Re: August 30, 2017 Fuel Waiver Concerning Conventional and Reformulated Gasoline in Alabama, Georgia, Kentucky, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, Texas, Louisiana, Florida and the District of Columbia

Dear Governors and Mayor Bowser:

I have received requests for waivers under the Clean Air Act (CAA) by some of you or on your behalf to address fuel supply emergencies caused by Hurricane Harvey. In response to these requests, the U.S. Environmental Protection Agency has determined, and the U.S. Department of Energy concurs, that it is necessary to take action to minimize or prevent the disruption of an adequate supply of gasoline in Alabama, Georgia, Kentucky, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, Texas, Louisiana, Florida and the District of Columbia (“designated states and D.C.”).

As you know, regulations promulgated under the CAA require the use of low volatility gasoline during the summer months in order to limit the formation of ozone pollution. The regulations requiring the use of low volatility conventional gasoline (CG) during the summer season are found at 40 C.F.R. § 80.27 and in certain State Implementation Plans (SIPs). See 40 C.F.R. § 80.27 and https://www.epa.gov/gasoline-standards/gasoline-reid-vapor-pressure#table. The regulations requiring the use of low volatility reformulated gasoline (RFG) are found at 40 C.F.R. § 80.78. The RFG regulations at 40 C.F.R. § 80.78(a)(7) also prohibit any person from combining any reformulated blendstock for oxygenate blending (RBOB) with any other gasoline, blendstock, or oxygenate, except for the oxygenate of the type and amount specified by the refiner that produced the RBOB. RBOB is combined with its specified oxygenate to produce RFG.

The shut-down of nearly a dozen refineries and extreme weather prohibiting fuel barge movement in the Gulf-area, with several other refineries operating at reduced capacity, has continued to limit the production and availability of fuel to areas both within and outside of the Gulf area. In addition, the Colonial Pipeline, which has been disrupted due to storm damage, is operating at a reduced capacity. The designated states and D.C. receive a significant percentage of their gasoline supplies from the Gulf-area refineries and through the Colonial Pipeline. Consequently, the refinery shut-downs, production curtailments, limited shipments of fuel by barge in the Gulf area and pipeline limitations caused by Hurricane Harvey are creating a shortage of compliant fuel for the designated states and D.C. These supply shortages can be reduced by waiving the requirements to sell low volatility summer CG and by waiving provisions at 40 C.F.R. § 80.78(a)(7) that prohibit any person from combining any RFG blendstock for.
oxygenate blending with any other gasoline, blendstock, or oxygenate, unless certain conditions are met.

I have determined that an "extreme and unusual fuel supply circumstance" exists that will prevent the distribution of an adequate supply of gasoline to consumers. CAA § 211(c)(4)(C)(ii)(I), 42 U.S.C. § 7545(c)(4)(C)(ii)(I). This extreme and unusual fuel circumstance is the result of a hurricane, an event that could not reasonably have been foreseen or prevented, and is not attributable to a lack of prudent planning on the part of suppliers of the fuel to these areas. CAA § 211(c)(4)(C)(ii)(II), 42 U.S.C. § 7545(c)(4)(C)(ii)(II). Furthermore, I have determined that it is in the public interest to grant this waiver and that this waiver applies to the smallest geographic area necessary to address the fuel supply circumstances. CAA § 211(c)(4)(C)(ii)(III) and (iii)(I), 42 U.S.C. § 7545(c)(4)(C)(ii)(III) and (iii)(I).

The EPA, in consultation with DOE, has evaluated the impact of disruption of the fuel production and distribution system on fuel supply in the designated states and D.C. Based on this evaluation, the EPA has determined, and DOE concurs, that it is necessary to take the following action to minimize or prevent further disruption of an adequate supply of gasoline to consumers in these areas.

