1.0 EXECUTIVE SUMMARY

The Central Metal site is located at 8201 Santa Fe Ave., Huntington Park, Los Angeles County, California. The approximately 11-acre site, which was formerly identified by the United States Environmental Protection Agency (EPA) as “Damille Metal Svc,” comprises nine parcels and is located within an industrial corridor bound to the east and west by residential neighborhoods, specifically the unincorporated communities of Walnut Park to the east and Florence-Firestone (also known as Florence-Graham) to the west.

Industrial operations have been conducted at the site since approximately the late 1920s. Prior to the mid-1980s, the site was used for the manufacturing of corrugated metal tanks. Since approximately 1989, the site has been used for scrap metal recycling; initially by Damille Metal Supply, Inc. (DMS) through approximately 2001 followed by Central Metal, Inc (CMI) through approximately July 2016. The western and southeastern portions of the site, which were formerly occupied by railroad freight lines, were acquired by CMI in approximately 2004. Additional tenants associated with metal-processing industries are reported to have occupied by the property concurrently with DMS. Scrap metal recycling activities at the facility has been prohibited since approximately July 2016 per a Conditional Use Permit issued by the Los Angeles County Planning Department.

Scrap metal recycling operations generally included the sorting and cleaning of purchased scrap metal followed by the cutting and/or shredding of the scrap metal into compact sizes for domestic and/or international shipment. During operations, various scrap metal and debris were stored across the exterior portions of the site in large, uncontained, and uncovered “waste piles.” A waste pile located on the north-central portion of the site in 2005 is estimated to have covered more than 23,000 square feet (ft^2) and been several stories in height.

In 2016, the site was identified by EPA as a potential hazardous waste site and entered into the Superfund Enterprise Management System (SEMS). EPA completed a Preliminary Assessment (PA) for the site in 2018. Upon review of the PA, EPA determined that further investigation was warranted and initiated a Site Inspection (SI) to determine if the site was a source for area-wide volatile organic compound (VOC) and/or metals groundwater contamination. As part of the ongoing SI, EPA conducted an on-site soil vapor survey and limited soil sampling event in April 2019 (Stage 1) followed by a more comprehensive soil and groundwater sampling event in June 2019 (Stage 2).

During the soil vapor survey completed during the Stage 1 efforts, several VOCs were identified at concentrations slightly above published regulatory benchmarks. However, during the Stage 2 soil sampling no VOCs were found at concentrations either exceeding or approaching their respective Regional Screening Levels (RSLs). Furthermore, groundwater beneath the site was found to have only minimal VOC concentrations. The data suggests that the site is not a likely source of area-wide VOC groundwater contamination.

During the Stage 1 and Stage 2 sampling efforts, hazardous metals; specifically arsenic, cobalt, and lead; were identified at concentrations slightly exceeding their respective RSLs. Based upon

the relative concentrations of total metals in groundwater, as well as the estimated groundwater flow direction, the data suggests that the site is not a significantly impacting area groundwater.

During the course of the SI, EPA became aware that in December 2018 a waste pile on the facility had been containerized into 21 large roll-off bins and sampled under the direction of the local Certified Unified Program Agency (CUPA). The roll-off bins, which were stored within the large on-site manufacturing building (i.e., Warehouse), were present during EPA's Stage 1 (April 2019) and Stage 2 (June 2019) sampling events. Placards attached to the bins, as well as analytical data subsequently provided to EPA by the CUPA, indicated that the material was classified as a hazardous waste based on the identified concentrations of arsenic, lead, and/or cadmium. Moreover, an investigation conducted in 2011 by the California Department of Toxic Substances Control (DTSC) also identified high levels of hazardous heavy metals in waste piles on the site. Based on concerns that historical on-site waste piles contained similar concentrations of hazardous metals, EPA proceeded to complete a comprehensive aerial photo analysis to assess the controls and volumes of historical waste piles as well as an analysis of the prevailing wind directions. Based on the results of this analysis, the site's proximity to a large down-wind residential population, and concerns raised to EPA by nearby residents, EPA concluded that an additional sampling effort was necessary to determine if hazardous metals originating from historical on-site waste piles had migrated through the air and been deposited onto nearby residential properties. EPA is currently in the process of planning and executing this third stage (Stage 3) of the SI.

2.0 INTRODUCTION

Under the authority of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), Weston Solutions, Inc. (WESTON®) has been tasked to conduct a Site Inspection (SI) of the Central Metal site in Huntington Park, Los Angeles County, California.

The Central Metal site (formerly identified as Damille Metal SVC) was identified as a potential hazardous waste site and entered into the Superfund Enterprise Management System (SEMS) on March 11, 2016 (CAN000903324). A Preliminary Assessment (PA) was completed for the United States Environmental Protection Agency (EPA) by WESTON on January 31, 2018. The purpose of a PA is to review existing information on a site with potential releases of a hazardous substance and its environs to assess the threats, if any, posed to public health, welfare, or the environment and to determine if further investigation under CERCLA is warranted (EPA, 2019; WESTON, 2017).

After reviewing the 2018 PA, EPA determined that further investigation of the Central Metal site would be necessary to more completely evaluate the site using EPA Hazard Ranking System (HRS) criteria. The HRS assesses the relative threat associated with actual or potential releases of hazardous substances at the site. The HRS has been adopted by EPA to help set priorities for further evaluation and eventual remedial action at hazardous waste sites. The HRS is the primary method of determining a site's eligibility for placement on the National Priorities List (NPL). The NPL identifies sites at which EPA may conduct remedial response actions (EPA, 2018).

This Interim Sampling Report (ISR) serves as an intermediary deliverable of the Central Metal SI report and pertains to only the soil vapor sampling and limited soil matrix sampling activities that were conducted as the ‘Stage 1’ portion of the project and to the soil matrix and groundwater sampling activities that were conducted as the ‘Stage 2’ portion of the project.

EPA is currently in the process of planning and executing a third stage (Stage 3) of the SI. The ‘Stage 3’ portion of the investigation will focus on the collection of surface and shallow subsurface soil samples in residential neighborhoods adjacent to the Central Metal site for the purpose of evaluating the potential that airborne deposition of hazardous materials originating from former on-site uncontrolled waste piles has occurred. A complete SI report, which will include a more detailed discussion of the ‘Stage 1’ and ‘Stage 2’ findings as well as a full reporting of the ‘Stage 3’ findings, will be produced in spring 2021.

More information about the Superfund program is available on the EPA website at <https://www.epa.gov/superfund>.

EPA determined that a Site Inspection (SI) was needed at the Central Metal site because of the following apparent problems:

- Between the late 1920s and the mid-1980s, the site was operated as a corrugated metal tank manufacturing facility. Since approximately 1989, the site has been operating as a metal supply and industrial scrap metal recycling facility. Between 1999 and 2001,

approximately 1.79 tons of tetrachloroethylene (PCE) were reported as being manifested from the site (DTSC, 2016; WEECO, 2014; WESTON, 2017).

- Inspections conducted at the site by various state and local regulatory agencies resulted in the issuance of numerous Notices of Violation (NOVs) as a result of poor housekeeping, improper hazardous waste storage, and improper hazardous waste disposal (DTSC, 2012; DTSC, 2016; WESTON, 2017).
- The site is situated upgradient with respect to the regional groundwater flow from several municipal supply wells that have been identified with elevated concentrations of volatile organic compounds (VOCs), including PCE and trichloroethylene (TCE). The nearest active well to the site is Nadeau Well 03, which is located approximately 0.5 mile northwest and has exhibited PCE and TCE concentration up to 1.4 micrograms per liter ($\mu\text{g}/\text{L}$) and 6.0 $\mu\text{g}/\text{L}$, respectively. The federal Maximum Contaminant Level (MCL) for both PCE and TCE is 5.0 $\mu\text{g}/\text{L}$ (RWQCB, 2019).

3.0 SITE LOCATION, DESCRIPTION, AND OPERATIONAL HISTORY

(See Figures 1, 2, & 3)

The Central Metal site is located at 8201 Santa Fe Ave., Huntington Park, California. Additional addresses associated with the site property include 8240 Marbrisa Ave. The geographic coordinates for the site are 33° 57' 47.31" North latitude and 118° 13' 52.07" West longitude.

The site occupies approximately 11.1 acres in a mixed industrial and residential area of southern Los Angeles County. The site is bordered to the north across Short Street by industrial businesses; to the west across the subgrade railroad tracks of the Alameda Corridor by industrial businesses, with the single-family residences of the Florence-Firestone (also known as Florence-Graham) community beyond; to the south by an industrial recycling business; and to the east across Santa Fe Avenue by commercial businesses and the single-family residences of the Walnut Park community. The southeastern portion of the site is bordered directly to the northeast by single-family residences (Google, 2019; LACA, 2019).

For the purposes of this SI, two distinct potential source zones were designated within the site boundaries. These zones were based on the identified historical operations within each area and are henceforth referred to as the Former Tank Manufacturing Area and the Former Railroad Area. The Former Tank Manufacturing Area occupies approximately 4.0 acres at the northeastern portion of the site and the Former Railroad Area occupies approximately 7.1 acres at the southwestern portion of the site (Google, 2019; LACA, 2019).

The site comprises nine Los Angeles County Assessor parcels. Five of these parcels compose the Former Tank Manufacturing Area and are identified by the following Assessor Parcel Numbers (APNs):

- 6202-036-009
- 6202-037-004
- 6202-037-006
- 6202-037-009
- 6202-037-010

The remaining four parcels compose the Former Railroad Area and are identified by the following APNs (Google, 2019; LACA, 2019):

- 6202-036-010
- 6202-036-011
- 6202-036-012
- 6202-036-013

The site is currently occupied by three primary structures, including the following (Google, 2019; LACA, 2019; WEECO, 2014; WESTON, 2017):

- An approximately 53,000 square foot (ft^2) manufacturing and warehouse building (i.e., Warehouse) at the east-central portion of the site. This building currently includes a maintenance shop and hazardous waste storage area (HWSA) at the southern portion, and an aboveground storage tank (AST) area at the northern portion. The building, which was likely constructed in multiple stages, was reportedly constructed between 1928 and 1937 although it appears to be present in aerial imagery dated from 1927.
- An approximately 2,500 ft^2 office building at the northeast corner of the site (i.e., Main Office). The construction date of this building is not known; however, the building appears to be present in aerial imagery dated from 1927.
- An approximately 500 ft^2 office building at the northern portion of the site, adjacent to the subgrade scale (i.e., Scale House). The construction date of this building is not known.

In addition, a stormwater treatment area is located in the southwestern corner of the site and various pieces of heavy equipment (e.g., metal sorters, metal crushers, excavators) are located throughout the exterior portions of the site. Historically, the Warehouse included an additional approximately 62,000 ft^2 area to the west of the current structure. This portion of the building was reportedly demolished in 1988. In addition, railroad tracks historically bisected the property from southeast to northwest. The railroad tracks appear to have been abandoned in the late 1990s, likely concurrent with the construction of the adjacent Alameda Corridor, and were removed in the early 2000s. Prior to the installation of the existing stormwater treatment system in approximately 2008, a historical stormwater treatment system was located at the north-central portion of the site (Google, 2019; LACA, 2019; WEECO, 2014).

Based on aerial imagery, numerous large scrap metal waste and debris piles were located on the property between at least 2003 and 2018. These piles, which were generally confined to the Former Tank Manufacturing Area of the site from 2003-2007 and from 2012-2018, appeared to encompass areas up to a 0.5 acre and to be several stories in height. The specific materials that comprised the various piles is not known; however, it is estimated that they were primarily a combination of metal and debris generated during metal recycling operations (Google, 2019).

The site is entirely fenced and the surface of the site is entirely covered in pavement or buildings. However, prior to approximately 2007, the western portion of the site was unpaved. During investigative efforts conducted by the EPA in April and June 2019, the concrete slab was found to vary from approximately 18 to 48 inches (Google, 2019).

