MicroTurbine Applications for the Offshore Oil and Gas Industry

May 2008

What is a MicroTurbine?

Power generator driven by a small scale gas turbine

- Efficiency of 26-33%
- Combined with CHP can achieve efficiency of 80%+
- Wide range of fuels – 350 btu to 2500 btu
  - Up to 7% H₂S
- Extremely Low Emissions - <9 ppm
- Low Maintenance Cost
- High Availability Rate
Simple: One Moving Part

One moving part: TurboGenerator shaft

- Air bearings
  - No oil or lubricants
- Air cooled
  - No anti-freeze or coolants
- Proven reliability
  - >18 million hours of operation
- Variable speed from 45,000 to 96,000 RPM
Power Electronics

- “Electronic” Gearbox
- No moving parts
- Variable Voltage 400-480 volts
- Variable Frequency 10-60 Hz
- Voltage & Current source Inverter
- Built in Fault protection

Inverter Based Electronics
4th-Generation Power Electronics

Engine Control Module
- All digital DSP control
- Controls turbine operation
- Wide speed control range
- Sensorless generator control
- Small and lightweight
- Built in dynamic brake
- Built in system power supply
- Air cooled

Battery Control Module
- All digital DSP control
- Transient power control
- Bi-directional power control
- Manages battery charge/health

Load Control Module
- All digital DSP control
- Built in neutral
- Built in protective relays
- Built in synchronization
- Built in paralleling capability
- Grid Connect or Stand Alone
- No transformer required
- 100 kVA rating
- Air cooled
- IEEE 519 compliant
- UL 1741 certified
- NY & CA state certified for direct-to-grid interconnection

Regulated DC Bus

Preventative Maintenance

Resource Recovery Case Study:
BP Offshore Platform

The Issues:
- Provide a reliable power source in a hazardous oil and gas application on an offshore platform in the Gulf of Mexico
- Recover value from onsite flare gas which is normally lost to the environment

The Solution:
- A Capstone microturbine, UL certified for hazardous oil and gas applications
- The microturbine runs on onsite unprocessed wellhead gas which is normally flared, providing a power source to the platform
- The microturbine cut maintenance time by ~95% compared to reciprocating engine generators
- The microturbine ran almost non-stop for 25,000 hours
- Capstone has microturbines running on other platforms in the Gulf of Mexico, Gulf of Alaska, Bay of Campeche, the North Sea, Mediterranean Sea, and South China Sea
Offshore Platform Installations

Current installations:
- Gulf of Mexico
- Gulf of Alaska
- North Sea
- South China Sea
- Persian Gulf

Units on Chevron platforms in the Gulf of Mexico
BP platform in Gulf of Mexico
Conoco platform in North Sea
Unocal platform in Gulf of Alaska

Environmentally Sensitive

- Due to air bearings, there are no lubricants to store or maintain on site.
  - No Filters, Coolers, or Pumps to maintain.
- Due to the air cooling, there are no coolants to store or maintain on site.
  - No Coolers or Pumps to maintain.

No Leaks, Drips, Pigs, or Pads

1999: Platform in Gulf of Mexico to use untreated casing gas to fuel a Capstone MicroTurbine
Offshore Platform Installations

Deployed in the Gulf of Mexico

Offshore Enclosure

- Fabricated from 316 SS
- Enclosure pressurized with (2) blowers (explosion proof motors)
- Gas Detection (1) with external calibration connection
- Space Heaters (3) for moisture protection
- Heat Detection
- CID2 MicroTurbine controller for safety functions
- UL Certified
Uses for Methane Reduction

- **Primary objective is to burn the fuel**
  - Electric Power and Heat Energy are side benefits

- **Fuel from flare gas**
  - Associated gas from oil production
  - Boil off gas from condensate collection
  - Packing vents from recip compressors

Fuel Gas Requirements

- **High Pressure Applications**
  - C30
    - 50 psi Supply Pressure
    - 325-2100 BTU
    - 7% H2S
  - C65, C200, C1000
    - 75 psi Supply Pressure
    - 375-2500 BTU
    - 0.5% H2S

- **Low Pressure Applications**
  - 0 PSI Supply Pressure
  - No H2S
  - 600-1800 BTU
Exhaust Heat Utilization

Microturbines also generate voluminous exhaust heat
• C65 Generates 561,000 BTU/hr (591,000 kJ/hr) at 588F (309C)

Exhaust Heat Utilization

Auxiliary Compression Station Power
• Dominion Transmission, VA
• Three C30s provide prime power
• Exhaust heat for fuel gas pre-heat, building heat, amine, and hot water
• Six other Dominion Transmission compressor stations currently run C60s
Benefits of MicroTurbines in O&G

**Wide Range of Fuels**
- 350-2700 BTU (Flare Gas)
- As low as 32% Methane
- Sour gas with H₂S – up to 7%

**Higher Availability**
- 99% Reliability
  - 15,000 Hours MTBF
- 99% Availability
  - 6 Hours/Yr Planned Maintenance

**Lower Maintenance Cost**
- $0.016 per kw/hr Parts & Labor

Benefits of MicroTurbines in O&G

**Low Installed Cost**
**Short Commissioning Period**
- < 8 Hours for commissioning

**Ease of Operations**
- “Big turbine” style controls

**No Lubricants or Coolants**
- Nothing to drip

**Small Footprint, Light Weight**
- 30% less than recips

**< 65dBA Acoustic Emissions**

**Ultra-low NOx emissions with no post-combustion devices or chemicals**

Test prior to platform deployment, Netherlands
Conclusions

- Ideal power generation for oil & gas installations, onshore and offshore
  - More than 5,000 Capstone MicroTurbines sold and 18 million operating hours
  - Gas from 350 BTU – 2500 BTU with up to 7% H2S
  - Small footprint & light weight
  - Lowest maintenance cost of 0.016 $/kWh with 6 hours/year of planned maintenance
  - No lubricants or coolants