Federal RVP Standards

I am issuing this waiver of the federal Reid vapor pressure (RVP) requirements at 40 C.F.R. § 80.27 in the designated states to minimize or prevent problems with the supply of gasoline to these areas. Under this temporary waiver, regulated parties may produce, sell or distribute winter gasoline with an RVP of 11.5 pounds per square inch (psi) in CG areas within the designated states. This waiver is effective immediately and will continue through September 15, 2017. Since the waiver will be in effect until the end of the high ozone season, this waiver does not address downstream standards under the federal RVP requirements at 40 C.F.R. § 80.27 that apply after September 15, 2017.

Texas SIP Covered Areas

There are two provisions in the Texas federally enforceable SIP that require the use of low-volatility gasoline. The first provision requires gasoline to be sold in 95 counties in eastern Texas (Eastern Texas SIP RVP Counties)\(^1\) to have a maximum RVP of 7.8 psi during the summer "high ozone" season, which started on June 1 and ends on October 1, 2017. These federal requirements

---

are codified as part of the federally-approved Texas SIP. 66 Fed. Reg. 20,927 (April 26, 2001). I am issuing this waiver of the 7.8 RVP SIP requirements that apply to Eastern Texas SIP RVP Counties to minimize or prevent problems with the supply of gasoline to these areas. This waiver is effective immediately and will continue through September 15, 2017.

Gasoline that does not meet the 7.8 psi RVP requirements that apply in the Eastern Texas SIP RVP Counties may not be introduced into the fuel distribution system for distribution to these counties by refiners or importers after September 15, 2017. Any gasoline meeting the conditions of this waiver that is already in the fuel distribution system on September 15, 2017, may be distributed and sold in the Eastern Texas SIP RVP Counties until the supply is depleted.

The second provision of the federally enforceable Texas SIP requires the use of 7.0 psi RVP gasoline in El Paso, Texas. I am issuing this waiver of the federal enforceable SIP requirements that apply in El Paso to prevent problems with the supply of gasoline to this area. Under this temporary waiver, regulated parties may produce, sell or distribute winter gasoline with an RVP of 11.5 psi in El Paso, Texas. This waiver is effective immediately and will continue through September 16, 2017. Since the federally enforceable SIP requirement to sell 7.0 psi RVP gasoline ends on September 16, 2017, this waiver does not address downstream standards that apply after the end of the waiver period.

Reformulated Gasoline

I am issuing this waiver of the federal RFG requirements in the designated states and D.C. Under this waiver, the EPA will allow regulated parties to produce, sell or distribute conventional winter gasoline with an RVP of 11.5 psi in any RFG covered area within the designated states and D.C. Additionally, I am waiving the provisions at 40 C.F.R. § 80.78(a)(7) that prohibit any person from combining any RFG blendstock for oxygenate blending with any other gasoline, blendstock, or oxygenate, unless certain conditions are met. This waiver covers the prohibitions at 40 C.F.R. § 80.78(a)(7), and applies to all designated states and D.C.

This waiver is effective immediately and will continue through September 15, 2017. Gasoline that does not meet the RFG requirements may not be introduced into terminal storage tanks from which gasoline is dispensed into trucks for distribution to retail outlets in RFG Covered Areas in the designated states and D.C. after September 15, 2017. Any gasoline meeting the conditions of this waiver that is stored in terminal storage tanks for distribution to retail outlets and wholesale purchaser-consumers in these areas after September 15, 2017, may be distributed and sold in RFG Covered Areas in the designated states and D.C. until the supply is depleted. Likewise, retailers and wholesale purchaser-consumers in these areas may continue selling or dispensing gasoline that meets the conditions of this waiver after September 15, 2017, until their supplies are depleted.

This waiver only applies to the applicable federal requirements cited above for the designated states and D.C. Other state or local requirements or restrictions related to this matter may need to be addressed by the appropriate authorities. Should conditions warrant, this waiver
may be modified, terminated or extended, as appropriate. If you have questions you may call me, or your staff may call Phillip Brooks at (202) 564-0652.

Respectfully yours,

[Signature]