The Former Tank Manufacturing Area of the site was operated, and presumably owned, by the National Tank & Manufacturing Company (National Tank) from approximately the late 1920s through the mid-1980s. By 1989, this portion of the site was owned by David Miller and occupied by Damille Metal Supply, Inc. (DMS). During the 1990s, additional tenants or companies may have also occupied the site, including L&S Metals; MCS, Inc.; and All Star Metals, Inc. In

addition, during an unknown period, the site was historically occupied by Ace Foundry LTD. The relationship, if any, between these companies and DMS is not known. In approximately 2002, the Former Tank Manufacturing Area of the site was purchased by the current owner, Jong Uk Byun, doing business as Central Metal, Inc (CMI). In approximately 2004, CMI also purchased the Former Railroad Area of the site. No additional historical ownership information is known; however, it is assumed that the Former Railroad Area was historically owned by a major rail company (WEECO, 2014; WESTON, 2017).

National Tank & Manufacturing Company (National Tank)

National Tank was historically a manufacturer of corrugated metal water and oil tanks. The specific tank manufacturing operations associated with the site are not known; however, the majority of operations likely occurred within the existing Warehouse and the former westward extension of that building. It is unlikely that any National Tank operations were conducted on the Former Railroad area of the site. Ace Foundry likely also operated on the western portion of the Former Tank Manufacturing Area during National Tank operations; however, specific information regarding foundry operations, hazardous substances, and operational time periods is not known (WEECO, 2014; WESTON, 2017).

Damille Metal Supply, Inc. (DMS)

DMS operated on the site as an industrial scrap metal recycler from approximately 1989 through the late 1990s or early 2000s. Operations included buying and selling scrap metal including at least aluminum, steel, copper, and titanium. Scrap metals were sorted on site, sheared or cut, and shipped off site. Hazardous waste manifests indicate that between 1999 and 2001, approximately 1.79 tons of PCE waste (listed as an aqueous solution with organic residues) were generated at the site. The origin of this organic waste is not known. No additional information is known regarding specific activities or hazardous substances associated with DMS operations. It is presumed that one or more of the additional businesses historically identified at the site (L&M Metals, MCS, All Star Metals) conducted similar scrap metal operations. Ace Foundry likely also operated on the western portion of the Former Tank Manufacturing Area during DMS operations; however, specific information regarding foundry operations, hazardous substances, and operational time periods is not known (DTSC, 2016; WEECO, 2014; WESTON, 2017).

Central Metal, Inc. (CMI)

CMI also operated on site as an industrial metal supply and scrap metal recycling facility from approximately 2001 through July 2016. On-site activities included purchasing scrap metals from various industries, primarily fabrication, manufacturing, and construction companies. Scrap metals were then sorted, cleaned, and cut or shredded into compact sizes for domestic and/or international shipment. Recycled metals included, but were not limited to, steel, aluminum, copper, brass, and stainless steel. The facility also received, stored, and resold electronic waste such as computer monitors, desktop towers, batteries, and other computer parts (DTSC, 2016; WESTON, 2017).

During operations, various metal scrap and debris were stored across the exterior portions of the site in large piles. These metal and debris piles, which were generally uncontained and uncovered,

were identified within the Former Tank Manufacturing Area from approximately 2003 through 2018 and within the Former Railroad Area from approximately 2007 through 2011. The piles ranged considerably in size; however, a distinct pile located on the north-central portion of the site in 2005 is estimated based on aerial imagery to have covered more than 23,000 ft² (DTSC, 2016; Google, 2019).

Spent automobile batteries, hydraulic oil, motor oil, antifreeze, gasoline, and diesel fuel were stored on site. Used oil was stored in an on-site AST. Stormwater runoff from the site was historically filtered through a single-chamber clarifier and then pumped through two 1,000-gallon ASTs before being discharged to the municipal stormwater system on Short Street on the northern side of the property. Since approximately 2008, stormwater runoff has been flowing first to an eight-stage filtration system located at the southwestern corner of the site, then has been discharged to Alameda Street. Scrap metal recycling activities at the facility has been prohibited since approximately July 2016 per a Conditional Use Permit issued by the Los Angeles County Planning Department (DTSC, 2012; WEECO, 2014; WESTON, 2017).

Unaltered petroleum products, as well as any substances that are purposefully added to the indigenous petroleum product during the refining process, are excluded from consideration under CERCLA.

4.0 STAGE 1 INVESTIGATIVE EFFORTS

(See Tables 1 & 2; Figures 4, 6 & 7; Attachments A & B)

In April 2019, WESTON, on behalf of EPA, conducted the Stage 1 SI sampling event at the Central Metal site. The Stage 1 event included soil vapor and soil matrix sampling at 20 non-biased sampling locations located across the site (SV-1 through SV-20), predominantly within the Former Tank Manufacturing Area. The primary objective of the Stage 1 portion of the investigation was to provide information on the relative concentrations of metals and VOCs across the site to assist in the selection of subsequent on-site soil matrix and groundwater sampling (i.e., Stage 2).

Between April 8 and April 11, 2019, 37 soil vapor probes were installed across the site, which were subsequently analyzed using a WESTON-subcontracted mobile laboratory. The probes were installed at two distinct depths (approximately 5 feet and 15 feet below ground surface [ft-bgs]) using direct-push (DP) technology. In addition, 38 soil matrix samples (not including duplicate or Quality Assurance [QA] samples) were collected during the investigation. Soil samples were collected from depths of approximately 2 ft-bgs and 10 ft-bgs at each location and submitted to a fixed laboratory for metals analyses. Due to refusal issues, a soil vapor sample could not be collected from either of the targeted depths at SV-6 or from the 15-foot targeted depth at SV-13, and soil matrix samples could not be collected from the 10-foot targeted depths at either location. A more comprehensive discussion of the Stage 1 sampling activities (including, but not limited to, field duplicates, lab QA samples, data qualifiers, blanks) will be included within the final SI report.

4.1 STAGE 1 SOIL VAPOR RESULTS for VOCs

(See Tbl. 1; Fig. 6; Att. A)

Numerous VOC analytes were identified at detectable concentrations during the survey. Although soil vapor benchmarks are not applicable within the HRS, for the purposes of this ISR, the soil vapor data collected during the investigation was compared to the November 2019 EPA Resident and Commercial Sub-slab and Near-source Soil Gas Vapor Intrusion Screening Levels (VISLs). In addition, the April 2019 California Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Note 3 –Screening Levels (DTSC-SLs) for Residential and Commercial/Industrial Air (modified with an attenuation factor of 0.05 applied) are presented for reference. Three analytes, bromodichloromethane (BDCM), carbon tetrachloride, and PCE, exceeded their respective Resident VISLs with carbon tetrachloride and PCE also slightly exceeding their respective Commercial VISLs. In addition, PCE also exceeded its Residential DTSC-SL, which is significantly lower than its Resident VISL. TCE was not detected above reporting limits during the survey.

The maximum BDCM concentration of 13 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) was identified in the 6-ft-bgs sample collected from SV-20 (southern portion of the Former Railroad Area). The Resident and Commercial VISLs for BDCM are $3.0 \mu\text{g}/\text{m}^3$ and $11 \mu\text{g}/\text{m}^3$, respectively. The Residential and Commercial/Industrial DTSC-SLs (based on the noncancer endpoint) for BDCM are $1,660 \mu\text{g}/\text{m}^3$ and $7,000 \mu\text{g}/\text{m}^3$, respectively.

The maximum carbon tetrachloride concentration of $18 \mu\text{g}/\text{m}^3$ was identified in the 6-ft-bgs sample collected from SV-10 (northwestern portion of the Warehouse). The Resident and Commercial

VISLs for carbon tetrachloride are 16 µg/m³ and 68 µg/m³, respectively. The Residential and Commercial/Industrial DTSC-SLs (based on the noncancer endpoint) for carbon tetrachloride are 840 µg/m³ and 3,600 µg/m³, respectively.

The maximum PCE concentration of 2,530 µg/m³ was identified in the 6.5-ft-bgs sample collected from SV-14 (central portion of the Warehouse). The 16-ft-bgs sample from this location exhibited a PCE concentration of 2,190 µg/m³. PCE was identified in 34 of the remaining 35 samples with concentrations that ranged from 8.0 to 339 µg/m³. The Resident and Commercial VISLs for PCE are 360 µg/m³ and 1,570 µg/m³, respectively. The Residential and Commercial/Industrial DTSC-SLs (based on the cancer endpoint) for PCE are 9.2 µg/m³ and 40 µg/m³, respectively.

4.2 STAGE 1 SOIL SAMPLING RESULTS for METALS *(See Tbl. 2; Fig. 7; Att. B)*

Numerous metal analytes were identified at detectable concentrations during the Stage 1 soil sampling event. For purposes of discussion, these results were compared to the November 2019 EPA Residential and Industrial Regional Screening Levels (RSLs); however, RSLs are not appropriate for use as benchmarks under the HRS. In addition, the April 2019 DTSC-SLs for Residential and Commercial/Industrial Soil are presented for reference. Arsenic, cobalt, and lead were identified in samples at concentrations exceeding one or more of their respective RSLs and/or DTSC-SLs. Elevated concentrations of manganese were also identified, although not at a level exceeding its Residential RSL and there are no published DTSC-SLs for manganese. There are also no published RSLs or DTSC-SLs for total (i.e., unspated) chromium. Site-specific background concentrations (including of both naturally-occurring and anthropogenic origins) have not yet been established for the project.

The maximum arsenic concentration of 14 milligrams per kilogram (mg/kg) was identified in the 2-ft-bgs sample collected from SV-13 (located immediately west of the central portion of the Warehouse). No deep sample was collected from SV-13 due to early refusal. Eleven of the remaining 37 samples also exhibited arsenic concentrations that exceeded the Industrial RSL. The Residential and Industrial RSLs for arsenic are 0.68 mg/kg and 3.0 mg/kg, respectively. The Residential and Commercial/Industrial DTSC-SLs for arsenic are 0.11 mg/kg and 0.36 mg/kg, respectively. In 2005, DTSC published the results of a study evaluating background concentrations of arsenic found at various school properties within the Los Angeles Unified School District (LAUSD). This study, which included the statistical analysis of data collected from approximately 600 samples, calculated a regional background arsenic concentration of 6.0 mg/kg, notably exceeding both the Industrial RSL and the Commercial/Industrial DTSC-SL (DTSC, 2005).

The maximum cobalt concentration of 152 mg/kg was identified in the 2-ft-bgs sample collected from SV-12 (located approximately 75 feet west of the central portion of the Warehouse). The Residential and Industrial RSLs for cobalt are 23 mg/kg and 350 mg/kg, respectively. Two of the remaining 37 samples also exhibited cobalt concentrations that exceeded the Residential RSL. There are no published DTSC-SLs for cobalt.

The maximum lead concentration of 338 mg/kg was identified in the 2-ft-bgs sample collected from SV-6 (located approximately 75 feet west of the northwest corner of the Warehouse). No

deep sample was collected from SV-6 due to early refusal. The Residential and Industrial RSLs for lead are 400 mg/kg and 800 mg/kg, respectively. The Residential and Commercial/Industrial DTSC-SLs for lead (based on the noncancer endpoint) are 80 mg/kg and 320 mg/kg, respectively.

The maximum manganese concentration of 825 mg/kg was identified in the 2-ft-bgs sample collected from SV-13 (located immediately west of the central portion of the Warehouse). No deep sample was collected from SV-13 due to early refusal. The 2-ft-bgs sample collected from SV-6 also exhibited a relatively high manganese concentration of 801 mg/kg. The Residential and Industrial RSLs for manganese are 1,800 mg/kg and 26,000 mg/kg, respectively. There are no published DTSC-SLs for manganese.

The maximum chromium concentration of 57 mg/kg was identified in the 2-ft-bgs sample collected from SV-6 (located approximately 75 feet west of the northwest corner of the Warehouse building). No deep sample was collected from SV-6 because of early refusal. There are no published RSLs or DTSC-SLs for total (i.e., unspediated) chromium.

5.0 STAGE 2 INVESTIGATIVE EFFORTS

(See Table 3; Figures 5, 8 & 9; Attachments C & D)

In June 2019, WESTON, on behalf of EPA, conducted the Stage 2 SI sampling event at the Central Metal site. The Stage 2 event included both soil and groundwater sampling at selectively-biased sampling locations located across the site with samples analyzed for VOCs and metals. The primary objective of the Stage 2 portion of the investigation was to collect analytical data from site soils and groundwater to determine if an on-site hazardous substance source existed at the site and, if present, if it was a potential source of area-wide groundwater contamination.

