Subject: General Mills Follow-Up

Hello Albert,

I hope you are doing well. I just wanted to check back in regarding our meeting with General Mills last month and see if you needed any additional information on our end or if we could answer any questions you might have. We very much appreciated your time and your offer to look into the former General Mills site in Minneapolis.

Again we would be more than willing to have our technical experts meet with your technical experts to go over the analysis at a date of your convenience. Please let us know if this is something you would be interested in. Thanks again.

Regards,

Darrin R. Munoz

Dear Chairman Kelly and Mr. Falvo,

At Mr. Falvo's request, and in follow up to your July 12 meeting with General Mills, I am forwarding the supplemental report of General Mills' experts, Mike Kavanaugh at Geosyntec and Tom McHugh at GIS, which Larry Deeney of General Mills sent to MPCA this morning concerning MPCA's 2017 investigation results. These results show significant sources of TCE on the Sears property and on other areas up gradient of the General Mills/Henkel Site.

If you would like to discuss, we would be pleased to do so.

Regards,

Delmar R. Ehrich

Subject: Southeast Hennepin Groundwater and Vapor Intrusion Site

Tim and Al,

Please see our attached response based on recent data provided by the Agency pertaining to the Southeast Hennepin Groundwater and Vapor Intrusion Site. I'll also send a hardcopy to you in the mail.

After you've had a chance to review, let me know if you'd like to discuss.

GENERAL MILLS

[View our 2017 Global Responsibility Report](#)

Update to the Conceptual Site Model of TCE Impacts at and Down Gradient of the Southeast Hennepin Area Groundwater and Vapor State Superfund Site

Prepared by: GSI Environmental Inc. and Geosyntec Consultants.
Prepared for: General Mills, Inc.
25 August 2017

GSI Environmental and Geosyntec Consultants have previously submitted reviews of environmental conditions at the former General Mills, Inc. facility ("Facility") located at 2010 East Hennepin Avenue, Minneapolis, Minnesota ("East Hennepin Site") (GSI, 2017; Geosyntec, 2017). The East Hennepin Site also has been referred to as the General Mills/Henkel Corporation Superfund Site. In this short Technical Note, we provide an update to the previously reported Conceptual Site Model ("Model"). This update is based on new data (i.e., April/May 2017 soil and groundwater sampling results collected by the Minnesota Pollution Control Agency ("MPCA")) that provide further confirmation and detail regarding significant impacts to soil and groundwater by TCE from significant sources up gradient of the Facility. These data confirm a significant TCE source on or near 2600 Winter St. NE, a property owned since approximately 1964 by Sears ("Sears property"). This TCE source, as well as other sources not yet identified, have been contaminating the groundwater for decades and still impact the East Hennepin Site and the Como neighborhood. The April/May 2017 sampling data further confirm the existence of these up gradient sources and our Model for the area. These data further reinforce our key conclusions: 1) that the historical releases from the Facility have been fully remediated; 2) that the Facility is not a source of TCE to the groundwater beneath the East Hennepin Site; and 3) that up gradient sources of TCE fully explain the persistent TCE plume.

THE MODEL AND KEY CONCLUSIONS REGARDING THE EAST HENNEPIN SITE AND UP GRADIENT SOURCES OF TCE IMPACTS TO SOIL AND GROUNDWATER.

In March 2017, GSI and Geosyntec reported the following key conclusions to the MPCA:

1. The historic Model was founded on two faulty assumptions: 1) that solvent wastes from the former disposal area at the Facility caused all groundwater impacts, and 2) that these wastes contained significant amounts of TCE. However, data presented in our March 2017 reports demonstrated that neither of these conclusions is supported by primary evidence;
2. The General Mills waste material had a unique signature containing only minor amounts of TCE;
3. General Mills waste material was confined to a small area in the immediate vicinity of the GMI disposal area at the Facility;
4. The General Mills waste was not, and is not, a dense non-aqueous phase liquid source of impacts to groundwater and soil gas;

5. The soil and groundwater impacts associated with the Facility have been fully remediated;
6. The Facility is not a source of TCE to groundwater or soil vapor;
7. TCE from up gradient sources has been contaminating the area for decades – and still impact the Como Neighborhood, including the East Hennepin Site;
8. No additional remedial actions are necessary to address impacts from the Facility; and
9. The MPCA must revise its CSM to address the up gradient TCE sources instead of the fully remediated impacts from the Facility.

NEW DATA (APRIL/MAY 2017) PROVIDE FURTHER SUPPORT FOR THE MODEL THAT THERE ARE SIGNIFICANT TCE SOURCES IN THE SOUTHEAST HENNEPIN AREA, INCLUDING THE SEARS PROPERTY, THAT FULLY EXPLAIN THE PERSISTENT TCE GROUNDWATER PLUME IN BOTH AREAS.

