

EMTS v4.5 Release Notes

1. Introduction

The EPA Moderated Transaction System (EMTS) version 4.5 includes system maintenance, bug fixes, and minor changes to functionality, as described below.

2. Fuels Averaging, Banking, and Trading (ABT) Functionality

A. Generating Fuels ABT credits as a remedial action

- Functionality has been added to allow the generation of additional Fuels ABT credits in situations where the volume was initially under-reported or the sulfur/benzene concentration was initially over-reported. EPA must first provide authorization within EMTS before an industry user can submit a generate transaction for the additional credits.

B. Retiring Fuels ABT credits as a remedial action

- Functionality has been added to allow the retirement of Fuels ABT credits for a prior compliance year. EPA must first provide authorization within EMTS before an industry user can retire Fuels ABT credits for a prior compliance year.

3. Renewable Fuel Standard (RFS) Functionality

A. Transaction Error Upload File – Document Information field

- The “Document Information” field in the transaction error bulk upload file is now an optional field.