Between June 17 and June 20, 2019, ten soil borings were advanced using DP technology to a maximum depth of 17 ft-bgs, and five groundwater borings were advanced using Cone Penetration Testing (CPT) technology to a maximum depth of 101 ft-bgs. Within each soil boring, samples were collected from four distinct depths of approximately 2, 5, 10, and 15 ft-bgs. A total of 40 soil samples (not included duplicate or QA samples) were submitted for fixed-laboratory VOC and metals analysis. Within each groundwater boring, a single groundwater sample was collected from the top of the underlying Gaspur aquifer. No perched or semi-perched water was identified between ground surface and the top of the aquifer. Five groundwater samples (not included duplicate or QA samples) were submitted for fixed-laboratory VOC and total (i.e., not dissolved) metals analysis. A more comprehensive discussion of the Stage 2 sampling activities (including, but not limited to, field duplicates, lab QA samples, data qualifiers, blanks) will be included within the final SI report.

5.1 STAGE 2 SAMPLING RESULTS for VOCs

(See Fig. 8; Att. C)

Five VOC analytes were identified at detectable concentrations in soil samples during the Stage 2 sampling event. For purposes of discussion, these results were compared to the November 2019 EPA Residential and Industrial RSLs for soil and the April 2019 California State Residential and Commercial/Industrial DTSC-SLs for soil; however, neither RSLs nor DTSC-SLs are appropriate for use as benchmarks under the HRS. Of the five identified VOC analytes, which included 2-butanone (also known as methyl ethyl ketone [MEK]), acetone, methylene chloride (also known as dichloromethane), m,p-xylene, and PCE, none exhibited concentrations either exceeding or approaching either their respective Residential RSLs or DTSC-SLs. There are no published DTSC-SLs for 2-butanone, acetone, or m,p-xylene. It should be noted that 2-butanone, acetone, and methylene chloride are all common laboratory contaminants. PCE was only identified in a single sample, which was collected from 2 ft-bgs at DP-6 (central portion of Warehouse and adjacent to the maximum PCE result identified during the Stage 1 Soil Vapor Survey) and was reported at a concentration of 2.2 micrograms per kilogram ($\mu\text{g}/\text{kg}$). The Residential RSL for PCE is 24,000 $\mu\text{g}/\text{kg}$ and the Residential DTSC-SL for PCE is 590 $\mu\text{g}/\text{kg}$.

Eight VOC analytes were identified at detectable concentrations in groundwater samples during the Stage 2 sampling event. For purposes of discussion, these results were compared to the EPA MCLs; although MCLs are not appropriate for use as benchmarks to establish a hazardous substance release under the HRS. Of the eight identified VOC analytes, which included 2-butanone (also known as MEK), acetone, benzene, carbon disulfide, m,p-xylene, toluene, trans-1,2-

dichloroethylene (trans-1,2-DCE) and TCE, only benzene, toluene, trans-1,2-DCE, and TCE have published MCLs and none of the exhibited concentrations of these analytes either exceeded or approached their respective MCLs. Trans-1,2-DCE was identified in the samples collected from CPT-2 (0.12 µg/L) and CPT-4 (0.15 µg/L). TCE was identified in only a single sample, which was collected from CPT-2, at a concentration of 0.21 µg/L. The MCLs for trans-1,2-DCE and TCE are 100 µg/L and 5 µg/L, respectively. CPT-2 was advanced at the west-central portion of the site and CPT-4 was advanced at the southeastern portion of the site. This data does not support a release of VOCs from the site to groundwater because the shallow groundwater beneath the site does not appear to have significant VOC impacts.

5.2 STAGE 2 SAMPLING RESULTS for METALS

(See *Tbl. 3; Fig. 9; Att. D*)

Numerous metal analytes were identified at detectable concentrations in soil samples during the Stage 2 sampling event. For purposes of discussion, these results were compared to the November 2019 EPA Residential and Industrial RSLs; however, RSLs are not appropriate for use as benchmarks under the HRS. In addition, the April 2019 DTSC-SLs for Residential and Commercial/Industrial Soil are presented for reference. Arsenic and lead were both identified in samples at concentrations exceeding one or more of their respective RSLs and/or DTSC-SLs. Elevated concentrations of cobalt and manganese were also identified, although not at levels exceeding their respective RSLs and there are no DTSC-SLs for either cobalt or manganese. There are also no published RSLs or DTSC-SLs for total (i.e., unspediated) chromium. Site-specific background concentrations (including of both naturally-occurring and anthropogenic origins) have not yet been established for the project.

The maximum arsenic concentration of 14 mg/kg was identified in the 2-ft-bgs sample collected from DP-9 (located at the south-central portion of the Former Railroad Area). Nineteen of the remaining 39 samples also exhibited arsenic concentrations that exceeded the Industrial RSL. The Residential and Industrial RSLs for arsenic are 0.68 mg/kg and 3.0 mg/kg, respectively. The Residential and Commercial/Industrial DTSC-SLs for arsenic are 0.11 mg/kg and 0.36 mg/kg, respectively. In 2005, DTSC published the results of a study evaluating background concentrations of arsenic found at various school properties within LAUSD. This study, which included the statistical analysis of data collected from approximately 600 samples, calculated a regional background arsenic concentration of 6.0 mg/kg, notably exceeding both the Industrial RSL and the Commercial/Industrial DTSC-SL (DTSC, 2005).

The maximum lead concentration of 612 mg/kg was identified in the 2-ft-bgs sample collected from DP-7 (located at the southwestern portion of the Warehouse). Four of the remaining 39 samples also exhibited lead concentrations that exceeded the Residential DTSC-SL but did not exceed either the Residential RSL or the Commercial/Industrial DTSC-SL. All four of these samples were also collected from approximately 2 ft-bgs. The Residential and Industrial RSLs for lead are 400 mg/kg and 800 mg/kg, respectively. The Residential and Commercial/Industrial DTSC-SLs for lead (based on the noncancer endpoint) are 80 mg/kg and 320 mg/kg, respectively.

The maximum cobalt concentration of 22 mg/kg was identified in the 5-ft-bgs sample collected from DP-3 (located approximately 100 feet west of the northwest corner of the Warehouse). The

Residential and Industrial RSLs for cobalt are 23 mg/kg and 350 mg/kg, respectively. There are no published DTSC-SLs for cobalt.

The maximum manganese concentration of 644 mg/kg was identified in the 5-ft-bgs sample collected from DP-8 (located in the north-central portion of the site). The Residential and Industrial RSLs for manganese are 1,800 mg/kg and 26,000 mg/kg, respectively. There are no published DTSC-SLs for manganese.

The maximum chromium concentration of 39 mg/kg was also identified in the 5-ft-bgs sample collected from DP-8. There are no published RSLs or DTSC-SLs for total (i.e., unspediated) chromium.

Numerous metal analytes were identified at detectable concentrations in groundwater samples during the Stage 2 sampling event. As the samples were analyzed for total metals, the results are not comparable to human-health regulatory benchmarks such as EPA or California state MCLs. In general, total metal concentrations were found to be higher in the samples collected from CPT-4 (located at the southeastern corner of the site) and, to a lesser degree, in CPT-2 (located at the west-central portion of the site). Concentrations were generally found to be lower in the samples collected from CPT-5 (located at the southwestern corner of the site) and CPT-1 (located within the central portion of the Warehouse). This data does not support a likely release of hazardous metals from the site to groundwater because shallow groundwater is estimated to be flowing towards the southwest.

6.0 STAGE 3 INVESTIGATIVE EFFORTS

During the course of the SI, EPA became aware that in December 2018 a waste pile on the facility had been containerized into 21 large roll-off bins and sampled under the direction of the local Certified Unified Program Agency (CUPA). The roll-off bins, which were stored within the large on-site manufacturing building (i.e., Warehouse), were present during EPA's Stage 1 (April 2019) and Stage 2 (June 2019) sampling events. Placards attached to the bins, as well as analytical data subsequently provided to EPA by the CUPA, indicated that the material was classified as a hazardous waste based on the identified concentrations of arsenic, lead, and/or cadmium. Moreover, an investigation conducted in 2011 by the California DTSC also identified high levels of hazardous heavy metals in waste piles on the site. Based on concerns that historical on-site waste piles contained similar concentrations of hazardous metals, EPA proceeded to complete a comprehensive aerial photo analysis to assess the controls and volumes of historical waste piles as well as an analysis of the prevailing wind directions. Based on the results of this analysis, the site's proximity to a large down-wind residential population, and concerns raised to EPA by nearby residents, EPA concluded that an additional sampling effort was necessary to determine if hazardous metals originating from historical on-site waste piles had migrated through the air and been deposited onto nearby residential properties. EPA is currently in the process of planning and executing this third stage (Stage 3) of the SI.

Notes:

All values are reported in mg/kg
Bold values indicate results that exceed Residential RSL
Shaded cells indicate results that exceed Industrial RSL
Samples collected in June 2019.
1 = There are no published RSLs for Total Chromium
2 = Noncancer Endpoint

Definitions:

DTSC-SL = California Department of Toxic Substances Control Screening Level (April 2019; HHRA Note 3)
J = The result is an estimated quantity
J+ = The result is an estimated quantity, but the result may be biased high
J- = The result is an estimated quantity, but the result may be biased low
mg/kg = milligram per kilogram
RSL = EPA Regional Screening Level (Nov 2019; THQ = 1.0, Risk = 10⁻⁶)

JONES ENVIRONMENTAL LABORATORY RESULTS

Client:	Weston Solutions, Inc.	Report date:	4/11/2019
Client Address:	5881 Obispo Ave, Unit 101 Long Beach, CA 90805	Jones Ref. No.:	D-1612
Attn:	Brian Reilly	Date Sampled:	4/10/2019
Project Address:	8201 Santa Fe Ave. Huntington Park, CA 90255	Date Received:	4/10/2019
		Date Analyzed:	4/10/2019
		Physical State:	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

A handwritten signature in black ink, appearing to read 'AH', is placed over a horizontal line.

JONES ENVIRONMENTAL LABORATORY RESULTS

Client:	Weston Solutions, Inc.	Report date:	4/15/2019
Client Address:	5881 Obispo Ave, Unit 101 Long Beach, CA 90805	Jones Ref. No.:	D-1613
Attn:	Brian Reilly	Date Sampled:	4/11/2019
Project Address:	8201 Santa Fe Ave. Huntington Park, CA 90255	Date Received:	4/11/2019
		Date Analyzed:	4/11/2019
		Physical State:	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

A handwritten signature in black ink, appearing to read "David Mirakian".

Attachment B:
Stage 1 Metals Laboratory Reports

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From: Kathy O'Brien, Sr. Project Manager *Ko2*
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106218

Date: June 26, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48197
SDG No.:	MYAMD5
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES and ICP-MS
Samples:	14 Soil Samples
Collection Dates:	April 8, 9, and 10, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48197
SDG No.: MYAMD5
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES and ICP-MS
Reviewer: Santiago Lee, ESAT
Date: June 26, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): MYAMJ4 (in SDG MYAMH9).
Equipment Blanks (EB): MYAMH0, MYAMJ0, and MYAMJ1 (in SDG MYAMH9).
Background Samples (BG): None.
Field Duplicates: MYAME9/MYAMH5 (in SDG MYAMG1).

CLP PO Action

The laboratory analyzed the matrix spike for copper with an added concentration of 26.7 mg/kg instead of 50.0 mg/kg as stated in Table 2 of the statement of work (SOW). See CLP SOW ISM02.4, Exhibit D, ICP-AES Pages D-24, Section 12.3.3.2 and D-31, Table 2.

Sampling Issues

None.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Copper was analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES). Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Mass Spectroscopy (ICP-MS).

Chain of custody records (COCs) indicate that the samples were collected on April 8, 9, and 10, 2019 and shipped on April 12, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping. The laboratory documentation indicates that they were received on ice and at a temperature of 6.0°C.

Sample MYAME9 was analyzed on April 22, 2019 for 15 metals. Initially, Forms 2-IN (Initial and Continuing Calibration Verification) and 3-IN (Blanks) had information for only seven metals. The laboratory submitted corrected Forms 2-IN and 3-IN and electronic data deliverable (EDD) upon request, on May 22, 2019.

Samples listed below did not meet the internal standard QC limit of 60-125% relative intensity (RI) in the initial analysis. The samples were diluted and reanalyzed as required by the statement of work (SOW). Results for beryllium, cobalt, nickel, and zinc in these samples are reported from the 2-fold dilution because the RIs are within the QC limit.

