

# RNG Interconnect Guideline for New York

*A Process for “Getting to Yes”*

Melissa Mauro  
National Grid

# About NGA

- ▶ Non-profit trade association
- ▶ Local gas utilities (LDCs) serving New England, New York, New Jersey and Pennsylvania
- ▶ Several interstate pipeline companies
- ▶ LNG and CNG suppliers
- ▶ Over 400 “associate member” companies, from industry suppliers and contractors to electric grid operators
- ▶ [www.northeastgas.org](http://www.northeastgas.org)

# Can We *Reasonably & Rationally* Meet The Challenges of The Second “Great Conversion”

A purge burner igniting manufactured gas being replaced in a main by natural gas during the 'great conversion' in 1952

- **Supply Mix Is Changing.....**
- **Renewable Gas is a *reality and an important part of the nations supply future***
- **Clean-up Technology has evolved**

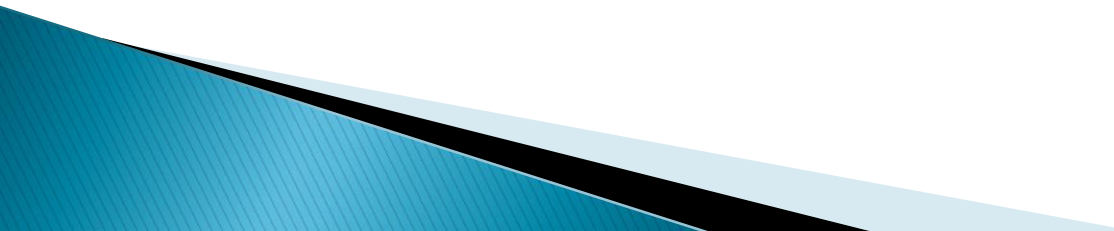

# Guideline Development Process

- ▶ Kickoff Discussion – 09/29/2016
- ▶ Interim Report Review – NYS Utilities 11/29/2016
- ▶ Draft Guide Review – NYS Utilities 04/10/2017
- ▶ Final Guide Review & Revision– 09/22/2017
- ▶ Discussion with NYSDPS, NYSERDA – 01/24/ 2018
- ▶ Peer Review with RNC & ABC – 06/2018
- ▶ Document Release – 9/16/19

# Policy Collides a Bit with Science....

- ▶ RNG is already accepted and used in New York and in the US.
  - ▶ For example, introduction of RNG directly into a gas distribution system has been successfully practiced for over 30 years from the Staten Island, NY landfill 4–7 MMSCF/Day recovered and processed followed by direct injection into the local distribution system.
  - ▶ Project developers are in discussion with gas distributors throughout NE and the northeast but the processes, requirements, and agreements are not uniform, resulting in commercial and technical uncertainty for both parties.
  - ▶ A consistent approach will bring certainty for all parties involved in negotiations with regard to safety, reliability, continuity, and interchangeability.
- 

# What, Why How Approach

- ▶ What are LDC concerns ?
- ▶ Why are LDC's concerned ?
- ▶ How can we address these concerns ?

# The What ?

- ▶ HHV/SG
- ▶ Total Inerts
- ▶ Moisture
- ▶ Oxygen
- ▶ Sulfur Compounds / Total Sulfur
- ▶ Trace Constituents
- ▶ Supply Reliability

# The Why ?

- ▶ **HHV/SG** – Interchangeability, Therm Billing
- ▶ **Total Inerts** – Interchangeability, Integrity
- ▶ **Moisture** – System Integrity
- ▶ **Oxygen** – System Integrity, Interchangeability
- ▶ **Sulfur Compounds** – System Integrity, Safety
- ▶ **Trace Constituents** – End Use, Safety
- ▶ **Supply Reliability** – gas system supply balancing

# Constituents of Concern Summary

- ▶ Potential COCs that may be found in raw gas from specific feedstocks for RNG production – focus analysis on reasonable COC’s

Parameter	Landfill	AD of Agricultural and Clean Organics,	WWTP AD	AD of Source/Facility Separated Organics	Gasifier Syngas
Water Content					
Sulfur, including Hydrogen Sulfide					
Hydrogen					
Carbon dioxide					
Nitrogen					
Oxygen					
Ammonia					
Biologicals					
Mercury					
Volatile metals					
Siloxanes					
Volatile Organic Compounds					
Semi-volatile Organic Compounds					
Halocarbons					
Aldehydes and Ketones					
Polychlorinated biphenyls (PCBs)(1)					
Pesticides (1)					

(1) Unless reasonably suspected

# The How.....

- ✓ Establish trace constituent product equivalency
- ✓ Explore opportunities & common ground
- ✓ Willingness to understand each others concerns & work towards solutions
- ✓ Finding ways to say “yes” rather than imposing overly restrictive requirements based on operational uncertainty

# RNG Interchangeability Implementation Process

**1**  
Understand Historical Supply

- Work with Pipelines to establish system adjustment gas

**2**  
Understand "Zone of Influence"

- Work with pipeline to determine optimum injection point
- Establish reasonable supply compositions
- Pipeline to model influence on system including therm zones

**3**  
Identify "Potential Sensitive Receptors"

- LDC's catalog potential sensitive customer equipment

**4**  
Assessment

- Assess sensitive equipment
- Establish extent of retrofits
- Negotiate fixes

**5**  
Supply Agreement

- Establish interchangeability GSA parameters
- Establish most economical & balanced retrofit strategy if necessary

# How to Achieve Success.....

- ✓ Don't rely on published tariff values alone, gas within distribution systems may be historically different than broad ranges in pipeline tariffs
- ✓ Work with Utilities to understand chemical properties of gas in the area of anticipated injection (adjustment gas).
- ✓ Work with Utilities to balance processing requirements and potential opportunities for contractual blending to meet HHV requirements.
- ✓ Share as much information as possible to provide operational certainty that the processed gas stream is similar to pipeline gas flowing in the area of injection.

# How to Achieve Success.....

- ✓ Optimize start-up and operational monitoring protocols.
- ✓ Develop “surrogate” monitoring parameters as process indicators that drive the need for more exotic testing if necessary.
- ✓ Leverage application of similar processes in similar situations – don’t reinvent the wheel!
- ✓ Establish mutually agreeable testing and monitoring parameters, limits, test methods and procedures to deal with anomalies.

# The Guideline Combines *Good Science & Common Sense.....*
