

EPA's BEACH Report: Indiana 2012 Swimming Season

September 2013

EPA 820-F-13-030

Introduction

The Beaches Environmental Assessment and Coastal Health (BEACH) Act of 2000 authorizes EPA to provide grants to coastal and Great Lakes states, territories, and eligible tribes to monitor their coastal beaches for bacteria that indicate the possible presence of disease-causing pathogens and to notify the public when there is a potential risk to public health. The BEACH Act requires that recipients of those grants report their coastal beach monitoring and notification data to EPA. This fact sheet highlights the data submitted to EPA by the State of Indiana for the 2012 swimming season.

2012 Swimming Season Monitoring and Notification Actions

Indiana reports 25 beaches located in three counties. Indiana monitored 24 of these beaches during the 2012 swimming season (Figure 1 and Table 1). When monitoring results at swimming beaches show that levels of specific indicator bacteria in the water exceed applicable water quality standards, Indiana officials issue a beach advisory, warning people of possible risks of swimming or close the beach to public swimming until further monitoring finds that water quality complies with applicable standards.

How many beaches had notification actions?

In 2012, of the 24 coastal beaches that Indiana monitored 21 (88 percent) had at least one notification action (Figure 2).

Figure 1. Indiana coastal counties

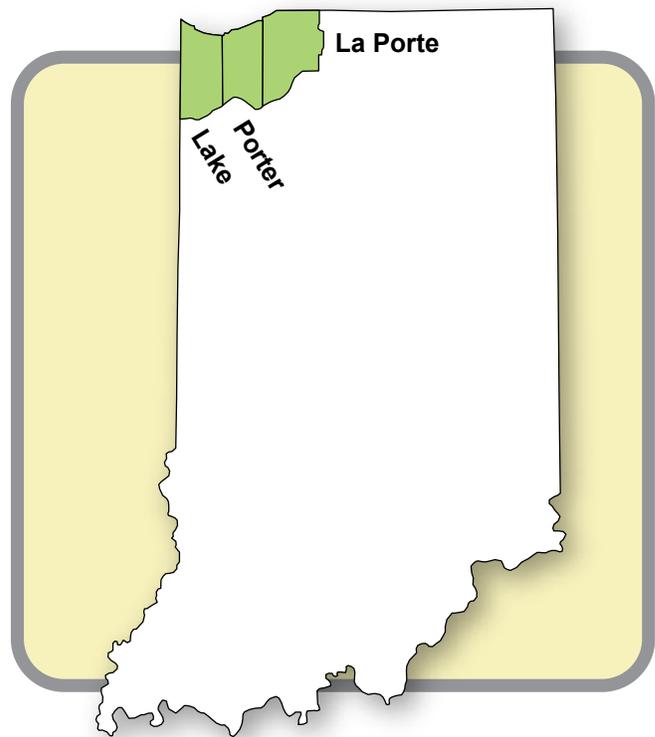

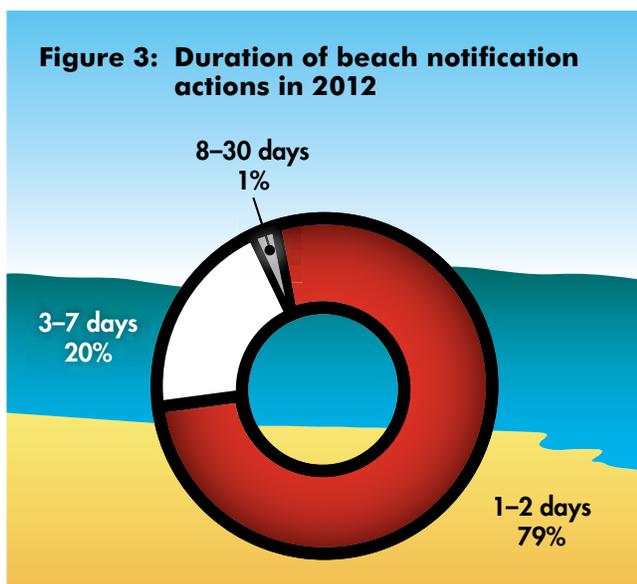

Table 1. Number of monitored and unmonitored coastal beaches by county for 2012

County	Total Beaches	Monitored	Not Monitored
LA PORTE	8	8	0
LAKE	10	10	0
PORTER	7	6	1
TOTALS	25	24	1

Figure 2: Percent of beaches with one or more notification actions

Figure 3: Duration of beach notification actions in 2012

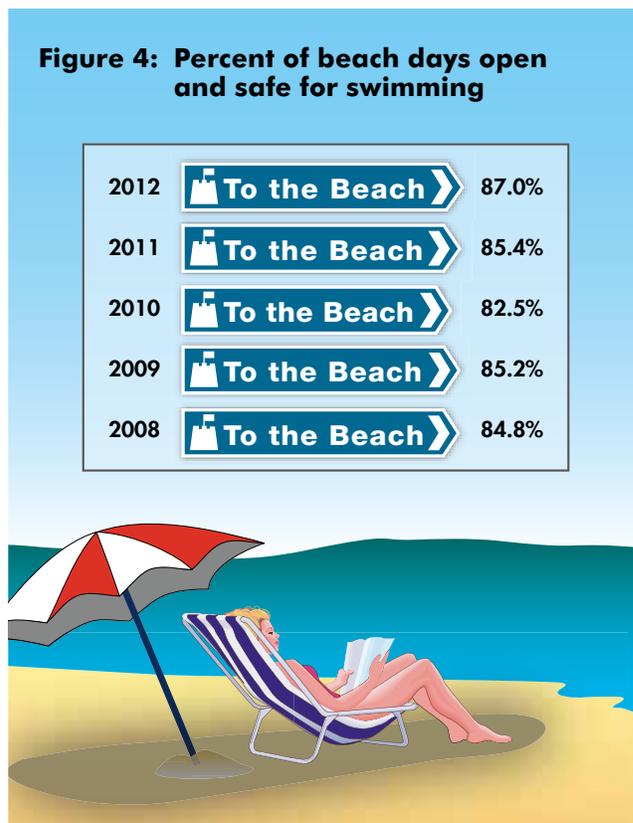

How many notification actions were issued and how long did they last?

Indiana issued 169 notification actions during the 2012 swimming season. Typically Indiana lifts an action when follow-up monitoring indicates that water quality complies with applicable standards. For the majority of actions (79 percent) water quality returned to normal and beaches were deemed safe for swimming within one or two days (Figure 3). Only rarely (one percent) did notification actions last more than a week.

What percentage of days were beaches under a notification action?

EPA calculates the total available beach days and the number of beach days with notification actions to better track trends over time. Total available

Figure 4: Percent of beach days open and safe for swimming

beach days are determined by multiplying the length of the beach season by the number of beaches in the state. For 2012 EPA calculated that 2,454 beach days were associated with the swimming seasons of the 24 monitored Indiana beaches. Indiana reported notification actions on 318 days, meaning that beaches were open and safe for swimming 87 percent of the time. This percentage is similar to previous years (Figure 4).