Sample	Internal Standard	% Relative Intensity from Undiluted	% Relative Intensity from 2-Fold Dilution
MYAMD5	Scandium-45	135	108
MYAMD7	Scandium-45	138	110
MYAMD9	Scandium-45	133	104
MYAME1	Scandium-45	133	105
MYAME3	Scandium-45	136	105
MYAME7	Scandium-45	131	100

Preparation logbook pages for some solutions are missing from the data package. Data quality is not likely to be affected; all other standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	Yes	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	Yes	
7. ICP Interference Check Sample (ICS)	Yes	
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	No	C
10. Spike Sample Analysis	Yes	
11. ICP Serial Dilution	No	D
12. ICP-MS Internal Standards	Yes	
13. Analyte Quantitation and CRQL	Yes	A
14. Field Duplicate Sample Analysis	No	E
15. Overall Assessment of Data	Yes	

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.

- Antimony in samples MYAMD5, MYAMD7, MYAMD9, MYAME1, MYAME3, MYAME7, and MYAME9.
- Thallium in all samples and preparation blank PBS01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Antimony	ICB01/CCB04	0.29/0.10
	ICB01	0.35
Thallium	ICB01/CCB04/CCB05	0.056/0.51/0.54
	ICB01/CCB03/CCB04	0.080/0.080/0.080

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- C. The following results are estimated and flagged “J” because a laboratory duplicate result is outside method QC limit.

- Nickel in all samples.

Results for laboratory duplicates MYAME4D do not meet the 20% relative percent difference (RPD) criterion as presented below.

Analyte	RPD, %
Nickel	23

This result may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results for nickel are considered quantitatively uncertain.

- D. The following results are estimated and flagged “J” because serial dilution results are outside method QC limit.

- Copper, nickel, and zinc in all samples.

Percent differences for serial dilution analysis of MYAME4L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Copper	21
Nickel	34
Zinc	119

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results for analytes listed above are considered quantitatively uncertain.

Chemical and physical interferences may exist due to sample matrix effects. Since results for the diluted sample are higher than the original, the reported results may be biased low.

- E. Results for the following field duplicate pair do not meet the relative percent difference (RPD) criterion or the absolute difference criterion provided in the National Functional Guidelines (NFG) for laboratory duplicate, as presented below.

Analyte	MYAME9, mg/kg	MYAMH5, mg/kg	RPD, %	QC Limit, %
Barium	175	134	26.5	20
Chromium	23.8	17.5	30.5	20
Lead	30.6	11.1	93.5	20
Vanadium	55.1	41.8	27.5	20

Analyte	MYAME9, mg/kg	MYAMH5, mg/kg	Difference, mg/kg	QC Limit, mg/kg
Arsenic	3.2	2.3	0.9	0.5

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Technical Direction No.: 10106218

Date: July 17, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48197
SDG No.:	MYAMF1
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	10 Soil Samples
Collection Dates:	April 9 and 10, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48197
SDG No.: MYAMF1
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Santiago Lee, ESAT
Date: July 17, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Background Samples (BG): None.
Field Duplicates: MYAMF5/MYAMH6 (in SDG MYAMG1).

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

Due to inconsistencies in the Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) results for sample MYAMF7, laboratory duplicate MYAMF7D, and laboratory spike MYAMF7S, the laboratory re-analyzed the ICP-AES digestates for samples in SDG MYAMF0 and reported all target analytes as SDG MYAMF1 (see Comment D). Results for SDG MYAMF1 were reviewed and designated as “reportable” in the EXS Data Manager; results for SDG MYAMF0 were designated as “not reportable.”

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

The field sample select for laboratory matrix quality control (duplicate and spike) is not representative of the soil samples in the SDG. The laboratory digested and analyzed the samples twice with only the MYAMF7 results indicating unusual sample heterogeneity. Therefore, sample results have not been qualified based on the matrix QC results.

Chain of custody records (COCs) indicate that the samples were collected on April 9 and 10, 2019 and shipped on April 12, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping. The laboratory documentation indicates that they were received on ice and at a temperature of 6.0°C.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

Parameter	Acceptable	Comment
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	N/A	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	N/A	
7. ICP Interference Check Sample (ICS)	No	C
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	N/A	
10. Spike Sample Analysis	N/A	
11. ICP Serial Dilution	N/A	
12. ICP-MS Internal Standards	N/A	
13. Analyte Quantitation and CRQL	No	A, D
14. Field Duplicate Sample Analysis	No	E
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB), continuing calibration blank (CCB), equipment blank (EB), and field blank (FB) contamination.
 - Antimony and selenium in all samples and preparation blank PBS01.
 - Cadmium in all samples except MYAMF1.
 - Chromium, manganese, and zinc in preparation blank PBS01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, $\mu\text{g/L}$
Antimony	ICB01/CCB02/CCB03	1.4/1.5/2.8
Cadmium	CCB03	0.086
Chromium	CCB03	0.46
Manganese	CCB02/CCB03	0.70/0/1.2
Selenium	ICB01	4.1
Zinc	CCB02/CCB03	1.1/1.8

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

C. The following detected results are estimated and flagged "J" due to high concentrations of interferents.

- Arsenic and silver in samples MYAMF1, MYAMF3, MYAMF5, MYAMF7, MYAMF8, and MYAMF9.
- Cadmium in sample MYAMF1.
- Copper in sample MYAMF9.

Iron (for arsenic, cadmium, copper, and silver interference) is present in samples listed above at concentrations greater than the concentrations in the ICS; the interference corrections calculated from the interferent concentrations may impact quantitation of detected results. These results are considered quantitatively uncertain.

D. The following results are qualified as estimated and flagged "J" or "UJ" due to unusually heterogeneous nature of the sample.

- All results for sample MYAMF7.

Samples in SDG MYAMF0 were digested in the laboratory in April 2019; copper was reported from the digestate for ICP-AES; other analytes were reported from the digestate for ICP-MS. The laboratory re-analyzed the ICP-AES digestates on April 26, 2019 and reported all target analytes as SDG MYAMF1 (i.e. this SDG). The reviewer compared the laboratory results from the two SDGs; significant outliers were found for sample MYAMF7, laboratory duplicate MYAMF7D, and laboratory spike MYAMF7S indicating that sample MYAMF7 is not homogenous while results for the two techniques for other samples were comparable. Due to the heterogeneous nature of sample MYAMF7, results are considered quantitatively uncertain.

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

E. Results for the following field duplicate pair do not meet the relative percent difference (RPD) criterion provided in the National Functional Guidelines (NFG) for laboratory duplicate, as presented below.

Analyte	MYAMF5, mg/kg	MYAMH6, mg/kg	RPD, %	QC Limit, %
Chromium	25.0	18.8	28.3	20

For sample MYAMH6, results for aluminum, calcium, iron, magnesium, potassium, and sodium are not reported; copper result is reported from the ICP-AES analysis and results for other analytes are reported from the ICP-MS analysis. This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Date: June 26, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48197
SDG No.:	MYAMG1
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES and ICP-MS
Samples:	18 Soil Samples
Collection Dates:	April 8, 9, 10, and 11, 2019
Reviewer:	Anna Pajarillo, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48197
SDG No.: MYAMG1
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES and ICP-MS
Reviewer: Anna Pajarillo, ESAT
Date: June 26, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): MYAMJ4 (in SDG MYAMH9).
Equipment Blanks (EB): MYAMH0, MYAMJ0, and MYAMJ1 (in SDG MYAMH9).
Background Samples (BG): None.
Field Duplicates: MYAMH5/MYAME9 (in SDG MYAMD5).
MYAMH6/MYAMF5 (in SDG MYAMF0).
MYAMH7/MYAMG1.
MYAMH8/MYAMG7.

CLP PO Action

The laboratory analyzed the matrix spike for copper with a concentration of 26.7 mg/kg instead of 50.0 mg/kg as stated in Table 2. See CLP SOW ISM02.4, Exhibit D, ICP-AES Pages D-24, Section 12.3.3.2 and D-31, Table 2.

The laboratory analyzed the post digestion spike for zinc with an added concentration of 56.6 mg/kg instead of 115.2 mg/kg (2 times the sample concentration). See CLP SOW ISM02.4, Exhibit D, ICP-MS Page D-25, Section 12.3.3.3.

Sampling Issues

None.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Copper was analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES). Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Mass Spectroscopy (ICP-MS).

Chain of custody records (COCs) indicate that the samples were collected on April 8, 9, 10, and 11, 2019 and shipped on April 12, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping. The laboratory documentation indicates that they were received on ice and at a temperature of 6.0°C.

Samples listed below did not meet the internal standard QC limit of 60-125% relative intensity (RI) in the initial analysis. The samples were diluted and reanalyzed as required by the statement of work (SOW). Results for beryllium, cobalt, nickel, and zinc in these samples are reported from the 2-fold dilution because the RIs are within the QC limit.

Sample	Internal Standard	% Relative Intensity from Undiluted	% Relative Intensity from 2-Fold Dilution
MYAMG3	Scandium-45	145	115
MYAMG5	Scandium-45	136	111
MYAMG7	Scandium-45	130	108
MYAMG9	Scandium-45	132	111
MYAMH1	Scandium-45	131	114
MYAMH3	Scandium-45	127	107
MYAMH5	Scandium-45	134	109
MYAMH6	Scandium-45	132	110
MYAMH7	Scandium-45	129	106
MYAMH8	Scandium-45	135	110

Although the undiluted analysis of sample MYAMG1 was within acceptance criteria for internal standard RI, beryllium, cobalt, nickel, and zinc were reported from a two-fold dilution. This sample was the designated lab QC sample. The scandium-45 RIs were outside QC limits for the associated matrix spike and duplicate samples. The matrix spike and duplicate samples were re-analyzed at a two-fold dilution as required by the SOW and the laboratory diluted and reanalyzed the parent sample (MYAMG1) as well. The reviewer compared the undiluted and two-fold dilution results for MYAMG1 and they are similar.

Preparation logbook pages for some solutions are missing from the data package. Data quality is not likely to be affected; all other standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	Yes	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	Yes	
7. ICP Interference Check Sample (ICS)	Yes	
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	Yes	
10. Spike Sample Analysis	No	C
11. ICP Serial Dilution	No	D
12. ICP-MS Internal Standards	Yes	
13. Analyte Quantitation and CRQL	Yes	A
14. Field Duplicate Sample Analysis	No	E
15. Overall Assessment of Data	Yes	

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.
 - Antimony in samples MYAMG3, MYAMG5, MYAMH1, MYAMH3, and MYAMH5 through MYAMH8.
 - Thallium in all samples and preparation blank PBS01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Antimony	ICB01/CCB04	0.29/0.10
Thallium	ICB01/CCB02/CCB03/CCB04	0.056/0.43/0.48/0.51

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- C. The following results are estimated and flagged "J+", "J-", or "UJ" because matrix spike recoveries are outside method QC limits.
 - Antimony, lead, vanadium, and zinc in all samples.

Matrix spike recoveries for the analytes listed below in QC sample MYAMG1S does not meet the 75-125% criterion for accuracy as presented below.

Analyte	% Recovery
Antimony	64
Lead	137
Vanadium	128
Zinc	135

The detected results for antimony are considered quantitatively uncertain and may be biased low. The detected results for lead, vanadium, and zinc are considered quantitatively uncertain and may be biased high. Since qualified results for antimony are nondetect in many samples, false negatives may exist.

The following post-digestion spike recoveries were reported in QC sample MYAMG1A. The post-digestion spike recoveries do not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recovery only.

Analyte	Post-Digestion Spike, % Recovery
Antimony	119
Lead	70
Vanadium	124
Zinc	111

Since the pre-/post-digestion spikes do not meet the QC criteria, the unacceptable pre/post-digestion spike recoveries may indicate poor laboratory technique or matrix effects which may interfere with the analysis.

The post-digestion spike for zinc in QC sample MYAMG1A does not comply with the SOW guidelines for post-digestion spike concentration and is invalid (see CLP PO Action). The spiking error has no impact on data usability.

- D. The following results are estimated and flagged "J" because serial dilution results are outside method QC limit.

- Cobalt, nickel, and zinc in all samples.

