

| Information on the Various Types of Spray Polyurethane Foam Products | | | | | |
|--|--|---|--|--|--|
| | Two-component High-Pressure | Two-component Low-Pressure | One Component Foam (OCF) | | |
| SPF Types | | | | | |
| | Open-Cell (low density, half lb.) Closed-Cell (medium density, 2 lb.) Closed-Cell (high density, 3 lb.) | | | | |
| Uses | Larger insulation applications; Air sealant in hybrid insulation installation with fiberglass or other insulation material Roofing applications (Closed-Cell, high density, 3 lb.) | Air sealant; Adhesive; Smaller insulation applications; Weatherization activities | Sealant for filling cracks, holes, gaps, and crevices: • Around windows and doors; • For sealing up small gaps (0.5" - 3") in a building to create an energy efficient building envelope This product is inappropriate for "creative" uses such as science or art projects and should not be used around children. | | |
| Applicator | Professional Installer | Professional Installer; Weatherization worker; Available for do-it-yourself applicators, but the same precautions should be taken as with professional-use. DIY applicators are often unaware of inhalation and dermal hazards and may not have adequate knowledge, training and experience to wear adequate personal protective equipment. | Professional Installer; Weatherization worker; Available for do-it-yourself applicators but note that the same precautions should be taken as with professional-use | | |
| Container Size | 55 gallon drum containers | Typically three to five gallons per container from the system house, but can be purchased in larger containers over the internet or in some retail markets | Available in retail and hardware stores nationwide in a variety of sizes ranging from 12 oz. to 24 oz. cans | | |

| | Ventilation and containment practices should be considered to control chemical exposures. Work in | | | | | |
|---------------------------|---|--|---|--|--|--|
| | "permit-required" confined spaces as defined by OSHA, which may include work in attics and crawl | | | | | |
| | spaces, requires entry procedures, including an entry permit, and training for the workers. | | | | | |
| Engineering | OSHA requires a hierarchy of s | antrals under which ampleyers mus | t first implement angineering centrals | | | |
| Controls | OSHA requires a hierarchy of controls, under which employers must first implement engineering controls where feasible. Consult the safety data sheet for additional guidance on the use of Personal Protective Equipment (PPE) and Respiratory Protection when the use of engineering controls are not feasible or | | | | | |
| | | | | | | |
