

Manufacturer: Neopac  
Model: CR Nozzle Tip  
ASTM Type: IA

Description:  
This is a two piece plastic/plastic continuously threaded reclosable closure. This closure is designed for a nozzle tip tube (Figure 1).

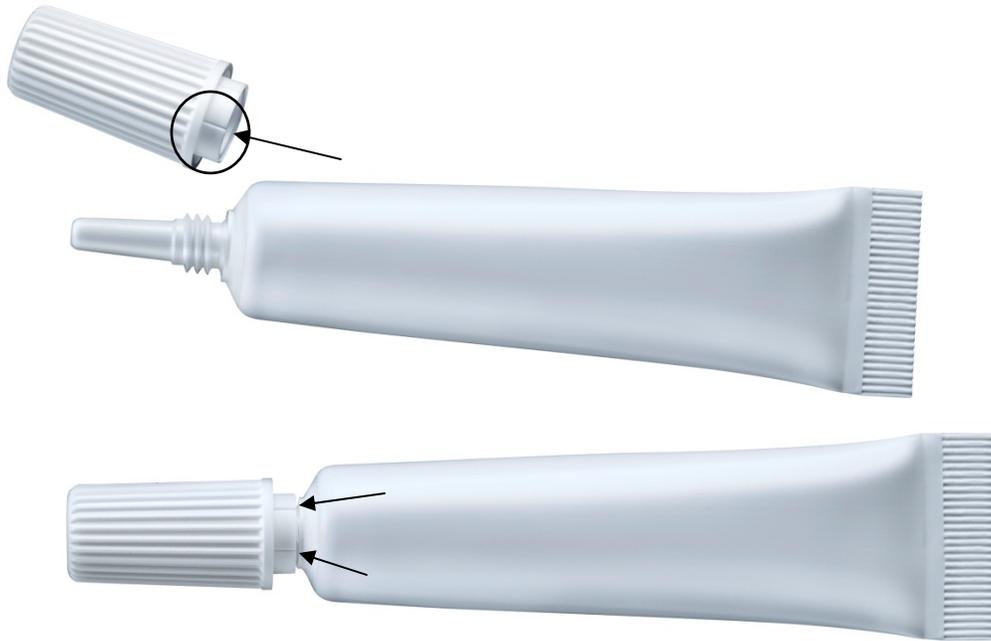

Figure 1

The closure is opened by pushing down on the closure and simultaneously turning it counterclockwise (see arrows in Figure 2).

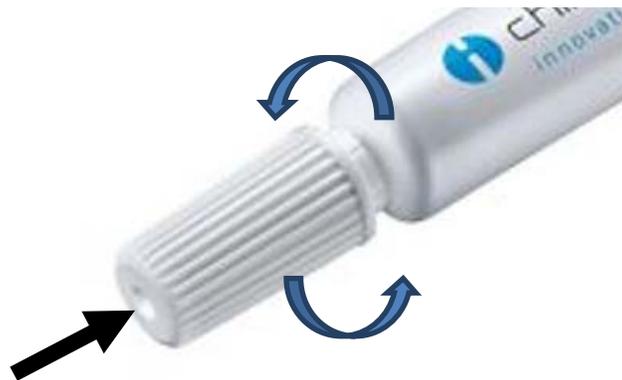

Figure 2

There is a male feature on the outer closure and a female feature on the inner closure. This locking feature is engaged when the outer closure is pushed down and turned counterclockwise and the male and female features lock together. This allows the closure to be opened.

The package is reclosed by turning the closure clockwise until it cannot be turned any further. This allows the closure to be in the child-resistant position. There are no manufacturer's instructions on the package.
