

In order to receive points under Section V, Criterion #2.B of this RFA, vehicles or equipment proposed for funding must be operated a majority of the time in one of the priority areas listed below. These areas were identified as priority locations for the DERA program because they are designated, as of the release date of this RFA, as Nonattainment Areas or Maintenance Areas for the following National Ambient Air Quality Standards. Data is sourced from EPA's Green Book of Nonattainment Areas for Criteria (<https://www.epa.gov/green-book>).

- a) PM2.5 1997 Standard (Annual: 15 µg/m3, 24-hour: 65 µg/m3)
- b) PM2.5 2006 Standard (Annual: 15 µg/m3, 24-hour: 35 µg/m3)
- c) PM2.5 2012 Standard (Annual: 12 µg/m3, 24-hour: 35 µg/m3)
- d) Ozone (O3) 2008 Standard (8-hour: 0.075ppm)
- e) Ozone (O3) 2015 Standard (8-hour: 0.070ppm)

A priority diesel PM area is a county that contains at least one census tract where the modeled ambient diesel PM concentration from the 2014 National Air Toxics Assessment (<https://www.epa.gov/national-air-toxics-assessment>) is above the 80th percentile (0.68 µg/m3) for census tracts nationwide. The 80th percentile is a programmatic cutoff designed to help us evaluate those areas that are most likely to have higher concentrations of diesel PM in the year of analysis (i.e., the year for which NATA data are available); this level was not chosen based on risk or other health-based criteria or thresholds. NATA is a screening tool and there are limitations and uncertainties associated with it; see: <https://www.epa.gov/national-air-toxics-assessment/nata-limitations>.
