Apr 12, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. william gawne jr

Apr 26, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Colleen Belak

Apr 26, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. John Ortega

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Phyl Morello

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. jill kosikows

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Glen Zorn

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Carol Schneider

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. David Doubet

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Mary Lee Pifds

While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Marian Cooley

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. James R. Bartell

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Marlene Borton

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. melissa ritter

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. John Korovilos

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Ann Hamblet

Apr 25, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Carissa Lovett

Apr 25, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Leta Dally

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. April Huckstadt

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Michael Stavy

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Mark Messing

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Mary Kenny

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. James Dion

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Dr. Kent Powley

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Bernadette Payne

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Thomas Zajac

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Jody Gibson

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Holly O'Connor

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Mark M Giese

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Deborah Hare

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Tom Eisenhart

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Nancy Gehlhausen

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Lori Rodgers

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Jan Barshis

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Miss Leah Powley

While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Lynn E Jones

While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Chris Butkevicius

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Nancy Wedwow

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Mary Carr

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Marian Cruz

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Sunny Balsam

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. jan conley

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Carol Savary

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Mary McMahon

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Melissa McCool

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to come to a stop. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Dr. Elzbieta Foeller-Pituch

Apr 12, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to be stopped. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Ms. Katy Lemanski

Apr 12, 2013

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to be stopped. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Millie Brady

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to be stopped. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. Edward Mills

Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mrs. Margaret Weiner

While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.

The U.S. DOJ and the U.S. EPA should consider providing for steeper percentage reductions in the S.S. Badger's coal ash dumping over the next two years in order to have a stronger path towards compliance.

The S.S. Badger should provide monthly reporting of how much coal ash is being dumped into Lake Michigan, and that information should be made publicly available on an easily accessible website.

Thank you for your consideration of these provisions to strengthen and improve the proposed consent decree.

Sincerely,

Mr. David Atwood

Assistant Attorney General

Dear Attorney General,

For too long, the Lake Michigan Car Ferry, Inc.'s S.S. Badger ship has dumped too much coal ash into Lake Michigan. It's time for this pollution to be stopped. The S.S. Badger should clean up its operations and stop polluting our Great Lakes. While I understand the U.S. Department of Justice and U.S. Environmental Protection Agency's view that a consent decree may offer a quicker resolution to this pollution issue, I request that you consider the following ways of strengthening the proposed consent decree:

There should be an explicit agreement stated by both parties that they will not request any further extensions to the cessation of coal ash pollution by the S.S. Badger following the 2014 summer season.

The U.S. DOJ and the U.S. EPA should consider increasing the civil penalties for the S.S. Badger's continued pollution.
