Hi Alexia I hate to bother you again. Ken is ready to start pushing to have Pat and the OEA library moved. I need a status update on where we are...1. Is the main library ready to receive Pat's books...have the shelves in the back been cleared? 2. Is Pat ready to move...I need the priority list ASAP. I need to know what items most importantly need to go and what items are low priority. I would like to get a status update on both libraries next week if possible. We may only get a short notice for the move so we must be ready to go and knock it out.

August would be better since I will be on vacation for two weeks from July 12 to July 29. I need to meet with SEDS and contact PFC. Pfc has taken out of the sampling program some bundle wells due to non detect some years ago. The also shut down some extraction well as I understand it. I want to determine if there has been a rebound of VOCs. So SEDS needs to do sampling.

I am taking pore water sampling course at NArpm which will have a bearing on how we will have CFI monitor effectiveness of sedimite application.

Hi Meredith

Great course. One eye opening thing was indoor air with TCE at 2.1 ug/m^3 > can cause heart birth defects in first trimester. From a risk stand point for any woman of child bearing age in the work place is potentially at risk should they become pregnant under conditions Exceeding threshold. It's a big liability for companies even if the source is not on their site. companies should monitor air continuously or every 27 days to make sure indoor air are below the concentration. I will ask our risk assessors more about this. Lots of great take aways in this course.