Percent differences for serial dilution analysis of MYAMG1L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Cobalt	14
Nickel	13
Zinc	12

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results for analytes listed above are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since results for the diluted sample are lower than the original, the reported results may be biased high.

- E. Results for the following field duplicate pair do not meet the relative percent difference (RPD) criterion or the absolute difference criterion provided in the National Functional Guidelines (NFG) for laboratory duplicate, as presented below.

Analyte	MYAME9, mg/kg	MYAMH5, mg/kg	RPD, %	QC Limit, %
Barium	175	134	26.5	20
Chromium	23.8	17.5	30.5	20
Lead	30.6	11.1	93.5	20
Vanadium	55.1	41.8	27.5	20

Analyte	MYAME9, mg/kg	MYAMH5, mg/kg	Difference, mg/kg	QC Limit, mg/kg
Arsenic	3.2	2.3	0.9	0.5

Analyte	MYAMF5, mg/kg	MYAMH6, mg/kg	RPD, %	QC Limit, %
Cobalt	9.3	13.3	35.4	20
Nickel	11.4	16.2	34.8	20
Zinc	62.2	84.8	30.7	20

Analyte	MYAMG7, mg/kg	MYAMH8, mg/kg	RPD, %	QC Limit, %
Copper	139	25.9	137	20
Lead	301	199	40.8	20
Zinc	778	464	50.6	20

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From: Kathy O'Brien, Sr. Project Manager *Kes*
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106218

Date: June 13, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48197
SDG No.:	MYAMH9
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-MS
Samples:	Six Water Samples
Collection Dates:	April 9, 10, and 11, 2019
Reviewer:	Anna Pajarillo, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48197
SDG No.: MYAMH9
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-MS
Reviewer: Anna Pajarillo, ESAT
Date: June 13, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): MYAMJ4.
Equipment Blanks (EB): MYAMH9, MYAMJ0, MYAMJ1, MYAMJ2, and MYAMJ3.
Background Samples (BG): None.
Field Duplicates: None.

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Mass Spectroscopy (ICP-MS).

Chain of custody records (COCs) indicate that the samples were collected on April 9, 10, and 11, 2019 and shipped on April 12, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping. The laboratory documentation indicates that they were received on ice and at a temperature of 6.0°C.

Matrix spike, duplicate, and serial dilution samples were not analyzed with the samples (batch TD15014). All samples in the batch are equipment and field blanks. The associated laboratory control sample (LCS) met quality control criteria.

Preparation logbook pages for some solutions are missing from the data package. Data quality is not likely to be affected; all other standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)*, ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

Parameter	Acceptable	Comment
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	Yes	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	N/A	
7. ICP Interference Check Sample (ICS)	Yes	
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	N/A	
10. Spike Sample Analysis	N/A	
11. ICP Serial Dilution	N/A	
12. ICP-MS Internal Standards	Yes	
13. Analyte Quantitation and CRQL	Yes	A
14. Field Duplicate Sample Analysis	N/A	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.
 - Antimony in samples MYAMJ3 and MYAMJ4.
 - Nickel and sodium in all samples and preparation blank PBW01.
 - Potassium in samples MYAMH9 and MYAMJ0.
 - Thallium in preparation blank PBW01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Antimony	ICB01	0.18
Nickel	ICB01/CCB01/CCB02	0.093/0.12/0.074
Potassium	CCB01	13.6
Sodium	ICB01/CCB01/CCB02	20.5/39.0/20.7
Thallium	CCB01/CCB02	0.37/0.38

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	YANT0
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Low Volatiles
Samples:	20 Soil Samples
Collection Date:	June 17 and 18, 2019
Reviewer:	Estrellita Manuel, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - Tier 3

Case No.: 48315
SDG No.: YANT0
Site: Damille Metal Service
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Low Volatiles
Reviewer: Estrellita Manuel, ESAT
Date: July 29, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Trip Blanks (TB): None.
Background Samples (BG): None.
Field Duplicates: YANY6 and YANY2 (in SDG YANX1).
YANY7 and YANZ0 (in SDG YANZ0).

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The COCs indicate that samples YANT0, YANT2 through YANT4, YANT9, YANW0 through YANW9, and YANX0 were collected on June 17, 2019 and shipped on June 19, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping.

Some peaks in samples YANW1, YANY7, and YANZ2 (tentatively identified compounds) were not reported. The laboratory provided revised data (Form 1B-OR and mass spectra) upon request on July 22, 2019. The updated electronic data deliverable (EDD) was uploaded to SMO portal on July 23, 2019.

All standards and spiking solutions were analyzed before the expiration date.

In addition to laboratory and field artifacts (retention times of 10.0, 10.6, 11.1, and 13.7 minutes), tentatively identified compounds (TICs) were found in samples YANT0, YANT4, YANW1, YANY7, and YANZ2 (see attached Form 1Bs).

The laboratory performed manual peak integration for some calibration and sample chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4, October 2016 and
- USEPA National Functional Guidelines for Superfund Organic Methods Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. GC/MS Instrument Performance Check	Yes	
4. Initial Calibration	Yes	
5. Continuing Calibration Verification (CCV)	Yes	
6. Laboratory Blanks	Yes	B
7. Field/Equipment/Trip Blanks	N/A	
8. Deuterated Monitoring Compound (DMC)	No	C
9. Matrix Spike/Matrix Spike Duplicate (MS/MSD)	Yes	
10. Internal Standard	No	D
11. Analyte Identification	Yes	
12. Analyte Quantitation and Reported CRQL	Yes	A
13. Field Duplicate Sample Analysis	Yes	
14. System Performance	Yes	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged “J.” Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged “U.”
 - Acetone in samples YANT2 through YANT4, YANT9, YANW0, YANW1, YANW3 through YANW5, YANW7, YANW8, YANY9, and YANZ2.

Acetone is present in method blanks VBLK28 and VBLK29 at 9.7 µg/kg and 7.9 µg/kg, respectively, and in storage blank VHBLK01 at 7.7 µg/kg. Results for acetone that are less than or equal to the CRQL are qualified as non-detected at the CRQL. Acetone results above two times the associated blank concentration are not qualified.

- C. Results for the following analytes are qualified as estimated due to DMC recoveries outside QC limits and are flagged “J+.”
 - {2-Butanone-d5}
 - Acetone and 2-butanone in sample YANT0.
 - Acetone in laboratory QC sample YANZ2MSD.

The DMC recoveries for the qualifications listed above are shown below.

<u>Sample</u>	<u>DMC</u>	<u>% Recovery</u>	<u>QC Limit</u>
YANT0	2-Butanone-d5	151	20-135
YANZ2MSD	2-Butanone-d5	137	20-135

For DMC recoveries that exceed QC limits, only detected results for associated analytes are qualified; qualified results may be biased high. The samples listed above were not re-analyzed.

Recoveries for DMCs 2-hexanone-d5 (150%) and 1,1,2,2-tetrachloroethane-d2 (127%) exceed QC limits in sample YANT0, indicating potential high bias in detected results; qualification is not necessary because the associated target analytes are not detected.

- D. Results for the following analytes are qualified as estimated due to low internal standard (IS) areas and are flagged “J+” or “UJ.”

- Bromoform, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, 1,2,4-trichlorobenzene, and 1,2,3-trichlorobenzene in sample YANT4.
- All analytes in laboratory QC sample YANZ2MSD.

The IS areas outside QC limits are shown below.

<u>Sample</u>	<u>Internal Standard</u>	<u>Area</u>	<u>QC Limit</u>
YANT4	1,4-Dichlorobenzene-d4	77,050	78,008-312,032
YANZ2MSD	1,4-Difluorobenzene	128,838	169,697-678,786
YANZ2MSD	Chlorobenzene-d5	126,673	157,807-631,228
YANZ2MSD	1,4-Dichlorobenzene-d4	60,624	78,008-312,032

Detected results for the affected analytes may be biased high. Where qualified results are nondetected, false negatives may exist. Sample YANT4 was re-analyzed and the areas for all three ISs for the re-analysis were outside the QC limits. The reviewer reported results from the original analysis of sample YANT4 in the EXES Data Manager.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Sample Summary Report

Project Name: DAMILLE METAL SERVICE SITE
INVESTIGATION STAGE 2 SAMPLING

GroupID: 48315/EPW14030/YANT0

Lab Name: Chemtech Consulting Group

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From: for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106227

Date: July 29, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	YANX1
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Low Volatiles
Samples:	20 Soil Samples
Collection Date:	June 17 and 18, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - Tier 3

Case No.: 48315
SDG No.: YANX1
Site: Damille Metal Service
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Low Volatiles
Reviewer: Santiago Lee, ESAT
Date: July 29, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Trip Blanks (TB): None.
Background Samples (BG): None.
Field Duplicates: YANX6/YANX9.
YANY1/YANY5.
YANY2/YANY6 (in SDG YANT0).

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

The COCs indicate that samples YANT5 through YANT8 were collected on June 17, 2019 and shipped on June 19, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping.

For sample YANY3, recoveries for deuterated monitoring compounds (DMCs) 2-butanone-d5 (147%) and 2-hexanone-d5 (143%) exceeded the QC limit of 20-135%. The associated target analytes are nondetected in the sample and are not qualified, in accordance with the National Functional Guidelines.

All standards and spiking solutions were analyzed before the expiration date.

Other than laboratory and field artifacts (retention times of 10.0, 11.1, and 13.7 minutes), tentatively identified compounds (TICs) were not found in the samples.

The laboratory performed manual peak integration for some calibration chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4, October 2016 and
- USEPA National Functional Guidelines for Superfund Organic Methods Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. GC/MS Instrument Performance Check	Yes	
4. Initial Calibration	No	B
5. Continuing Calibration Verification (CCV)	Yes	
6. Laboratory Blanks	Yes	C
7. Field/Equipment/Trip Blanks	N/A	
8. Deuterated Monitoring Compound (DMC)	Yes	
9. Matrix Spike/Matrix Spike Duplicate (MS/MSD)	Yes	
10. Internal Standard	No	D
11. Analyte Identification	Yes	
12. Analyte Quantitation and Reported CRQL	Yes	A
13. Field Duplicate Sample Analysis	No	E
14. System Performance	Yes	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged “J.” Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. Results for the following analyte are qualified as estimated due to a large percent relative standard deviation (%RSD) in the initial calibration and are flagged “UJ.”
 - Carbon disulfide in samples YANX1, YANX2, and YANX3 and method blank VBLK23.

The %RSD of 20.9% reported for carbon disulfide in the June 21, 2019 initial calibration exceeds the 20.0% validation criterion. In addition, the relative response factor (RRF) of 0.607 for the 2.5 µg/L CRQL standard is below the average RRF of 0.874, indicating low sensitivity and increased uncertainty at the CRQL.

- C. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged “U.”
 - Acetone in samples YANT5 through YANT8, YANX2, YANX3, YANX5, YANX7 through YANX9, and YANY1 through YANY5.

Acetone is present in method blanks VBLK28 and VBLK29 at 9.7 µg/kg and 7.9 µg/kg, respectively, and in storage blank VHBLK01 at 5.4 µg/kg. Results for acetone that are less than or equal to the CRQL are qualified as non-detected at the CRQL. Acetone results above two times the associated blank concentration are not qualified.

- D. Results for the following analytes are qualified as estimated due to low internal standard (IS) areas and are flagged "J+" or "UJ."

- All analytes in sample YANX6.

The IS areas outside QC limits are shown below.

<u>Sample</u>	<u>Internal Standard</u>	<u>Area</u>	<u>QC Limit</u>
YANX6	1,4-Difluorobenzene	143,449	201,080-804,320
YANX6	Chlorobenzene-d5	166,043	182,409-729,634
YANX6	1,4-Dichlorobenzene-d4	69,435	90,992-363,968
YANX6RE	1,4-Difluorobenzene	132,438	178,781-715,124
YANX6RE	Chlorobenzene-d5	119,676	158,559-634,234
YANX6RE	1,4-Dichlorobenzene-d4	50,666	77,145-308,580

Detected results for the affected analytes may be biased high. Where qualified results are nondetected, false negatives may exist. Sample YANX6 was re-analyzed and the re-analysis results are similar. Results from the re-analysis are reported in the EXES Data Manager because the DMC recoveries are within QC limit (five DMC recoveries are outside QC limit for original analysis).

