, if the Department determines that it will meet the three conditions listed above in paragraph (d)(i) of this section.

6. Upsets.

(a) Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

(b) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (c) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(c) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

(i) An upset occurred and that the permittee can identify the cause(s) of the upset;
(ii) The permitted facility was at the time being properly operated; and
(iii) The permittee submitted notice of the upset as required in paragraph D(1)(f), below. (24 hour notice).
(iv) The permittee complied with any remedial measures required under paragraph B(4).

(d) Burden of proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.
C. MONITORING AND RECORDS

1. General Requirements. This permit shall be subject to such monitoring requirements as may be reasonably required by the Department including the installation, use and maintenance of monitoring equipment or methods (including, where appropriate, biological monitoring methods). The permittee shall provide the Department with periodic reports on the proper Department reporting form of monitoring results obtained pursuant to the monitoring requirements contained herein.

2. Representative sampling. Samples and measurements taken as required herein shall be representative of the volume and nature of the monitored discharge. If effluent limitations are based wholly or partially on quantities of a product processed, the permittee shall ensure samples are representative of times when production is taking place. Where discharge monitoring is required when production is less than 50%, the resulting data shall be reported as a daily measurement but not included in computation of averages, unless specifically authorized by the Department.

3. Monitoring and records.

   (a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

   (b) Except for records of monitoring information required by this permit related to the permittee's sewage sludge use and disposal activities, which shall be retained for a period of at least five years, the permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by request of the Department at any time.

   (c) Records of monitoring information shall include:

      (i) The date, exact place, and time of sampling or measurements;
      (ii) The individual(s) who performed the sampling or measurements;
      (iii) The date(s) analyses were performed;
      (iv) The individual(s) who performed the analyses;
      (v) The analytical techniques or methods used; and
      (vi) The results of such analyses.

   (d) Monitoring results must be conducted according to test procedures approved under 40 CFR part 136, unless other test procedures have been specified in the permit.

   (e) State law provides that any person who tampers with or renders inaccurate any monitoring devices or method required by any provision of law, or any order, rule license, permit approval or decision is subject to the penalties set forth in 38 MRSA, §349.
D. REPORTING REQUIREMENTS

1. Reporting requirements.

(a) Planned changes. The permittee shall give notice to the Department as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

(i) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in 40 CFR 122.29(b); or
(ii) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under Section D(4).
(iii) The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan;

(b) Anticipated noncompliance. The permittee shall give advance notice to the Department of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

(c) Transfers. This permit is not transferable to any person except upon application to and approval of the Department pursuant to 38 MRSA, § 344 and Chapters 2 and 522.

(d) Monitoring reports. Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(i) Monitoring results must be reported on a Discharge Monitoring Report (DMR) or forms provided or specified by the Department for reporting results of monitoring of sludge use or disposal practices.
(ii) If the permittee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR part 136 or as specified in the permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Department.
(iii) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Department in the permit.

(e) Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(f) Twenty-four hour reporting.

(i) The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance
has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

(ii) The following shall be included as information which must be reported within 24 hours under this paragraph.

(A) Any unanticipated bypass which exceeds any effluent limitation in the permit.
(B) Any upset which exceeds any effluent limitation in the permit.
(C) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Department in the permit to be reported within 24 hours.

(iii) The Department may waive the written report on a case-by-case basis for reports under paragraph (f)(ii) of this section if the oral report has been received within 24 hours.

(g) Other noncompliance. The permittee shall report all instances of noncompliance not reported under paragraphs (d), (e), and (f) of this section, at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (f) of this section.

(h) Other information. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Department, it shall promptly submit such facts or information.

2. Signatory requirement. All applications, reports, or information submitted to the Department shall be signed and certified as required by Chapter 521, Section 5 of the Department's rules. State law provides that any person who knowingly makes any false statement, representation or certification in any application, record, report, plan or other document filed or required to be maintained by any order, rule, permit, approval or decision of the Board or Commissioner is subject to the penalties set forth in 38 MRSA, §349.

3. Availability of reports. Except for data determined to be confidential under A(9), above, all reports prepared in accordance with the terms of this permit shall be available for public inspection at the offices of the Department. As required by State law, effluent data shall not be considered confidential. Knowingly making any false statement on any such report may result in the imposition of criminal sanctions as provided by law.