In April and May 2017, the MPCA conducted additional investigations within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site (located up gradient of the East Hennepin Site), including collection of groundwater samples from 10 existing groundwater monitoring wells and collection of soil and groundwater samples from 13 new sample points (not including SP-30, located at SE 19th Ave. and SE Elm Street). These new data (Figure 1) corroborate our earlier conclusions related to this area.

MPCA's April/May 2017 results provide further strong support for the new Model, specifically that significant sources of TCE up gradient of the former General Mills facility, including the Sears property, have impacted groundwater for decades.

The new investigation results provide important additional evidence for the Model presented to MPCA in March 2017. The new data indicate a significant TCE source on the Sears property. TCE concentrations in groundwater immediately down gradient of the Sears property (south and west) were as high as 2,020 µg/L at SP-22 (Figure 1) while the TCE concentrations measured up gradient of the Sears property (north and east) were much lower (a maximum of 128 µg/L at SP-29).

These investigation results show that the most significant source of TCE within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site is located on the Sears property (i.e., the area between SP-22 and SP-29) (Figure 1). Although additional source(s) of TCE are present within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site – particularly to the north and east of the Sears property – these new MPCA results indicate that additional investigation should be conducted on the Sears property to characterize and remediate this significant historical TCE release.

The sources of TCE within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site fully explain the current TCE plume.

The new investigation results support our prior finding that the TCE plume originates within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site. The new MPCA investigation results (Figure 1), along with recent more comprehensive area-wide monitoring results, show that TCE concentrations in groundwater within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site are much higher than in down gradient areas, including areas on or near the former General Mills Facility. These recent data, which are consistent with prior data indicating high concentrations of TCE in groundwater within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site, have been present for decades (GSI 2017 and Geosyntec 2017). These data reinforce our earlier conclusions that the impacts associated with the Facility have been fully remediated and that the Facility is not a TCE source to groundwater beneath the area.

SUMMARY AND CONCLUSIONS

The new investigation results obtained by the MPCA in April and May 2017 support the Model which we presented to the MPCA in March 2017 and corroborate the previous conclusion that the sources of TCE within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site fully explain the current TCE plume in groundwater. The new data provide no evidence that the East Hennepin Site is an on-going source of TCE in groundwater. We reiterate our conclusion that no additional response actions are necessary to address impacts associated with the historical activities at the General Mills/Henkel Facility. No up gradient investigation will alter these findings and conclusions as to the East Hennepin Site.

Therefore, the MPCA must update its current model to accurately reflect the historical, present and ongoing impacts of TCE from the source on the Sears property and from other potential sources up gradient of that property on the East Hennepin Site and other areas in the Como neighborhood.

Re: Southeast Hennepin Groundwater and Vapor Intrusion Site

Dear Messrs. Timm and Grape:

I enclose a supplemental report by Geosyntec and GSI based on the soil and groundwater sampling data collected by the MPCA in April 2017.

These investigation results demonstrate that the TCE plume originates within the Southeast Hennepin Area Groundwater and Vapor State Superfund Site ("the Site."). In particular, these results demonstrate that there is a significant TCE release on the Sears property at 2600 Winter Street NE which, according to publicly available information, has been owned by Sears since 1964. The TCE concentrations measured in groundwater at the southwest boundary of the Sears site were significantly higher than TCE concentrations measured at the northeast (up gradient) boundaries of the Sears site. There is much more TCE leaving the Sears property on its southwest boundary than what is entering the Sears property on the up gradient, northeast boundary of the Sears property. In addition, the TCE on the northeast boundary of the Sears property shows that there are TCE sources up gradient of the Sears property.

One General Mills Boulevard • Golden Valley, Minnesota • 55426

These results fully explain the continuing presence of TCE in groundwater and soil vapor. The new data provide no evidence that the General Mills/Henkel site is an ongoing source of TCE in groundwater. No additional response actions are necessary to address impacts associated with the historical activities at the General Mills/Henkel site. No up gradient investigation will alter these findings and conclusions as to the General Mills/Henkel site.

Accordingly, General Mills reiterates its demand that MPCA do two things:

1. Demand that those parties responsible for the up gradient TCE sources, including Sears, investigate and remediate those releases; and
2. De-list the General Mills/Henkel site from the Minnesota Permanent List of Priorities (PPL) and cooperate with U.S. EPA to de-list the General Mills/Henkel site from the National Priority List (NPL).

We would be pleased to discuss this matter further.

Sincerely,

A handwritten signature in black ink, appearing to read 'Larry Deeney', with a stylized, cursive script.

Hello Albert,

At our meeting last Thursday I invited you to speak at our Insights Lunch on Superfund reform. I've attached an official invite with more information such as date and time. We would be very honored to have you as a speaker. Please let me know if you think you might be interested and able to participate. I'd be happy to get on the phone with you and provide you with more information. Thank you.

Regards,

Darrin R. Munoz

Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, D.C. 20460

Dear Mr. Kelly:

I hope you are doing well. I enjoyed visiting with you over the last several weeks on issues related to Superfund reform.

