**SUBCHAPTER E—PESTICIDE PROGRAMS**

**PART 180—TOLERANCES AND EXEMPTIONS FROM TOLERANCES FOR PESTICIDE CHEMICALS IN OR ON RAW AGRICULTURAL COMMODITIES**

**Asulam and 3,5-Dimethyl-4-(methylthio) phenyl methylcarbamate**

The Environmental Protection Agency (EPA) has promulgated regulations with respect to the establishment of tolerances for the following pesticide chemicals in Title 40 of the Code of Federal Regulations, Part 180, Subpart C:

Pesticide chemical	Section No.	Promulgation date
Asulam	40 CFR 180.360	40 F.R. 25591, June 17, 1975.
3,5-Dimethyl-4-(methylthio) phenyl methylcarbamate.	40 CFR 180.320	40 F.R. 53723, Dec. 30, 1975.

These pesticide chemicals are members of the class of cholinesterase-inhibiting pesticides and were so identified at the time tolerances were established. Pesticides which have been identified as cholinesterase-inhibitors are listed in 40 CFR 180.3(e)(5). This list is being amended at this time by alphabetically inserting the pesticide chemicals specified above in the list. In addition, because

of the number of amendments to 40 CFR 180.3 over the years, the Office of the Federal Register has requested that this portion of the regulations be recodified to untangle any editorial confusion caused by the many amendments to this section. Therefore, 40 CFR 180.3 is reproduced in its entirety without change, except with respect to § 180.3(e)(5) as specified.

Accordingly, the Agency is amending 40 CFR 180.3 effective March 2, 1976, to read as set forth below.

(Sec. 408(e), Federal Food, Drug, and Cosmetic Act (21 U.S.C. 340a))

Dated: February 24, 1976.

**DOUGLAS D. CAMPT,**  
*Acting Deputy Assistant Administrator for Pesticide Programs.*

Section 180.3 is amended by alphabetically inserting "Asulam (methylsulfanylcarbamate)" and "3,5-Dimethyl-4-(methylthio) phenyl methylcarbamate and its cholinesterase-inhibiting metabolites" into 40 CFR 180.3(e)(5) as follows. § 180.3 is reproduced in its entirety below, without any further changes, as an aid to the reader.

**§ 180.3 Tolerances for related pesticide chemicals.**

(a) Pesticide chemicals that cause related pharmacological effects will be regarded, in the absence of evidence to the contrary, as having an additive deleterious action. (For example, many pesticide chemicals within each of the following groups have related pharmacological effects: Chlorinated organic pesticides, arsenic-containing chemicals, metallic dithiocarbamates, cholinesterase-inhibiting pesticides.)

(b) Tolerances established for such related pesticide chemicals may limit the amount of a common component (such as As<sub>2</sub>O<sub>3</sub>) that may be present, or may limit the amount of biological activity (such as cholinesterase inhibition) that may be present, or may limit the total amount of related pesticide chemicals (such as chlorinated organic pesticides) that may be present.

(c) (1) Where tolerances for inorganic bromide in or on the same raw agricultural commodity are set in two or more sections in this part, the overall quantity of inorganic bromide to be tolerated from use of two or more pesticide chemicals for which tolerances are established is the highest of the separate applicable tolerances. For example, where the bromide tolerance on lima beans from ethylene dibromide soil treatment is 5 parts per million and on lima beans from methyl bromide fumigation is 50 parts per million, the overall inorganic bromide tolerance for lima beans grown on ethylene dibromide treated soil and also fumigated with methyl bromide after harvest is 50 parts per million.

(2) Where tolerances are established in terms of inorganic bromide residues only from use of organic bromide fumigants on raw agricultural commodities, such tolerances are sufficient to protect the public health and no additional concurrent tolerances for the organic pesticide chemicals from such use are

necessary. This conclusion is based on evidence of the dissipation of the organic pesticide or its conversion to inorganic bromide residues in the food when ready to eat.

(d) (1) Where tolerances are established for both calcium cyanide and hydrogen cyanide on the same raw agricultural commodity, the total amount of such pesticides shall not yield more residue than that permitted by the larger of the two tolerances, calculated as hydrogen cyanide.

(2) Where tolerances are established for residues of both O,O-diethyl S-[2-(ethylthio)ethyl] phosphorodithioate and demeton (a mixture of O,O-diethyl O-(and S-) [2-(ethylthio)ethyl] phosphorothioates) on the same raw agricultural commodity, the total amount of such pesticides shall not yield more residue than that permitted by the larger of the two tolerances, calculated as demeton.

(3) Where tolerances are established for both terpene polychlorinated (chlorinated mixture of camphene, pinene, and related terpenes, containing 65-66 percent chlorine) and toxaphene (chlorinated camphene containing 67-69 percent chlorine) on the same raw agricultural commodities, the total amount of such pesticides shall not yield more residue than that permitted by the larger of the two tolerances, calculated as a chlorinated terpene of molecular weight 396.6 containing 67 percent chlorine.

(4) Where a tolerance is established for more than one pesticide containing arsenic found in, or on a raw agricultural commodity, the total amount of such pesticide shall not exceed the highest established tolerance calculated as As<sub>2</sub>O<sub>3</sub>.

(5) Where tolerances are established for more than one member of the class of dithiocarbamates listed in paragraph (e)(3) of this section on the same raw agricultural commodity, the total residue of such pesticides shall not exceed that permitted by the highest tolerance established for any one member of the class, calculated as zinc ethylenebisdithiocarbamate.