4. Existing manufacturing, commercial, mining, and silvicultural dischargers. In addition to the reporting requirements under this Section, all existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Department as soon as they know or have reason to believe:

(a) That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(i) One hundred micrograms per liter (100 ug/l);
(ii) Two hundred micrograms per liter (200 ug/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 ug/l) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter (1 mg/l) for antimony;
(iii) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with Chapter 521 Section 4(g)(7); or
(iv) The level established by the Department in accordance with Chapter 523 Section 5(f).
MAINE POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT

STANDARD CONDITIONS APPLICABLE TO ALL PERMITS

(b) That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(i) Five hundred micrograms per liter (500 ug/l);
(ii) One milligram per liter (1 mg/l) for antimony;
(iii) Ten (10) times the maximum concentration value reported for that pollutant in the permit application in accordance with Chapter 521 Section 4(g)(7); or
(iv) The level established by the Department in accordance with Chapter 523 Section 5(f).

5. Publicly owned treatment works.

(a) All POTWs must provide adequate notice to the Department of the following:

(i) Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to section 301 or 306 of CWA or Chapter 528 if it were directly discharging those pollutants.
(ii) Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.
(iii) For purposes of this paragraph, adequate notice shall include information on (A) the quality and quantity of effluent introduced into the POTW, and (B) any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

(b) When the effluent discharged by a POTW for a period of three consecutive months exceeds 80 percent of the permitted flow, the permittee shall submit to the Department a projection of loadings up to the time when the design capacity of the treatment facility will be reached, and a program for maintaining satisfactory treatment levels consistent with approved water quality management plans.

E. OTHER REQUIREMENTS

1. Emergency action - power failure. Within thirty days after the effective date of this permit, the permittee shall notify the Department of facilities and plans to be used in the event the primary source of power to its wastewater pumping and treatment facilities fails as follows.

(a) For municipal sources. During power failure, all wastewaters which are normally treated shall receive a minimum of primary treatment and disinfection. Unless otherwise approved, alternate power supplies shall be provided for pumping stations and treatment facilities. Alternate power supplies shall be on-site generating units or an outside power source which is separate and independent from sources used for normal operation of the wastewater facilities.

(b) For industrial and commercial sources. The permittee shall either maintain an alternative power source sufficient to operate the wastewater pumping and treatment facilities or halt, reduce or otherwise control production and or all discharges upon reduction or loss of power to the wastewater pumping or treatment facilities.
2. Spill prevention. (applicable only to industrial sources) Within six months of the effective date of this permit, the permittee shall submit to the Department for review and approval, with or without conditions, a spill prevention plan. The plan shall delineate methods and measures to be taken to prevent and or contain any spills of pulp, chemicals, oils or other contaminants and shall specify means of disposal and or treatment to be used.

3. Removed substances. Solids, sludges trash rack cleanings, filter backwash, or other pollutants removed from or resulting from the treatment or control of waste waters shall be disposed of in a manner approved by the Department.

4. Connection to municipal sewer. (applicable only to industrial and commercial sources) All wastewaters designated by the Department as treatable in a municipal treatment system will be cosigned to that system when it is available. This permit will expire 90 days after the municipal treatment facility becomes available, unless this time is extended by the Department in writing.

F. DEFINITIONS. For the purposes of this permit, the following definitions shall apply. Other definitions applicable to this permit may be found in Chapters 520 through 529 of the Department's rules

Average means the arithmetic mean of values taken at the frequency required for each parameter over the specified period. For bacteria, the average shall be the geometric mean.

Average monthly discharge limitation means the highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month. Except, however, bacteriological tests may be calculated as a geometric mean.

Average weekly discharge limitation means the highest allowable average of daily discharges over a calendar week, calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

Best management practices ("BMPs") means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the State. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Composite sample means a sample consisting of a minimum of eight grab samples collected at equal intervals during a 24 hour period (or a lesser period as specified in the section on monitoring and reporting) and combined proportional to the flow over that same time period.

Continuous discharge means a discharge which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities.