My firm is pleased to be hosting a Faegre Baker Daniels Insights Luncheon on Superfund reform policy September 21st at the City Club here in Washington, D.C. from 12:00 noon — 1:30 p.m. Given your expertise and role as Chairman of the Superfund Task Force, we would be honored if you would consider joining us as a speaker. We strongly believe that you would add great value and perspective to this event. In the past, we have held these Insights luncheons with members of Congress, most recently with Senator Cassidy (closed to press), and commissioners from both the FCC and FTC.

We typically invite a small number of press, however, if you prefer, we can make it a closed event. We believe with press in the room it will provide you with an opportunity to promote the Superfund Task Force's recommendations for streamlining the Superfund program.

We anticipate approximately 25-35 attendees consisting of clients, members of our firm and invitees from across the industry in Washington, D.C. I would be happy to share the attendee list with you prior to the event. Please let me know if you have questions.

Thank you for your consideration.

Best regards,

Darrin R. Munoz
Director

Albert and Nick,

Thank you for taking the time to meet with the General Mills team today. We very much appreciated your time and your offer to look into the former General Mills site in Minneapolis. We gave you a hard copy of several reports on this matter, but wanted to supply you with electronic attachments as well. Attached you will find:

1. Letter of General Mills to MPCA, regarding the General Mills/Henkel Superfund Site, dated march 15, 2017;
2. Supplemental Report on VOC Sources and Remediation at the General Mills/Henkel Superfund Site, dated March 15, 2017 (prepared by Mike Kavanaugh at Geoyntec); and
3. Evaluation of Remedy Completeness at the General Mills/Henkel Superfund Site, dated March 14, 2017 (prepared by Tom McHugh of GSI).

Additionally, if need be we would be more than willing to have our technical experts meet with your technical experts to go over the analysis at a date of your convenience. Please let us know if this is something you would be interested in. Thanks again.

Albert,

Please accept our sincere appreciation for the outstanding presentation you made at our Insight Lunch yesterday. The attendees gained valuable insight into the CERCLA process and Administrator Pruitt's Superfund reform efforts. We hope it was a positive experience for you as well. The information you shared was very enlightening.

Again, our sincere thanks for your time.

Subject: Meeting Request on Behalf of International Paper

Hello Albert and Nick,

My firm represents International Paper and we were wondering if you would be willing to meet with us in the next couple of weeks. The meeting would be with their technical experts and maybe others from the company to discuss a specific Superfund issue that have.

Thank you for your consideration.

Regards,

Darrin R. Munoz

Subject: Follow Up on General Mills Meeting

Albert and Nick,

Thank you for taking the time to meet with the General Mills team today. We very much appreciated your time and your offer to look into the former General Mills site in Minneapolis. We gave you a hard copy of several reports on this matter, but wanted to supply you with electronic attachments as well. Attached you will find:

1. Letter of General Mills to MPCA, regarding the General Mills/Henkel Superfund Site, dated March 15, 2017;
2. Supplemental Report on VOC Sources and Remediation at the General Mills/Henkel Superfund Site, dated March 15, 2017 (prepared by Mike Kavanaugh at Geoyntec); and
3. Evaluation of Remedy Completeness at the General Mills/Henkel Superfund Site, dated March 14, 2017 (prepared by Tom McHugh of GSI).

Additionally, if need be we would be more than willing to have our technical experts meet with your technical experts to go over the analysis at a date of your convenience. Please let us know if this is something you would be interested in. Thanks again.

Regards,

Darrin R. Munoz

Hello Albert,

Please disregard all previous emails and I apologize for the back and forth with dates on this meeting. Can we meet with you on Wednesday, July 12th for General Mills? Hopefully that is the last time I have to bother you on that. Anytime of day works for us.

Additionally, we also have a uranium client, Energy Fuels, who would like to discuss the Navajo Nation abandoned mine cleanup and how they could help. Could we meet with you on Thursday, July 20th for that? Thanks so much.

Hi Albert,

Sorry to keep ping you on this, but can we look to reschedule this meeting for the week of July 10th? The only day that doesn't work would be Monday and Tuesday, but the rest of the week is wide open. I apologize for the change.

Hi Albert,

Just wanted to check back in and see if you've had an opportunity to check with Byron. We want to let the General Mills folks know when they can get their flights. Thank you again for your help.

Hello Albert,

I profusely apologize for the delay in getting back to you. We had some scheduling snafus. Could I and several members of General Mills meet with you and Byron Brown next week? We were hoping anytime Tuesday morning or afternoon or Wednesday morning or afternoon, but will defer to your schedule. Thank you very much.

Subject: Meeting Request for General Mills

Hello Albert,

My firm represents General Mills and we were wondering if you would be willing to meet with us in the next 3-4 weeks. The meeting would be with Gregg Stedronsky, VP, Engineering, Safety & Environment, General Mills and others from the company and our firm to discuss a specific Superfund issue that has ramifications across the country at other sites. The only dates they couldn't do would be July 5-14.

Thank you for your attention.

Regards,

Darrin R. Munoz
