BEFORE THE ADMINISTRATOR
UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

In the Matter of the Title V
Operating Permit No. AQM-001/00016
Issued to
Dow Reichhold Specialty Latex, LLC

Pursuant to Section 505(b)(2) of the Clean Air Act ("Act"), 42 U.S.C. § 7661d(b)(2), and 40 C.F.R. § 70.8(d), the Clean Air Council ("Council" or "Petitioner") hereby petitions the Administrator ("Administrator") of the United States Environmental Protection Agency ("EPA") to object to issuance of the Title V Operating Permit ("permit") for Dow Reichhold Specialty Latex, LLC ("Reichhold"), Permit No. AQM-001/00016. EPA should object to this permit because: 1) the permit does not require an adequate compliance schedule; 2) the permit does not require adequate monitoring or prompt notification; and 3) Reichhold has emitted ammonia from its facility after the close of the comment period on this permit.

This petition is filed within sixty days following the expiration of the EPA’s 45-day review period, as required by Section 505(b)(2) of the Act. See 42 U.S.C. § 7661d(b)(2). The Administrator must grant or deny this petition within sixty days after it is filed. Id.

In compliance with Section 505(b)(2) of the Act, this petition is based on comments submitted by Reichhold to the Delaware Natural Resources and Environmental Control Authority ("DNREC") during the public comment period, which ended September 9, 2002. Additionally, the petition relies on information made public by DNREC after the close of the public comment period. Petitioner is entitled to base this petition on such information because it would have been
impracticable to raise the following objections during the public comment period, and grounds for such objections arose after the comment period ended. See 42 U.S.C. § 7661d(b)(2).

I. Parties

The Council is a member-supported, non-profit environmental organization dedicated to protect everyone’s right to breathe clean air. Founded in 1967, the Council is the oldest member-supported environmental organization in the Mid-Atlantic region. The Council works through public education, community advocacy, and government oversight to ensure enforcement of environmental laws. The Council has members who live, work, recreate, and breathe air in the state of Delaware and throughout the Mid-Atlantic region.

The Mid-Atlantic Environmental Law Center ("MAELC") represents the Council in this matter. MAELC is a not-for-profit environmental law firm that provides legal services to individuals and public interest organizations in environmental matters. MAELC works to ensure that environmental requirements are met, and that legislation and regulations are adequately implemented by responsible federal, state and local agencies. MAELC is located at Widener University School of Law and works in tandem with students in Widener’s Environmental and Natural Resources Law Clinic.

II. Basis for Objection

The Council requests the Administrator object to the final permit for Reichhold because it does not comply with 40 C.F.R. Part 70 and the Clean Air Act. In particular:

1) In contravention of 40 C.F.R. 70.5(c)(8), Reichhold’s permit does not provide an adequate compliance schedule;
2) Reichhold’s permit does not require adequate monitoring and prompt notification according to 42 U.S.C. § 7661c and 40 C.F.R. Part 70; and
3) An ammonia release has occurred at Reichhold’s facility since the close of the public comment period.

If EPA determines that a permit does not comply with legal requirements, it must object to its issuance. See 40 C.F.R. 70.8(c)(1) ("The Administrator will object to the issuance of any
proposed permit determined by the Administrator not to be in compliance with applicable requirements of this part.”) The significant violations discussed herein require the Administrator to object to the permit issued by DNREC.

A. In Contravention of 40 C.F.R. 70.5(c)(8), Reichhold’s Permit Does Not Provide an Adequate Compliance Schedule.

The Code of Federal Regulations (“Part 70”) requires Title V permits have a compliance schedule. 40 C.F.R. 70.5(c)(8)(iii). The Act defines a “schedule of compliance’” as a “schedule of remedial measures, including an enforceable sequence of actions or operations, leading to compliance with an applicable implementation plan, emission standard, emission limitation, or emission prohibition.” 42 U.S.C. § 7661(3). However, according to Condition Five of Reichhold’s permit, no compliance schedule has been included. See Regulation No. 30 (Title V) Operating Permit No. AQM 001/00016, Condition 5, page 170. This is in direct violation of both Part 70 and the Act.