Data users should note that results for the original analysis and the re-analysis are not consistent, as shown below. There are no additional Encore samplers left for further analysis.

<u>Analyte</u>	<u>YANX6</u>	<u>YANX6RE</u>
	<u>Concentration, µg/kg</u>	<u>Concentration, µg/kg</u>
Acetone	75	35
Methyl Acetate	9.2	Non-detect
Methylene Chloride	Non-detect	14
Toluene	6.5	Non-detect

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

- E. In the analysis of the field duplicate pairs, the following outliers (relative percent difference greater than 25%) are reported.

<u>Analyte</u>	<u>YANX6</u>	<u>YANX9</u>	<u>RPD</u>
	<u>Concentration, µg/kg</u>	<u>Concentration, µg/kg</u>	
Acetone	35	Non-detect	---
Methylene Chloride	14	5.7	84

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From:  for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106232 (reissue of 10106227)

Date: August 1, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	YANZ0
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Low Volatiles
Samples:	Four Soil Samples
Collection Date:	June 18, 2019
Reviewer:	Estrellita Manuel, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - Tier 3

Case No.: 48315
SDG No.: YANZ0
Site: Damille Metal Service
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Low Volatiles
Reviewer: Estrellita Manuel, ESAT
Date: August 1, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Trip Blanks (TB): None.
Background Samples (BG): None.
Field Duplicates: YANZ0 and YANY7 (in SDG YANT0).

CLP PO Action

None.

Sampling Issues

None.

Additional Comments

A peak in sample YANZ0 (tentatively identified compound) was not reported. The laboratory provided revised data (Form 1B-OR and mass spectra) upon request on July 22, 2019. The updated electronic data deliverable (EDD) was uploaded to SMO portal on July 23, 2019.

Nondetected results for all analytes in laboratory QC sample YANZ3MS were flagged by the EXES Data Manager as rejected (R) due to very low internal standard (IS) areas (see Comment C).

Recoveries for deuterated monitoring compounds (DMCs) 2-hexanone-d5 (137%) and 1,1,2,2-tetrachloroethane-d2 (121%) exceed QC limits in sample YANZ1, indicating potential high bias in detected results; qualification is not necessary because the associated target analytes are not detected.

All standards and spiking solutions were analyzed before the expiration date.

In addition to laboratory and field artifacts (retention times of 10.0, 10.6, 11.1, and 13.7 minutes), a tentatively identified compound (TIC) was found in sample YANZ0 (see attached Form 1B).

The laboratory performed manual peak integration for some calibration and sample chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4, October 2016 and
- USEPA National Functional Guidelines for Superfund Organic Methods Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. GC/MS Instrument Performance Check	Yes	
4. Initial Calibration	Yes	
5. Continuing Calibration Verification (CCV)	Yes	
6. Laboratory Blanks	Yes	B
7. Field/Equipment/Trip Blanks	N/A	
8. Deuterated Monitoring Compound (DMC)	Yes	
9. Matrix Spike/Matrix Spike Duplicate (MS/MSD)	No	C
10. Internal Standard	No	C
11. Analyte Identification	Yes	
12. Analyte Quantitation and Reported CRQL	Yes	A
13. Field Duplicate Sample Analysis	Yes	
14. System Performance	Yes	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as nondetected due to method blank and storage blank contamination and are flagged "U."
 - Acetone in all samples.

Acetone is present in method blanks VBLK28 and VBLK29 at 9.7 µg/kg and 7.9 µg/kg, respectively, and in storage blank VHBLK01 at 7.5 µg/kg. Results for acetone that are less than or equal to the CRQL are qualified as non-detected at the CRQL.

- C. Relative percent differences (RPDs) for 1,1-dichloroethene, benzene, toluene, and chlorobenzene in laboratory QC samples YANZ3MS and YANZ3MSD do not meet the criteria for precision specified in the SOW, as shown below.

<u>Analyte</u>	<u>RPD, %</u>	<u>QC Limit, %</u>
1,1-Dichloroethene	23	22
Benzene	23	21
Toluene	30	21

<u>Analyte</u>	<u>RPD, %</u>	<u>QC Limit, %</u>
Chlorobenzene	23	21

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

In addition, the EXES Data Manager flagged nondetected results for the QC sample YANZ3MS as “R” and detected results as “J+” due to very low internal standard (IS) areas (<20%).

The IS areas outside QC limits are shown below.

<u>Sample</u>	<u>Internal Standard</u>	<u>Area</u>	<u>QC Limit</u>
YANZ3MS	1,4-Difluorobenzene	50,912	180,869-723,476
YANZ3MS	Chlorobenzene-d5	50,022	160,987-643,948
YANZ3MS	1,4-Dichlorobenzene-d4	21,323	78,971-315,884

Detected results for the affected analytes may be biased high. Nondetected results are considered unusable (R) according to the National Functional Guidelines. There are no additional Encore samplers left for further analysis.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Technical Direction No.: 10106232 (reissue of 10106227)

Date: August 01, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	YANZ5
Laboratory:	Chemtech Consulting Group (CHM)
Analysis:	CLP Trace Volatiles
Samples:	10 Water Samples
Collection Date:	June 17 through 19, 2019
Reviewer:	Estrellita Manuel, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report - Tier 3

Case No.: 48315
SDG No.: YANZ5
Site: Damille Metal Service
Laboratory: Chemtech Consulting Group (CHM)
Analysis: CLP Trace Volatiles
Reviewer: Estrellita Manuel, ESAT
Date: August 01, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Organic Analytic Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in pages 6 and 7 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): YAP04.
Equipment Blanks (EB): YANZ5, YAP02, and YAP03.
Trip Blanks (TB): None.
Background Samples (BG): None.
Field Duplicates: YAP01 and YAP05.

CLP PO Action

None.

Sampling Issues

Field and equipment blanks were not submitted “blind” to the laboratory because “Equipment Blank” and “Field Blank” were used as location on chain of custody records (COCs).

Additional Comments

The COCs indicate that samples YANZ9, YAP00, YAP01, and YAP05, field blank YAP04, and equipment blank YANZ5 were collected on June 17 and 18, 2019 and shipped on June 20, 2019. The reviewer presumed that the samples were stored properly from the time of collection to the time of shipping.

All standards and spiking solutions were analyzed before the expiration date.

In addition to laboratory and field artifacts (retention times of 7.0 and 11.6 minutes), tentatively identified compounds (TICs) were found in the samples YANZ9, YAP01, YAP03, and YAP05 through YAP07 (see attached Form 1Bs).

The laboratory performed manual peak integration for some calibration chromatograms. Manual integrations were reviewed and found to be in compliance with CLP Statement of Work (SOW) requirements.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4, October 2016 and
- USEPA National Functional Guidelines for Superfund Organic Methods Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Organics Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4.*

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. GC/MS Instrument Performance Check	Yes	
4. Initial Calibration	Yes	
5. Continuing Calibration Verification (CCV)	Yes	
6. Laboratory Blanks	Yes	
7. Field/Equipment/Trip Blanks	Yes	
8. Deuterated Monitoring Compound (DMC)	No	B
9. Matrix Spike/Matrix Spike Duplicate (MS/MSD)	Yes	
10. Internal Standard	Yes	
11. Analyte Identification	Yes	
12. Analyte Quantitation and Reported CRQL	Yes	A
13. Field Duplicate Sample Analysis	Yes	
14. System Performance	Yes	
15. Overall Assessment of Data	Yes	

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. Results for the following analytes are qualified as estimated due to a low DMC recovery and are flagged "UJ."

- {1,1-Dichloroethene-d2}
- 1,1-Dichloroethene, trans-1,2-dichloroethene, and cis-1,2-dichloroethene in equipment blank YANZ5.

The DMC recovery for the qualification listed above is shown below.

<u>Sample</u>	<u>DMC</u>	<u>% Recovery</u>	<u>QC Limit</u>
YANZ5	1,1-Dichloroethene-d2	55	60-125

Since qualified results are nondetected, false negatives may exist. Equipment blank YANZ5 was not re-analyzed.

Recoveries for DMCs 2-butanone-d5 (138%), 2-hexanone-d5 (136%), and 1,1,2,2-tetrachloroethane-d2 (124%) exceed QC limits in equipment blank, indicating potential high bias in detected results; qualification is not necessary because the associated target analytes are not detected.

DATA QUALIFIER DEFINITIONS FOR ORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Superfund Organic Methods Data Review," January 2017 (Table 1, pages 6 and 7).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation Limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- NJ The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatograph/Mass Spectrometer (GC/MS).
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed.

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From: ~~KO~~ for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106232 (reissue of 10106227)

Date: August 5, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	MYANT0
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	12 Soil Samples
Collection Dates:	June 17, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48315
SDG No.: MYANT0
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Santiago Lee, ESAT
Date: August 5, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Background Samples (BG): None.
Field Duplicates: None.

CLP PO Action

Nondetected results for antimony in all samples are qualified as rejected (R) due to a matrix spike recovery below 30% (see Comment A).

Sampling Issues

Samples were shipped to the laboratory on June 20, 2019 and received at the laboratory on June 21, 2019, four days after collection on June 17, 2019.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

Contract required quantitation limit (CRQL) values recorded on Form 3-IN Blanks for the preparation blank are reported at the water CRQL rather than the soil CRQL. For example, antimony is reported as nondetected at 60.0 µg/L (water CRQL); however, the CRQL for soil is 6.0 mg/kg. The CRQLs for the preparation blank are correctly reported in the EXES Data Manager. This is a reporting issue in the data package only.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	N/A	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	C
6. Field/Equipment Blanks	N/A	
7. ICP Interference Check Sample (ICS)	No	D
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	No	E
10. Spike Sample Analysis	No	A
11. ICP Serial Dilution	No	F
12. ICP-MS Internal Standards	N/A	
13. Analyte Quantitation and CRQL	Yes	B
14. Field Duplicate Sample Analysis	N/A	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. The following nondetected results are rejected and flagged "R" due to a matrix spike recovery below 30%.
- Antimony in all samples.

The matrix spike recovery is less than 30% for antimony in QC sample MYANT0S as presented below.

<u>Analyte</u>	<u>% Recovery (%R)</u>	<u>Post-Digestion Spike, %R</u>
Antimony	21	76

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The post-digestion spike recovery does not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recoveries only. Nondetected results for antimony in the samples listed above are unusable.

- B. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- C. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.
- Aluminum, chromium, and zinc in preparation blank PBS01.
 - Antimony and cadmium in all samples.
 - Beryllium in all samples except MYANW2.
 - Cobalt and nickel in samples MYANT7 and MYANW1.

- Selenium in all samples and preparation blank PBS01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, $\mu\text{g/L}$
Aluminum	CCB04	41.3
Antimony	ICB01/CCB03/CCB04	1.4/2.8/4.1
Beryllium	CCB04	0.16
Cadmium	CCB03/CCB04	0.086/0.39
Chromium	CCB03/CCB04	0.46/3.9
Cobalt	CCB04	1.0
Nickel	CCB04	1.6
Selenium	ICB01/CCB04	4.1/5.3
Zinc	CCB03/CCB04	1.8/6.5

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- D. The following detected results are estimated and flagged "J" because high concentrations of interferences in the samples may significantly impact quantitation.
- Arsenic in samples MYANT2, MYANT4, MYANT5, MYANT8, MYANT9, and MYANW2.
 - Silver in samples MYANT2, MYANT4, MYANT5, MYANT6, MYANT8, MYANT9, and MYANW2.

Iron (for arsenic and silver interference) is present in samples listed above at concentrations greater than the concentrations in ICS; the interference corrections calculated from iron concentrations may impact quantitation of arsenic and silver. Detected results in the samples listed above are considered quantitatively uncertain.

- E. The following results are estimated and flagged "J" because a laboratory duplicate result is outside method QC limit.
- Lead in all samples.

The result for laboratory duplicate MYANT0D does not meet the 20% relative percent difference (RPD) criterion as presented below.

Analyte	RPD, %
Lead	27

This result may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results for lead are considered quantitatively uncertain.

- F. The following results are estimated and flagged "J" or "UJ" because serial dilution results are outside method QC limit.
- Aluminum, arsenic, barium, beryllium, calcium, cobalt, iron, magnesium, manganese, and potassium in all samples.

