

**Preliminary Information on Manufacturing, Processing,
Distribution, Use, and Disposal:**

1,4-Dioxane

CASRN: 123-91-1

February 2017

Support document
for Docket EPA-HQ-OPPT-2016-0723

This document provides a preliminary public summary of available information collected by EPA's Office of Pollution Prevention and Toxics (OPPT) in the Office of Chemical Safety and Pollution Prevention (OCSPP) on the manufacturing (including importing), processing, distribution in commerce, use, and disposal of this chemical. This is based on existing data available to EPA, including information collected under the Chemical Data Reporting rule, Toxics Release Inventory (if available), information from other Agency databases, other U.S. Government agencies, publicly available information from states, and a review of published literature. In addition, the document includes information reported to EPA by producers and users of the chemical in the United States and in other countries.

This preliminary use information and any additional use information received in the docket by March 15, 2017 will inform efforts to develop the scope of the chemical risk evaluation required under section 6(b)(4) of the Toxic Substances Control Act, and will inform any risk management efforts following risk evaluation.

Mention of trade names in this document does not constitute endorsement by EPA. To verify products or articles containing this chemical currently in commerce, EPA has identified several examples. Any lists are provided for informational purposes only. EPA and its employees do not endorse any of the products or companies.

This document does not contain confidential business information (CBI).

Docket: EPA-HQ-OPPT-2016-0723

MANUFACTURING, PROCESSING, DISTRIBUTION, USE AND DISPOSAL

1. Manufacturing (Including Importing)

For the 2012 Chemical Data Reporting (CDR) period, data reported indicate that there was one domestic manufacturer of 1,4-dioxane; this manufacturer claimed the production volume as confidential¹. No importers reported in 2012. For the 2016 CDR period, data reported indicate that there was one domestic manufacturer and one importer².

For the 2015 Toxics Release Inventory (TRI), 49 facilities reported manufacturing, processing, or otherwise using 1,4-dioxane³. Of these, 25 sites reported manufacture in the United States, 0 reported import, 13 reported processing, and 21 reported other uses (some sites reported in multiple categories)⁴. A total of 4,224,670 lbs. of production-related waste was reported.

¹ Manufacturers (including importers) are required to report under CDR if they meet certain production volume thresholds, generally 25,000 lb or more of a chemical substance at any single site. Reporting is triggered if the annual reporting threshold is met during any of the calendar years since the last principal reporting year. In general, the reporting threshold remains 25,000 lb per site. However, a reduced reporting threshold (2,500 lb) now applies to chemical substances subject to certain TSCA actions. <https://www.epa.gov/chemical-data-reporting/how-report-under-chemical-data-reporting>

² Manufacture in the context of CDR means to manufacture, produce, or import for commercial purposes. Manufacture includes the extraction, for commercial purposes, of a component chemical substance from a previously existing chemical substance or complex combination of chemical substances. (40 CFR 711.3)

https://www.epa.gov/sites/production/files/2015-12/documents/cdr_fact_sheet_importers_final_dec2015_0.pdf

Similarly, the term “manufacture” in the context of TRI means to produce, prepare, compound, or import an EPCRA Section 313 chemical. The term “manufacture” also includes coincidental production of an EPCRA Section 313 chemical (e.g., as a byproduct or impurity) as a result of the manufacture, processing, otherwise use or disposal of another chemical or mixture of chemicals. <https://www.epa.gov/sites/production/files/documents/ry2012rfi.pdf>

³ A facility must report to the TRI program if it meets all three of the following criteria: 1) is in a specific industry sector, 2) employs 10 or more full-time equivalent employees, and 3) manufactures, processes, or otherwise uses a [TRI-listed chemical](#) in quantities above applicable threshold levels for a given chemical in a given year. <https://www.epa.gov/toxics-release-inventory-tri-program/basics-tri-reporting>

⁴ The term "process" in the context of CDR and TRI means the preparation of a chemical substance or mixture, after its manufacture, for distribution in commerce—

(A) in the same form or physical state as, or in a different form or physical state from, that in which it was received by the person so preparing such substance or mixture, or
(B) as part of an article containing the chemical substance or mixture.

<http://uscode.house.gov/view.xhtml?path=/prelim@title15/chapter53&edition=prelim>

The term “otherwise use” under TRI means any use of an EPCRA Section 313 chemical, including an EPCRA Section 313 chemical contained in a mixture or other trade name product or waste, that is not covered by the terms manufacture or process. See the definition of “otherwise use” for additional details on applicability of otherwise use with regard to disposal, stabilization, and treatment for destruction. https://www.epa.gov/sites/production/files/2016-01/documents/ry_2015_tri_reporting_forms_and_instructions.pdf

Manufacturing Process

According to the Agency for Toxic Substances and Disease Registry (ATSDR), 1,4-dioxane is typically manufactured by dehydration and ring closure of diethylene glycol in a closed system.

