What do the colors mean?

A map of Ohio showing its 88 counties, each labeled with its name. The counties are colored based on population density according to the 2010 US Census. The colors range from light yellow (lowest density) to dark red (highest density). The map shows a clear trend where population density increases from the western and northern parts of the state towards the eastern and southern parts. Major urban centers like Cleveland, Columbus, and Cincinnati are located in the more densely populated eastern and southern regions.