Percent differences for serial dilution analysis of MYANT0L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Aluminum	12
Arsenic	12
Barium	12
Beryllium	14
Calcium	12
Cobalt	17
Iron	13
Magnesium	14
Manganese	13
Potassium	11

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since beryllium result for the diluted sample are lower than the original, the reported results may be biased high. For other analytes listed above, the reported results may be biased low because results for the diluted sample are higher than the original.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From:  for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106232 (reissue of 10106227)

Date: August 7, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	MYANW3
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	16 Soil Samples
Collection Dates:	June 17 and 18, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48315
SDG No.: MYANW3
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Santiago Lee, ESAT
Date: August 7, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Background Samples (BG): None.
Field Duplicates: None.

CLP PO Action

None.

Sampling Issues

1. The samples were received by the laboratory with a cooler temperature of 28°C which is above the $\leq 6^{\circ}\text{C}$ sample preservation criterion (see Additional Comments).
2. Samples were shipped to the laboratory on June 20, 2019 and received at the laboratory on June 24, 2019, 6-7 days after collection on June 17 and 18, 2019.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

As noted in Sampling Issues above, the samples were not adequately maintained at $\leq 6^{\circ}\text{C}$ as specified in the SOW. Technical judgment indicates no adverse effect is expected on metal results; this is substantiated by the recommended preservation criteria for metals in Table 3-2 of EPA publication SW-846, Update V, Revision 5, July 2014 (preservation criteria for metals does not require chilling).

Sample MYANW5 was received with standing water; as Region 9 instructed, the sample was decanted prior to analysis.

Contract required quantitation limit (CRQL) values recorded on Form 3-IN Blanks for the preparation blank are reported at the water CRQL rather than the soil CRQL. For example, antimony is reported as nondetected at 60.0 $\mu\text{g/L}$ (water CRQL); however, the CRQL for soil is 6.0 mg/kg. The CRQLs for the preparation blank are correctly reported in the EXES Data Manager. This is a reporting issue in the data package only.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	N/A	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	N/A	
7. ICP Interference Check Sample (ICS)	No	C
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	Yes	
10. Spike Sample Analysis	No	D
11. ICP Serial Dilution	No	E
12. ICP-MS Internal Standards	N/A	
13. Analyte Quantitation and CRQL	Yes	A
14. Field Duplicate Sample Analysis	N/A	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB), continuing calibration blank (CCB), and preparation blank (PB) contamination.
 - Aluminum and zinc in preparation blank PBS01.
 - Antimony and beryllium in all samples.
 - Cadmium in samples MYANW4 through MYANW6, MYANW9, MYANX0, MYANY1 through MYANY3, and MYANZ2 through MYANZ4.
 - Cobalt and nickel in samples MYANW5, MYANW9, and MYANZ3.
 - Selenium in all samples except MYANW8.
 - Sodium in all samples except MYANY0 and MYANY3.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Aluminum	CCB02	21.0
Antimony	CCB01/CCB02	1.8/1.3
Beryllium	ICB01/CCB01/CCB02	0.019/0.028/0.094
Cadmium	CCB02	0.096
Cobalt	CCB02	0.20
Nickel	CCB02	0.38
Selenium	PBS01	0.17
Sodium	CCB01/CCB02	36.3/41.1
Zinc	CCB02	2.4

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- C. The following detected results are estimated and flagged “J” because high concentrations of interferences in the samples may significantly impact quantitation.
- Arsenic and silver in samples MYANW4, MYANW7, MYANW8, MYANY0, MYANY3, and MYANZ1.
 - Cadmium in samples MYANW3, MYANW7, MYANW8, MYANY0, and MYANZ1.

Iron (for arsenic, cadmium, and silver interference) is present in samples listed above at concentrations greater than the concentrations in ICS; the interference corrections calculated from iron concentrations may impact quantitation of the associated metals. Detected results in the samples listed above are considered quantitatively uncertain.

- D. The following results are estimated and flagged “UJ” because a matrix spike recovery is outside method QC limit.
- Antimony in all samples.

The matrix spike recovery for antimony in QC sample MYANZ3S does not meet the 75-125% criterion for accuracy as presented below.

Analyte	% Recovery (%R)	Post-Digestion Spike, %R
Antimony	42	91

This result may indicate poor laboratory technique or matrix effects which may interfere with analysis. The post-digestion spike recovery does not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recovery only.

- E. The following results are estimated and flagged “J” or “UJ” because serial dilution results are outside method QC limit.
- Aluminum, barium, beryllium, calcium, chromium, cobalt, copper, iron, magnesium, manganese, potassium, sodium, and vanadium in all samples.

Percent differences for serial dilution analysis of MYANW3L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Aluminum	15
Barium	15
Beryllium	12
Calcium	16
Chromium	19
Cobalt	26
Copper	11
Iron	17
Magnesium	16
Manganese	17
Potassium	14
Sodium	12
Vanadium	19

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. Results are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since results for the diluted sample are higher than the original, the reported results may be biased low.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Sample Summary Report

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From: for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106227

Date: July 29, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	MYANX1
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	16 Soil Samples
Collection Dates:	June 18, 2019
Reviewer:	Anna Pajarillo, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48315
SDG No.: MYANX1
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Anna Pajarillo, ESAT
Date: July 29, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): None.
Equipment Blanks (EB): None.
Background Samples (BG): None.
Field Duplicates: MYANX6 and MYANX9.
MYANY1 (in SDG MYANW3) and MYANY5.
MYANY2 (in SDG MYANW3) and MYANY6.
MYANY7 and MYANZ0.

CLP PO Action

None.

Sampling Issues

1. The samples were received by the laboratory with a cooler temperature of 27°C which is above the $\leq 6^{\circ}\text{C}$ sample preservation criterion (see Additional Comments).
2. Samples were shipped to the laboratory on June 20, 2019 and received at the laboratory on June 24, 2019, six days after collection on June 18, 2019.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

As noted in Sampling Issues above, the samples were not adequately maintained at $\leq 6^{\circ}\text{C}$ as specified in the SOW. Technical judgment indicates no adverse effect is expected on metal results; this is substantiated by the recommended preservation criteria for metals in Table 3-2 of EPA publication SW-846, Update V, Revision 5, July 2014 (preservation criteria for metals does not require chilling).

Contract required quantitation limit (CRQL) values recorded on Form 3-In Blanks for the preparation blank are reported at the water CRQL rather than the soil CRQL. For example, antimony is reported as nondetected at 60.0U (water CRQL); however, the CRQL for soil is 6.0 mg/kg. The CRQLs for the preparation blank are correctly reported in the EXES Data Manager. This is a reporting issue in the data package only.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms)*, USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	Yes	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	N/A	
7. ICP Interference Check Sample (ICS)	No	C
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	Yes	
10. Spike Sample Analysis	No	D
11. ICP Serial Dilution	No	E
12. ICP-MS Internal Standards	Yes	
13. Analyte Quantitation and CRQL	Yes	A, G
14. Field Duplicate Sample Analysis	No	F
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.
 - Beryllium in all samples except MYANX9 and in preparation blank PBS01.
 - Cadmium in all samples except MYANX5.
 - Cobalt in samples MYANY7 and MYANY8.
 - Iron, magnesium, and zinc in preparation blank PBS01.
 - Silver in all samples except MYANX5, MYANX6, and MYANX9.
 - Sodium in samples MYANX3, MYANX4, MYANX7, MYANY6, and MYANY8.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Beryllium	ICB/CCB01/CCB02	0.095/0.095/0.28
Cadmium	CCB02	0.16
Cobalt	CCB02	0.37
Iron	CCB02	13.3
Magnesium	CCB02	40.5
Silver	ICB01	0.37
Sodium	CCB01/CCB02	32.4/31.1
Zinc	CCB02	2.4

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- C. The following detected results are estimated and flagged “J” because high concentrations of interferences in the samples may significantly impact quantitation.

- Arsenic in samples MYANX1, MYANX2, MYANX5, MYANX6, MYANX8, MYANX9, MYANY4, and MYANY9.
- Cadmium in sample MYANX5.
- Lead in samples MYANX6 and MYANX9.
- Silver in samples MYANX5, MYANX6, and MYANX9.

Aluminum (for lead interference) and iron (for arsenic, cadmium, and silver interference) are present in samples listed above at concentrations greater than the concentrations in the ICS; the interference corrections calculated from the aluminum and iron concentrations may impact quantitation of the associated metals. Detected results in the samples listed above are considered quantitatively uncertain.

- D. The following results are estimated and flagged “J-” because a matrix spike recovery is outside method QC limit.

- Antimony in all samples.

Matrix spike recovery for antimony in QC sample MYANY8S does not meet the 75-125% criterion for accuracy as presented below.

Analyte	% Recovery	Post-Digestion Spike, % Recovery
Antimony	38	87

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. Detected results for antimony are considered quantitatively uncertain and may be biased low. The post-digestion spike recoveries do not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recoveries only.

- E. The following results are estimated and flagged “J” or “UJ” because serial dilution results are outside method QC limit.

- Arsenic, beryllium, cobalt, copper, and nickel in all samples.

Percent differences for serial dilution analysis of MYANY8L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Arsenic	25
Beryllium	50
Cobalt	11
Copper	15
Nickel	12

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The results are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since beryllium and cobalt results for the diluted sample are higher than the original, the reported results may be biased low. For other analytes listed above, the reported results may be biased high since results for the diluted sample are lower than the original.

- F. Results for the following field duplicate pairs do not meet the relative percent difference (RPD) criterion or the absolute difference criterion provided in the National Functional Guidelines (NFG) for laboratory duplicate, as presented below.

Analyte	MYANX6, mg/kg	MYANX9, mg/kg	RPD, %	QC Limit, %
Arsenic	6.2	7.8	22.9	20
Barium	246	307	22.1	20
Calcium	12700	16600	26.6	20
Copper	35.4	43.6	20.8	20
Manganese	493	644	26.6	20

Analyte	MYANY1, mg/kg	MYANY5, mg/kg	RPD, %	QC Limit, %
Aluminum	7420	9330	22.8	20
Chromium	9.1	13.3	37.5	20
Iron	12700	17700	32.9	20
Magnesium	3830	4780	22.1	20
Manganese	199	250	22.7	20
Vanadium	24.7	33.1	29.1	20
Zinc	33	41.5	22.8	20

Analyte	MYANY1, mg/kg	MYANY5, mg/kg	Difference, mg/kg	QC Limit, mg/kg
Barium	60.8	83.5	22.7	20
Copper	8.4	11	2.6	2.5
Potassium	2170	2890	720	500

Analyte	MYANY2, mg/kg	MYANY6, mg/kg	RPD, %	QC Limit, %
Calcium	9080	4550	66.5	20
Manganese	250	169	38.7	20

Analyte	MYANY7, mg/kg	MYANZ0, mg/kg	RPD, %	QC Limit, %
Aluminum	6530	8220	22.9	20
Chromium	7.9	11.3	35.4	20
Iron	11800	15600	27.7	20
Magnesium	3150	3960	22.8	20

Analyte	MYANY7, mg/kg	MYANZ0, mg/kg	Difference, mg/kg	QC Limit, mg/kg
Vanadium	21.9	29.6	7.7	5.0
Zinc	27.8	34.7	6.9	6.0

This uncertainty should be evaluated in the context of project data quality objectives to determine data usability.

- G. Sample MYANX1 was reanalyzed at a two-fold dilution due to calcium concentration exceeding the calibration range. Calcium is reported from the diluted analysis.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Date: July 29, 2019

Re: Review of Analytical Data, Tier 3

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	MYANZ5
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	Six Water Samples
Collection Dates:	June 17, 18, and 19, 2019
Reviewer:	Anna Pajarillo, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48315
SDG No.: MYANZ5
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Anna Pajarillo, ESAT
Date: July 29, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): MYAP04.
Equipment Blanks (EB): MYANZ5, MYAP02, and MYAP03.
Background Samples (BG): None.
Field Duplicates: None.

CLP PO Action

Nondetected results for antimony in samples MYANZ9 and MYAP07 are qualified as rejected (R) due to a matrix spike recovery below 30% (see Comment A).