The need for such a schedule is shown not only by the regulation, but also by a recent ammonia release. On October 29, 2002, Reichhold released at least 100 pounds of ammonia. See DNREC Online: Environmental Releases (Attached as Exhibit A). This release was classified as extremely hazardous by DNREC. Id. By omitting the required compliance schedule, Reichhold may continue to violate clean air laws without consequence. This is not consistent with the Act’s purpose – “to protect and enhance the quality of the Nation’s air.” See 42 U.S.C. § 7401(b)(1).

Moreover, during the comment period, Reichhold specifically requested the Leak Detection and Repair requirements “be revised to include: ... [a] compliance schedule and reporting requirements of [40 C.F.R. Part 63] Subpart U.” See Comment 13, Reconciliation of Reichhold, Inc. Draft Permit Comments (Feb. 13, 2001). But, DNREC replied, “[n]o compliance schedule was required for Subpart U.” Id. Reichhold’s recent hazardous ammonia release demonstrates how vital a compliance schedule is to a Title V Operating Permit. Since Reichhold’s permit fails to incorporate a compliance schedule, the
Administrator should object to the permit because it fails to comply with proper legal requirements.

**B. Adequate Monitoring, Reporting and Recordkeeping Requirements are Needed in the Permit.**

Adequate monitoring and prompt notification are essential to a Title V permit because, without these, states and the public cannot know whether a facility is complying with air quality and public health protections. The law is clear in this area, “each permit issued under [Title V] shall set forth inspection, entry, monitoring, compliance certification, and reporting requirements to assure compliance with the permit terms and conditions.” See 42 U.S.C. § 7661c(c). Moreover, prompt reporting of violations is one of the main objectives of the Act’s facility permitting: potentially dangerous illegal pollution or operational problems must be promptly reported to a responsible agency; the agency can then determine the response, ranging from further evaluation to immediate action. Part 70 requires that Title V permits include “[p]rompt reporting of deviations from permit requirements, including those attributable to upset conditions as defined in the permit, the probable cause of such deviations, and any corrective action or preventive measures.” 40 CFR §70.6(a)(3)(iii)(B).

Although Reichhold did request that reporting requirements be included under Leak Detection and Repair, it objected to the “extensive monitoring recordkeeping requirements of Emission Unit 1 and Section C of Emission Unit No. 2” considering these requirements “overly burdensome and unnecessary.” See Comment 4, Reconciliation of Reichhold, Inc. Draft Permit Comments (Feb. 13, 2001).

Reichhold’s recent violation in 2002 shows that more frequent monitoring, reporting and recordkeeping requirements in the permit are needed to assure compliance with federal and state air regulations. The permit mandates Reichhold submit “any required monitoring not later than … the first day of February (covering the period July 1 through December 31).” See Regulation No. 30 (Title V) Operating Permit No. AQM 001/00016, Condition 3(c)(2)(i), page 20. Here, more
frequent monitoring is needed for Emission Units 1 and 2 to provide data to ensure compliance. Leak Detection Systems or other monitoring should be required to identify leaks when they occur. Semi-annual monitoring reports are not sufficient to demonstrate compliance. EPA interim Rules state that infrequent monitoring (e.g. quarterly monitoring) is likely insufficient for demonstrating compliance with an hourly emission limit. 67 Fed. Reg. 58529-36, (Sept. 17, 2002). Therefore, the Administrator should object to issuance of the permit.

C. Reichhold Violated the Act By Its Release of Ammonia.

On October 29, 2002, Reichhold released 100 pounds of ammonia into the air, which created an extremely hazardous situation. See DNREC Online: Environmental Releases (Exhibit A). When such a chemical is emitted into the air, the vapors may cause the eyes and respiratory tract to become irritated. Id. If a person comes in direct contact with the ammonia, the skin and eyes may burn. Id. Moreover, if the fumes of the chemical are inhaled, it may be fatal. Id.

This release took place after the comment period closed on the permit, so Petitioner could not have raised the ammonia problem at that time.

IV. Conclusion

In light of the permit’s failure to require a compliance schedule, its failure to require adequate monitoring and reporting, and because a violation has occurred since the public comment period ended, the Administrator should object to the Title V permit.