Daily discharge means the discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the daily discharge is calculated as the average measurement of the pollutant over the day.
Discharge Monitoring Report ("DMR") means the EPA uniform national form, including any subsequent additions, revisions, or modifications for the reporting of self-monitoring results by permittees. DMRs must be used by approved States as well as by EPA. EPA will supply DMRs to any approved State upon request. The EPA national forms may be modified to substitute the State Agency name, address, logo, and other similar information, as appropriate, in place of EPA's.

Flow weighted composite sample means a composite sample consisting of a mixture of aliquots collected at a constant time interval, where the volume of each aliquot is proportional to the flow rate of the discharge.

Grab sample means an individual sample collected in a period of less than 15 minutes.

Interference means a Discharge which, alone or in conjunction with a discharge or discharges from other sources, both:

1. Inhibits or disrupts the POTW, its treatment processes or operations, or its sludge processes, use or disposal; and
2. Therefore is a cause of a violation of any requirement of the POTW's NPDES permit (including an increase in the magnitude or duration of a violation) or of the prevention of sewage sludge use or disposal in compliance with the following statutory provisions and regulations or permits issued thereunder (or more stringent State or local regulations): Section 405 of the Clean Water Act, the Solid Waste Disposal Act (SWDA) (including title II, more commonly referred to as the Resource Conservation and Recovery Act (RCRA), and including State regulations contained in any State sludge management plan prepared pursuant to subtitle D of the SWDA), the Clean Air Act, the Toxic Substances Control Act, and the Marine Protection, Research and Sanctuaries Act.

Maximum daily discharge limitation means the highest allowable daily discharge.

New source means any building, structure, facility, or installation from which there is or may be a discharge of pollutants, the construction of which commenced:

1. After promulgation of standards of performance under section 306 of CWA which are applicable to such source, or
2. After proposal of standards of performance in accordance with section 306 of CWA which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within 120 days of their proposal.

Pass through means a discharge which exits the POTW into waters of the State in quantities or concentrations which, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirement of the POTW's NPDES permit (including an increase in the magnitude or duration of a violation).

Permit means an authorization, license, or equivalent control document issued by EPA or an approved State to implement the requirements of 40 CFR parts 122, 123 and 124. Permit includes an NPDES general permit (Chapter 529). Permit does not include any permit which has not yet been the subject of final agency action, such as a draft permit or a proposed permit.

Person means an individual, firm, corporation, municipality, quasi-municipal corporation, state agency, federal agency or other legal entity.
**Point source** means any discernible, confined and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation or vessel or other floating craft, from which pollutants are or may be discharged.

**Pollutant** means dredged spoil, solid waste, junk, incinerator residue, sewage, refuse, effluent, garbage, sewage sludge, munitions, chemicals, biological or radiological materials, oil, petroleum products or byproducts, heat, wrecked or discarded equipment, rock, sand, dirt and industrial, municipal, domestic, commercial or agricultural wastes of any kind.

**Process wastewater** means any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, byproduct, or waste product.

**Publicly owned treatment works ("POTW")** means any facility for the treatment of pollutants owned by the State or any political subdivision thereof, any municipality, district, quasi-municipal corporation or other public entity.

**Septage** means, for the purposes of this permit, any waste, refuse, effluent sludge or other material removed from a septic tank, cesspool, vault privy or similar source which concentrates wastes or to which chemicals have been added. Septage does not include wastes from a holding tank.

**Time weighted composite** means a composite sample consisting of a mixture of equal volume aliquots collected over a constant time interval.

**Toxic pollutant** includes any pollutant listed as toxic under section 307(a)(1) or, in the case of sludge use or disposal practices, any pollutant identified in regulations implementing section 405(d) of the CWA. Toxic pollutant also includes those substances or combination of substances, including disease causing agents, which after discharge or upon exposure, ingestion, inhalation or assimilation into any organism, including humans either directly through the environment or indirectly through ingestion through food chains, will, on the basis of information available to the board either alone or in combination with other substances already in the receiving waters or the discharge, cause death, disease, abnormalities, cancer, genetic mutations, physiological malfunctions, including malfunctions in reproduction, or physical deformations in such organism or their offspring.

**Wetlands** means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

**Whole effluent toxicity** means the aggregate toxic effect of an effluent measured directly by a toxicity test.