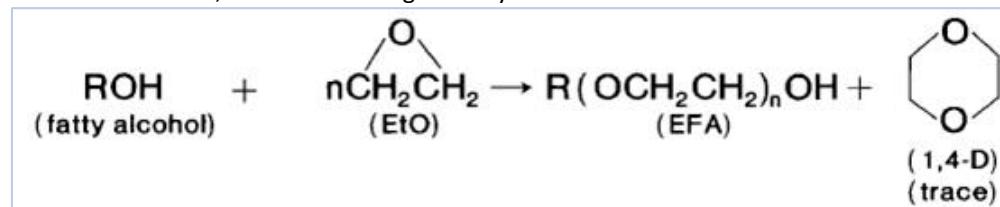

<https://www.atsdr.cdc.gov/toxprofiles/tp.asp?id=955&tid=199>

Concentrated sulfuric acid is used as a catalyst, although phosphoric acid, *p*-toluenesulfonic acid, and strongly acidic ion-exchange resins are recognized alternatives. Operating conditions vary; temperatures range from 130 to 200 °C and pressures range from a slight pressure to a partial vacuum (25 – 110 kPa). The process is continuous, with dioxane vaporized from the reaction vessel. The vapors are passed through an acid trap and two distillation columns to remove water and to purify the product. Yields of *circa* 90% are possible. 2-Methyl-1,3-dioxolane, acetaldehyde, crotonaldehyde, and polyglycol are unwanted byproducts. Dioxane can also be prepared by dehydrohalogenation of 2-chloro-2'-hydroxydiethyl ether, by reacting ethylene glycol with 1,2-dibromoethane, and by dimerizing ethylene oxide either over sodium hydrogen sulfate (NaHSO₄), silicon tetrafluoride (SiF₄), or trifluoroborane (BF₃), or at elevated temperature with an acidic cation-exchange resin (Ullmann's Encyclopedia of Industrial Chemistry, p. 311.)

1,4-dioxane can also occur as an impurity, either as a residue or as a result of a chemical reaction. As described in Australia's Priority Existing Chemical Report on 1,4-dioxane, it may be present as a residue if used in the reaction medium during manufacture (e.g., of a flame retardant) or as a solvent during purification. 1,4-dioxane may also be formed as a reaction by-product, particularly in chemicals which are produced by ethoxylation. These include alkyl ether sulphates (anionic surfactants) and other ethoxylated substances, such as alkyl, alkylphenol, and fatty amine ethoxylates; polyethylene glycols and their esters; and sorbitan ester ethoxylates. Uses of these chemicals include food, cosmetic, agricultural/veterinary, therapeutic, household and varied industrial applications.

(https://www.nicnas.gov.au/chemical-information/pec-assessments?result_34791_result_page=@).

The Formation of 1,4-Dioxane Through Ethoxylation

Ref. NICNAS: https://www.nicnas.gov.au/chemical-information/pec-assessments?result_34791_result_page=@

2. Processing

Processing and use activities are not well-characterized outside of information from TRI and from ECHA, the European Chemicals Agency: <https://echa.europa.eu/substance-information-/substanceinfo/100.004.239>

For the 2015 TRI reporting year, the following types of facilities reported processing 1,4-dioxane to the

- Other Basic Inorganic Chemical Manufacturing (NAICS 325180)
- All Other Basic Organic Chemical Manufacturing (NAICS 325199)
- Surface Active Agent Manufacturing (NAICS 325613)
- All Other Plastics Product Manufacturing (NAICS 326199)
- Cement Manufacturing (NAICS 327310)
- Abrasive Product Manufacturing (NAICS 327910)
- Roofing, Siding, and Insulation Material Merchant Wholesalers (NAICS 423330)
- Hazardous Waste Treatment and Disposal (NAICS 562211)

A 2002 European Union Risk Assessment Report on 1,4-dioxane found little information available on formulation processes. The report assumed that the activities performed during formulating a product were adding of the substance to a mixture, mixing and finally drumming or bagging of the product. In developing the exposure models used in the 2002 assessment, it was assumed that the formulation of paints, lacquers and cleaning agents is performed at room temperature, while the production of plastics is generally done at approximately 240°C. The report further assumed that the mixing process for plastic is in a closed system, while mixing of paints, lacquers and cleaning agents occurs in an open system. <https://echa.europa.eu/documents/10162/a4e83a6a-c421-4243-a8df-3e84893082aa>

3. Products and Articles

The State of Washington has received reports of children's' products that contain 1,4-dioxane as a contaminant, including bath/pool toys, dolls, clothing, and blankets.

<https://fortress.wa.gov/ecy/cspareporting/>

EPA has identified the following examples of products in commerce. This list is provided for informational purposes only. EPA and its employees do not endorse any of the products or companies.

Trade name	Use of the Product	% by weight or ppm/ppb	Link to references, SDS or industry information
Lumigen ECL Plus Chemiluminescent Reagent (Lumigen Ps-3)	Chemiluminescent reagent	50 – 60%	http://www.lumigen.com/sites/default/files/Additional%20documents/ps3-100-msdsc-ps3-100_english.pdf

4. Distribution (Includes Retailers)

1,4-dioxane is generally available to industrial and laboratory users through chemical distributors and is also available online. Based on information reported to TRI for 2015, 4 facilities manufacture 1,4-dioxane for sale or distribution and one facility reported processing 1,4-dioxane under the NAICS Code 423330, Roofing, Siding, and Insulation Material Merchant Wholesalers. Based on information reported to CDR for 2016, 2 facilities manufacture 1,4-dioxane for wholesale and retail trade.