Sampling Issues

1. The samples were received by the laboratory with cooler temperatures of 27°C and 28°C which are above the $\leq 6^{\circ}\text{C}$ sample preservation criterion (see Additional Comments).
2. Contamination above the contract required quantitation limit (CRQL) was found for iron in equipment blank MYAP03. No qualification is needed since sample results are greater than ten times the blank result.
3. Samples were shipped to the laboratory on June 20, 2019 and received at the laboratory on June 24, 2019, 5-7 days after collection on June 17, 18, and 19, 2019.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

As noted in Sampling Issues above, the samples were not adequately maintained at $\leq 6^{\circ}\text{C}$ as specified in the SOW. Technical judgment indicates no adverse effect is expected on metal results; this is substantiated by the recommended preservation criteria for metals in Table 3-2 of EPA publication SW-846, Update V, Revision 5, July 2014 (preservation criteria for metals does not require chilling).

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and

- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)*, ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

<u>Parameter</u>	<u>Acceptable</u>	<u>Comment</u>
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	Yes	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	C
6. Field/Equipment Blanks	Yes	
7. ICP Interference Check Sample (ICS)	Yes	
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	Yes	
10. Spike Sample Analysis	No	A
11. ICP Serial Dilution	No	D
12. ICP-MS Internal Standards	Yes	
13. Analyte Quantitation and CRQL	Yes	B
14. Field Duplicate Sample Analysis	N/A	
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. The following nondetected results are rejected and flagged “R” due to a matrix spike recovery below 30%.
- Antimony in samples MYANZ9 and MYAP07.

The matrix spike recovery is less than 30% for antimony in QC sample MYAP07S as presented below.

Analyte	% Recovery (%R)	Post-Digestion Spike, %R
Antimony	12	95

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The post-digestion spike recovery does not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recoveries only. Nondetected results for antimony in the samples listed above are unusable.

- B. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged “J.” Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.

C. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.

- Aluminum in equipment blank MYAP02.
- Antimony and cadmium in samples MYANZ9 and MYAP07.
- Calcium in equipment blanks MYANZ5, MYAP02, and MYAP03.
- Chromium in equipment blank MYAP03.
- Copper in equipment blanks MYAP02 and MYAP03 and preparation blank PBW01.
- Iron in equipment blank MYAP02.
- Magnesium and potassium in equipment blanks MYANZ5, MYAP02, and MYAP03 and field blank MYAP04.
- Manganese in equipment blanks MYAP02 and MYAP03.
- Sodium in equipment blanks MYANZ5, MYAP02, and MYAP03 and preparation blank PBW01.
- Zinc in equipment blanks MYANZ5, MYAP02, and MYAP03, field blank MYAP04, and preparation blank PBW01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Aluminum	CCB02	21.8
Antimony	CCB02	1.8
Cadmium	CCB02	0.20
Calcium	CCB02	56.2
Chromium	CCB02	1.3
Copper	CCB02	0.53
Iron	CCB02	19.1
Magnesium	CCB02	44.2
Manganese	CCB02	1.8
Potassium	CCB01/CCB02	81.1/128
Sodium	CCB01/CCB02	46.9/99.8
Zinc	CCB02	3.2

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

D. The following results are estimated and flagged "J" because serial dilution results are outside method QC limit.

- Cobalt, iron, magnesium, and manganese in samples MYANZ9 and MYAP07.

Percent differences for serial dilution analysis of MYAP07L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Cobalt	17
Iron	11
Magnesium	11
Manganese	12

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The results are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since results for the diluted sample are higher than the original, the reported results may be biased low.

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Sample Summary Report

**Project Name: DAMILLE METAL SERVICE SITE
INVESTIGATION STAGE 2 SAMPLING**

GroupID: 48315/EPW14029/MYANZ5

Lab Name: Bonner Analytical Testing Co.

Memorandum

To: Matt Mitguard, Site Assessment Manager
Site Cleanup Section 2, SFD-6-1
USEPA Region 9

Through: Joe Eidelberg, Chemist
Quality Assurance Section, EMD-3-2
USEPA Region 9

From:  for Kathy O'Brien, Sr. Project Manager
ICF, Environmental Services Assistance Team (ESAT) Region 9

ESAT Contract No.: EP-W-13-029
Technical Direction No.: 10106232 (reissue of 10106227)

Date: August 8, 2019

Re: Review of Analytical Data, **Tier 3**

Attached are comments resulting from ESAT Region 9 review of the following analytical data:

Site:	Damille Metal Service
Site Account No.:	A9 CG QA 00
Case No.:	48315
SDG No.:	MYAP00
Laboratory:	Bonner Analytical Testing Co. (BON)
Analysis:	CLP Metals by ICP-AES
Samples:	Four Water Samples
Collection Dates:	June 18 and 19, 2019
Reviewer:	Santiago Lee, ESAT

EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal.

If there are any questions, please contact Joe Eidelberg (QA Program/EPA) at (415) 972-3809.

Data Validation Report – Tier 3

Case No.: 48315
SDG No.: MYAP00
Site: Damille Metal Service
Laboratory: Bonner Analytical Testing Co. (BON)
Analysis: CLP Metals by ICP-AES
Reviewer: Santiago Lee, ESAT
Date: August 8, 2019

I. SDG SUMMARY

For Sample Information and Laboratory Quality Control (QC), refer to EXES National Functional Guidelines (NFG) data validation reports *Analytical Sample Listing* and *Inorganic Analytical Sequence*. EXES Data Manager has been updated with the results of this review and the validation level revised to S3VEM; the dynamic deliverables were regenerated and are available on the SMO Portal. The data qualifier definitions, as described in page 6 of the National Functional Guidelines, are attached to this report.

Field QC

Field Blanks (FB): MYAP04 (in SDG MYANZ5).
Equipment Blanks (EB): MYANZ5, MYAP02, and MYAP03 (in SDG MYANZ5).
Background Samples (BG): None.
Field Duplicates: MYAP01 and MYAP05.

CLP PO Action

None.

Sampling Issues

1. Samples MYAP00 and MYAP01 were received with pH of three. No impact on sample results is anticipated since the laboratory adjusted the pH to less than two upon sample receipt.
2. Contamination above the contract required quantitation limit (CRQL) was found for iron in equipment blank MYAP03. No qualification is needed since result for the associated sample MYAP06 is greater than ten times the blank result.
3. Samples were shipped to the laboratory on June 20, 2019 and received at the laboratory on June 21, 2019, 2-3 days after collection on June 18 and 19, 2019.

Additional Comments

The samples were analyzed for Contract Laboratory Program (CLP) metals. Aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were analyzed by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES).

Instead of the 50 mL specified in the statement of work (SOW), 25 mL of sample MYAP05 and 10 mL of samples MYAP00, MYAP01, and MYAP06 were digested. The quantitation limits for these samples have been raised to account for the smaller volume used.

All standards and spiking solutions were analyzed before the expiration date.

This report was prepared in accordance with the following documents:

- USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration), ISM02.4, October 2016; and
- USEPA National Functional Guidelines for Inorganic Superfund Data Review, January 2017.

For technical definitions, refer to *Exhibit G (Glossary of Terms), USEPA Contract Laboratory Program Statement of Work for Inorganic Superfund Methods (Multi-Media, Multi-Concentration)*, ISM02.4.

II. VALIDATION SUMMARY

The data were evaluated based on the following parameters:

Parameter	Acceptable	Comment
1. Data Completeness	Yes	
2. Preservation and Holding Times	Yes	
3. ICP-MS Tune Analysis	N/A	
4. Calibration	Yes	
a. Initial	Yes	
b. Initial and Continuing Calibration Verification	Yes	
5. Laboratory Blanks	Yes	B
6. Field/Equipment Blanks	Yes	
7. ICP Interference Check Sample (ICS)	No	C
8. Laboratory Control Sample (LCS)	Yes	
9. Duplicate Sample Analysis	Yes	
10. Spike Sample Analysis	No	D
11. ICP Serial Dilution	No	E
12. ICP-MS Internal Standards	N/A	
13. Analyte Quantitation and CRQL	Yes	A
14. Field Duplicate Sample Analysis	No	F
15. Overall Assessment of Data	Yes	

N/A = Not Applicable.

III. VALIDITY AND COMMENTS

- A. Results above the method detection limit (MDL) but below the contract required quantitation limit (CRQL) are estimated and flagged "J." Results are considered qualitatively acceptable but quantitatively unreliable due to uncertainties in analytical precision near the quantitation limit.
- B. The following results are qualified as non-detected (U) due to low level initial calibration blank (ICB) and continuing calibration blank (CCB) contamination.
 - Cadmium in samples MYAP01 and MYAP05.
 - Cobalt in sample MYAP06.
 - Copper in preparation blank PBW01.

Analyte amounts greater than the MDL but less than or equal to the CRQL were reported in the following blanks at the concentrations presented below.

Analyte	Blank	Concentration, µg/L
Cadmium	ICB01	0.081
Cobalt	ICB01	0.23
Copper	ICB01/CCB02/CCB03	0.61/1.3/1.1

Sample results that are greater than or equal to the MDL but less than or equal to the CRQL are reported as non-detected (U) at the respective CRQL.

- C. The following detected results are estimated and flagged "J" because high concentrations of interferences in the samples may significantly impact quantitation.

- Arsenic and silver in all samples.
- Cadmium in samples MYAP00 and MYAP06.
- Lead in samples MYAP00, MYAP01, and MYAP05.
- Selenium in samples MYAP00 and MYAP01.

Iron (for arsenic, cadmium, selenium, and silver interference) and aluminum (for lead interference) are present in samples listed above at concentrations greater than the concentrations in ICS; the interference corrections calculated from iron and aluminum concentrations may impact quantitation of the associated metals. Detected results in the samples listed above are considered quantitatively uncertain.

- D. The following results are estimated and flagged “J-” or “UJ” because matrix spike recoveries are outside method QC limit.

- Antimony, lead, and selenium in all samples.

Matrix spike recoveries for analytes listed above in QC sample MYAP05S do not meet the 75-125% criterion for accuracy as presented below.

Analyte	% Recovery (%R)	Post-Digestion Spike, %R
Antimony	7	84
Lead	67	105
Selenium	73	95

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The post-digestion spike recoveries do not reflect the entire sample preparation and analysis; the impact on reported results cannot be determined. Qualification is based on the matrix spike recoveries only.

- E. The following results are estimated and flagged “J” or “UJ” because serial dilution results are outside method QC limit.

- Beryllium, cadmium, calcium, cobalt, lead, nickel, and zinc in all samples.

Percent differences for serial dilution analysis of MYAP05L do not meet the 10% difference criterion for the analytes presented below.

Analyte	% Difference
Beryllium	20
Cadmium	12
Calcium	11
Cobalt	11
Lead	28
Nickel	12
Zinc	11

These results may indicate poor laboratory technique or matrix effects which may interfere with analysis. The results are considered quantitatively uncertain. Chemical and physical interferences may exist due to sample matrix effects. Since cadmium, calcium, and cobalt results for the diluted sample are higher than the original, the reported results may be biased low. For other analytes listed above, the reported results may be biased high because results for the diluted sample are lower than the original results.

- F. Results for the following field duplicate pair do not meet the relative percent difference (RPD) criterion or the absolute difference criterion provided in the National Functional Guidelines (NFG) for laboratory duplicate, as presented below.

Analyte	MYAP01, µg/L	MYAP05, µg/L	RPD, %	QC Limit, %
Aluminum	596,000	363,000	48.6	20
Barium	4,760	3,420	32.8	20
Calcium	619,000	336,000	59.3	20
Chromium	415	289	35.8	20
Copper	538	331	47.6	20
Iron	423,000	323,000	26.8	20
Lead	155	125	21.4	20
Magnesium	190,000	152,000	22.2	20
Manganese	9,370	5,740	48.0	20
Nickel	310	217	35.3	20
Potassium	123,000	86,400	35.0	20
Sodium	186,000	135,000	31.8	20
Vanadium	794	579	31.3	20
Zinc	1,760	1,290	30.8	20

Analyte	MYAP01, µg/L	MYAP05, µg/L	Difference, µg/L	QC Limit, µg/L
Arsenic	39.9	28.0	11.9	10
Beryllium	17.7	10.3	7.4	5.0
Cobalt	276	182	94.0	50

DATA QUALIFIER DEFINITIONS FOR INORGANIC DATA REVIEW

The definitions of the following qualifiers are prepared according to the document, "National Functional Guidelines for Inorganic Superfund Methods Data Review," January 2017 (Table 1, page 6).

- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Sample Summary Report
