What is Climate Change?

Image source: tn173.com

Sources of green house gases in California

Fuentes del calentamiento global

How are climate change and health related?

Rising temperatures

- 
- Heat-related illnesses
 - Cardiovascular stress
 - Kidney stones
 - Breathing problems
 - Injuries
 - Premature death

A photograph of a dry, cracked landscape. The ground is parched and split into a mosaic of irregular, polygonal shapes. In the foreground, several dark, leafless, and skeletal tree branches are scattered across the cracked earth. The background shows a flat, arid plain extending to a distant horizon under a clear, pale blue sky. The overall scene conveys a sense of severe drought and environmental hardship.

Drought

- 
- Hunger
 - malnutrition
 - Food- and water-borne disease
 - Emergence of new contagious and vector-borne disease

Wildfires

- 
- Injuries and death from burns and smoke inhalation
 - Respiratory, cardiovascular, and pulmonary disease exacerbation
 - Increase of allergies and asthma
 - Breathing problems

Air Pollution

- Respiratory, cardiovascular, and pulmonary disease exacerbation
- Increase of allergies and asthma
- Breathing problems

A satellite image of a tropical cyclone, showing a well-defined eye and a dense, swirling cloud structure over the ocean. The text "Extreme Weather" is overlaid in the center of the image. The surrounding area shows other cloud formations and the dark blue of the ocean. The text is in a bold, black, sans-serif font.

Extreme Weather

- 
- **Population displacement**
 - **Death from drowning**
 - **Injuries**
 - **Damage to potable water, waste water, and irrigation systems**
 - **Water-and food-borne diseases**

What can I do?

What will happen?

**Are we still in time to
do something?**

Who can rescue us now?

Questions?

Thank you!
