

Proposed Criteria for Case Study Site Selection

Potential site selection criteria

Geographic and geologic diversity

Inerability of drinking water resources to quality and quantity impacts

Intensity and duration of injection activities, including hydraulic fracturing, in a particular location

Proximity of treatment facilities that accept hydraulic fracturing wastes

EPA requests your feedback

on the proposed criteria to select case study sites for our hydraulic fracturing study. If you have comments on unique characteristics of your region that EPA should consider when planning the study, or if you would like to recommend a particular location, please submit your comments

by email to hydraulic.fracturing@epa.gov
by placing them in the drop box located near the registration area
by mail to Jill Dean, 1200 Pennsylvania Ave. NW, Mailcode 4606M,
shington, DC 20460.