5. Uses

Industrial

1,4-dioxane has a variety of industrial uses. Depending on the specific processes involved, industrial users of 1,4-dioxane may also be processors of 1,4-dioxane.

- Solvent for cellulose acetate, ethyl cellulose, benzyl cellulose, resins, oils, waxes, and fats
- Used in spectroscopic and photometric measurements
- In the pulping of wood
- Wetting and dispersing agent in textile processing
- Degreasing agent
- Polymerization catalyst
- Component of polishing compositions, dye baths, lacquers, paints, varnishes, stains, printing compositions, and paint and varnish removers
- Used in the production of adhesives, cements, deodorant fumigants, cosmetics, drugs, cleaning preparations, magnetic tape, plastic, rubber, insecticides, and herbicides

- Used as a chemical intermediate:
 - Dioxane reaction products are useful as insecticides, herbicides, plasticizers, and monomers
 - Oxonium complexes of dioxane with salts, mineral acids, halogens, and sulfur trioxide are used as catalysts and as reagents for anhydrous acid reactions, brominations, and sulfonations
- Used in the purification of pharmaceuticals
- Used in the extraction of animal and vegetable oils
- Used in the laboratory:
 - in the preparation of histological sections for microscopic examination
 - as a liquid scintillation counting medium
 - as a cryoscopic solvent for molecular mass determinations
 - as a stable reaction medium for diverse reactions

Facilities reporting to the Toxics Release Inventory (TRI) in 2015 for 1,4-dioxane use include facilities in the following sectors:

- Other Basic Inorganic Chemical Manufacturing (NAICS 325180)
- All Other Basic Organic Chemical Manufacturing (NAICS 325199)
- Plastics Material and Resin Manufacturing (NAICS 325211)
- Pesticide and Other Agricultural Chemical Manufacturing (NAICS 325320)
- Pharmaceutical Preparation Manufacturing (NAICS 325412)
- Photographic Film, Paper, Plate, and Chemical Manufacturing (NAICS 325992)
- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS 325998)
- Cement Manufacturing (NAICS 327310)
- Abrasive Product Manufacturing (NAICS 327910)
- All Other Miscellaneous General Purpose Machinery Manufacturing (NAICS 333999)
- Hazardous Waste Treatment and Disposal (NAICS 562211)
- Solid Waste Combustors and Incinerators (NAICS 562213)

Commercial and Consumer Uses

It is unlikely that 1,4-dioxane is intentionally used in formulations of currently available commercial and consumer products, with the exception of the laboratory uses noted above and the possible exception of film cement. However, many commercial and consumer products that have been reported to contain 1,4-dioxane in small amounts. These include commercial and consumer products that contain alkyl ether sulphate surfactants or other ethoxylated substances in which 1,4-dioxane may be present as an unintended residual contaminant. In addition, 1,4-dioxane may be present as a residue from use during formulation of these products.

<http://www.fda.gov/Cosmetics/ProductsIngredients/PotentialContaminants/ucm101566.htm>

<http://www.ecy.wa.gov/programs/hwtr/rtt/cspa/chcc.html>

https://www.nicnas.gov.au/chemical-information/pec-assessments?result_34791_result_page=@

A process called “vacuum stripping” may be used to remove 1,4-dioxane from ethoxylated compounds at the end of the polymerization process. The FDA has provided guidance on how to minimize the presence of 1,4-dioxane in products using this process.

<http://www.fda.gov/Cosmetics/ProductsIngredients/PotentialContaminants/ucm101566.htm>

6. Disposal of Waste and Recycling/Recovery

Under the Resource Conservation and Recovery Act (RCRA), 1,4-dioxane is a listed hazardous waste. See 40 CFR 261.33 - *Discarded commercial chemical products, off-specification species, container residues, and spill residues thereof*.

For 2015, seven facilities in the Hazardous Waste Treatment and Disposal (NAICS 562211) sector and one facility in the Solid Waste Combustors and Incinerators (NAICS 562213) sector reported to TRI for 1,4-dioxane. According to TRI, in 2015, 0.68 million pounds of 1,4-dioxane were disposed of or released, of which 70 percent was disposed of or released off-site.

USEFUL TYPES OF INFORMATION

This document presents a summary of information currently available to EPA on this chemical. To more fully characterize the manufacturing, processing, distribution, disposal, and use of this chemical, and to inform the development of the scoping document for this chemical, EPA is interested in obtaining information on:

- the functional uses for this chemical;
- what types of products contain this chemical;
- which industry sectors use this chemical;
- what volume of the chemical is used;
- which uses have been discontinued or phased out;
- exposure scenarios for this chemical; and
- in which articles this chemical is found.