(6) Where tolerances are established for residues of both S,S,S-tributyl phosphorotrithioate and tributyl phosphorotrithioate in or on the same raw agricultural commodity, the total amount of such pesticides shall not yield more residue than that permitted by the higher of the two tolerances, calculated as S,S,S-tributyl phosphorotrithioate.

(7) Where tolerances are established for residues of α-naphthaleneacetamide and/or α-naphthaleneacetic acid in or on the same raw agricultural commodity, the total amount of such pesticides shall not yield more residue than that permitted by the higher of the two tolerances, calculated as α-naphthaleneacetic acid.

(8) Where tolerances are established for residues of O,S-dimethyl phosphoramidothioate, resulting from the use of acephate (O,S-dimethyl acetylphosphoramidothioate) and/or O,S-dimethylphosphoramidothioate on the same agricultural commodity, the total amount of O,S-dimethyl phosphoramidothioate

shall not yield more residue than that permitted by the higher of the two tolerances.

(9) Where a tolerance is established for more than one pesticide having the metabolites 1-(3,4-dichlorophenyl)-3-methylurea (DCPMU) and 3,4-dichlorophenylurea (DCPU) found in or on a raw agricultural commodity, the total amount of such residues shall not exceed the highest established tolerance for a pesticide having these metabolites.

(e) Except as noted in paragraphs (1) and (2) of this section, where residues from two or more chemicals in the same class are present in or on a raw agricultural commodity the tolerance for the total of such residues shall be the same as that for the chemical having the lowest numerical tolerance in this class, unless a higher tolerance level is specifically provided for the combined residues by a regulation in this part.

(1) Where residues from two or more chemicals in the same class are present in or on a raw agricultural commodity and there are available methods that permit quantitative determination of each residue, the quantity of combined residues that are within the tolerance may be determined as follows:

(i) Determine the quantity of each residue present.

(ii) Divide the quantity of each residue by the tolerance that would apply if it occurred alone, and multiply by 100 to determine the percentage of the permitted amount of residue present.

(iii) Add the percentages so obtained for all residues present.

(iv) The sum of the percentages shall not exceed 100 percent.

(2) Where residues from two or more chemicals in the same class are present in or on a raw agricultural commodity and there are available methods that permit quantitative determinations of one or more, but not all, of the residues, the amounts of such residues as may be determinable shall be deducted from the total amount of residues present and the remainder shall have the same tolerance as that for the chemical having the lowest numerical tolerance in that class. The quantity of combined residues that are within the tolerance may be determined as follows:

(i) Determine the quantity of each determinable residue present.

(ii) Deduct the amounts of such residues from the total amount of residues present and consider the remainder to have the same tolerance as that for the chemical having the lowest numerical tolerance in that class.

(iii) Divide the quantity of each determinable residue by the tolerance that would apply if it occurred alone and the quantity of the remaining residue by the tolerance for the chemical having the lowest numerical tolerance in that class and multiply by 100 to determine the percentage of the permitted amount of residue present.

(iv) Add the percentages so obtained for all residues present.

(v) The sum of the percentages shall not exceed 100 percent.

(3) The following pesticides are members of the class of dithiocarbamates:

A mixture of 5.2 parts by weight of ammoniates of [ethylenebis (dithiocarbamate)] zinc with 1 part by weight ethylenebis [dithiocarbamic acid] bimolecular and trimolecular cyclic anhydrosulfides and disulfides.

[Service Order No. 1233]

PART 1033—CAR SERVICE

Railroads Authorized To Divert Traffic Consigned to Goodpasture Grain Elevator Located at Galena Park (Houston), Texas

FEBRUARY 25, 1976.

At a session of the Interstate Commerce Commission, Railroad Service Board, held in Washington, D.C., on the 25th day of February, 1976.

*It appearing*, That the grain elevator owned by Goodpasture, Inc., at Galena Park (Houston), Texas was destroyed by an explosion and fire on February 22, 1976; that approximately nine hundred (900) carloads of grain were on hand or in transit for unloading by this elevator at the time of its destruction; that rebuilding of the elevator cannot be accomplished within a reasonable time; that other arrangements for their unloading will require diversion and reconsignment of many of these cars in a manner prohibited by the applicable tariffs; that such diversions and reconsignments are necessary in the public interest to enable the prompt unloading of these cars and their continued use in transportation service and to enable the fulfillment of export grain commitments; that notice and public procedure herein are impracticable and contrary to the public interest; and that good cause exists for making this order effective upon less than thirty days' notice.

*It is ordered*, That:

§ 1033.1233 Service Order No. 1233.

(a) *Railroads authorized to divert traffic consigned to Goodpasture Grain Elevator located at Galena Park (Houston), Texas.* Any railroad holding a car loaded with grain consigned, reconsigned or intended for unloading by the grain elevator owned by Goodpasture Inc., and located at Galena Park (Houston), Texas, which originated on or before February 24, 1976, and which cannot be unloaded by Goodpasture, Inc., because of the destruction of its grain elevator, may be reconsigned, diverted or reshipped to any other grain elevator in the United States which is located on the Gulf of Mexico. In the application of this section grain elevators located on the lower Mississippi River from Port Allen, Louisiana to the mouth of the river and grain elevators located on the Houston, Texas, ship channel shall be deemed to be located on the Gulf of Mexico.
