

Joint Water Research/ Tools and Resources Webinar

New tool for the early detection of algal blooms in U.S. water bodies

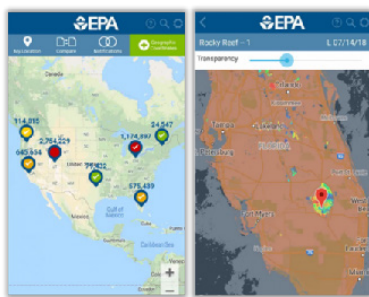

CyAN App: Cyanobacteria Assessment Network Mobile Application

Wednesday, July 24, 2019 from 2:00 to 3:30 pm ET

Registration: <https://attendee.gotowebinar.com/register/6783097638031851777>

A certificate for up to
1.5 training hours will be
offered for attending
this webinar

Cyanobacterial harmful algal blooms (HABs), which can appear in water bodies across the country, are an indicator of poor water quality and can potentially cause serious environmental and human and aquatic health effects. Historically, monitoring these HABs has been labor intensive and limited due to cost, time, and logistical constraints.

EPA developed the CyAN app to help local and state water quality managers make faster and better-informed management decisions related to cyanobacterial blooms. It provides an easy to use, customizable interface for accessing algal bloom satellite data for over 2,000 of the largest lakes and reservoirs in the United States.

The CyAN app is free and available for download on Google Play™. It is designed for use on Android™ devices and is compatible with versions 4.2-8.0 (API levels 18-26). It is currently being developed as a web-based app, which will be compatible with most devices.

1. Overview Presentation and Q&A Session (2:00-2:30 pm ET)

This opening of this webinar will focus on case studies from the states and their beta testing of the CyAN app, and will also provide a general overview of the app, including what it is used for, why and how it was developed, and who it was designed for. The research that led to the development of the app was conducted in collaboration with the National Aeronautics and Space Administration (NASA), National Oceanic and Atmospheric Administration (NOAA), and U.S. Geological Survey (USGS) through the CyAN Project (epa.gov/cyanoproject).

2. Step-by-Step Training and Q&A Session (2:30-3:30 pm ET)

The second half of the webinar will be a step-by-step tutorial on how to use the CyAN app. We will walk through example scenarios and show you how to make fast and efficient initial assessments across water bodies that are roughly one square kilometer or greater. You will learn how to view cyanobacteria concentrations on a national-scale or zoom in to see data for a specific lake or reservoir, how to set queries to determine if blooms exceed your set limits, how to compare multiple water bodies at once, and how to use other functions in the app.

Want to follow along using your Android device during the step-by-step training?

Download the CyAN app today: epa.gov/water-research/CyANapp

Presenters →

Meet the Presenters

Blake A. Schaeffer, Ph.D. | Contact: schaeffer.blake@epa.gov

Physical Scientist

EPA Office of Research and Development

Blake is a physical scientist with EPA's National Exposure Research Laboratory in Durham, North Carolina. His research focus is on the use of satellite remote sensing technology to monitor water quality in coasts, estuaries, and lakes. Blake's interests generally include integrating remote sensing technologies into water quality management frameworks.

Robyn N. Conmy, Ph.D. | Contact: conmy.robyn@epa.gov

Research Ecologist

EPA Office of Research and Development

Robyn is a research ecologist with EPA's National Risk Management Research Laboratory in Cincinnati, Ohio. Her research is dedicated to characterizing optical properties of organic matter in water bodies and discerning their impact to water quality conditions. Robyn's research interests include carbon biogeochemical cycling, optical tracking tools (in-situ and satellite remote sensing), landscape-watershed interactions, crude oil fate and transport, light attenuation in water, and surface-groundwater interactions.

John M. Johnston, Ph.D. | Contact: johnston.johnM@epa.gov

Research Ecologist

EPA Office of Research and Development

John is a supervisory research ecologist with EPA's National Exposure Research Laboratory in Athens, Georgia. His research focus is on water quality monitoring and modeling to forecast ecosystem services and their influence on human health. John's interests include life cycle impact assessment, remote sensing, spatial modeling, and sustainability analysis.
