Subject: Newalta Corporation New Town SWD #1 UIC Class II Disposal Permit Application
continued subject

Dear Sirs,

Enclosed please find the completed EPA application that we have prepared on behalf of our client, Newalta Corporation, for the New Town SWD #1 proposed Class II Commercial Disposal well in Mountrail County, North Dakota. The well is located on private lands within the Fort Berthold Indian Reservation. A separate application has been prepared and submitted to the North Dakota Industrial Commission.

Please let me know if you have any questions or need additional information.

Sincerely,
ALL Consulting

//J. Daniel Arthur//

ATTACHMENT C: CORRECTIVE ACTION PLAN AND WELL DATA

**New Town SWD #1
2296' FNL & 1140' FEL
SENE Sec 17-T152N-R91W
Mountrail County, ND**

Well Name	Operator	API #	Location	Depth	Well Type	Status	Spud Date	Surface Casing	Production Casing	Liner
Nightcrawler 1-17H	Slawson Exploration Company, Inc.	33-061-00589	SWSE Sec 17-T152N-R91W 350' FSL, 1855' FEL	13952	Producing	Active	11/14/2008	9-5/8" surface casing set at 1856'. Cemented with 700 sacks to surface	7" production casing set at 9,907 ft. Cemented with 765 sacks of cement with TOC at 2,150'.	4-1/2" Liner set from 9,383' to 13,943'.

The proposed disposal zone in the New Town SWD #1 is the Inyan Kara (Dakota Group) formation. There is one well within the ¼ mile area of review for the New Town SWD #1. Geological information for the Nightcrawler 1-17H well identifies the top of the Inyan Kara (Dakota Group) at 4,853 ft. The estimated top of cement in the Nightcrawler 1-17H well is at 2,150'. No corrective action is needed on the Nightcrawler 1-17H well. Cement isolates the proposed injection formation from potential sources of groundwater.

ATTACHMENT E: NAME AND DEPTH OF USDWS

**New Town SWD #1
2296' FNL & 1140' FEL
SENE Sec 17-T152N-R91W
Mountrail County, ND**

The principal USDWs in the Forth Berthold Reservation area are the New Town Aquifer and the Sanish Aquifer. The list below shows the approximate depth and TDS of other common water sources that are available.

NAME	DEPTH	TDS (mg/L)
Colebathor Formation	0	
<i>Prulline</i> Bullion Creek Formation	23'	2,110
Hell Creek Formation	1,043'	1,530
Fox Hills Formation	1,413'	1,530

The nearest USDW to the proposed injection zone is the Fox Hills formation. In this area, the Fox Hills formation is approximately 290 feet thick with base of the formation located at approximately 1,780 feet as identified in the Nightcrawler 1-17H well, which is the only well within the ¼ mile area of review for the proposed New Town SWD #1 location. The amount of separation between the injection zone and the Fox Hills Formation is approximately 3,070 feet. The Hell Creek and Fox Hills formations are connected hydrologically and are therefore considered to be a single aquifer. This combined aquifer underlies the entire Fort Berthold formation and ranges from approximately 100 to 350 feet in thickness.

**ATTACHMENT G: GEOLOGICAL DATA ON INJECTION AND
CONFINING ZONES**

**New Town SWD #1
2296' FNL & 1140' FEL
SENE Sec 17-T152N-R91W
Mountrail County, ND**

Injection Zone:

Formation: The Cretaceous Inyan Kara (Dakota) Formation

Lithology: A sandstone, white clear to semi-translucent, fine to medium grained, some coarsely grained, subangular to well rounded quartzose grains, very friable, poorly cemented with clay and calcite cement, interbedded with gray, dark gray shale. It has fair to good porosity.

Gross interval: 4777-5762' (985 feet total) as shown on adjacent well Phoenix 1-18H attached well log

Top Confining Zone:

Formation: Cretaceous Greenhorn, Mowry Shale

Lithology: Gray to dark gray with some bentonite, tight.

Gross interval: 4058-4777 (719' total) as shown on adjacent well Phoenix 1-18H attached well log.

Bottom Confining Zone:

Formation: Jurassic Swift/Reiridon Shale

Lithology: It is gray green, brown, tight with occasional thin beds of sandstone, gray, gray-green, very fine to fine grained, glauconitic, quartzose sandstone, streaked zones poor to fair intergranular porosity.

Gross interval: 5762-6150 (388' feet total) as shown on adjacent well Phoenix 1-18H attached well log.

ATTACHMENT H: OPERATING DATA

**New Town SWD #1
2296' FNL & 1140' FEL
SENE Sec 17-T152N-R91W
Mountrail County, ND**

Newalta Corporation, proposes to drill the New Town SWD #1 well for use as a saltwater disposal well into the Cretaceous Inyan Kara (Dakota) Formation.

The proposed wellbore will be drilled to approximately 5300' MD and TVD. A 9-5/8" surface casing string will be set at 1,825' and cement will be circulated to the surface.

The production string will be set at approximately 5300' MD-TVD, and cemented to inside the surface casing.

Upon completion of drilling and setting casing the well will have a MIT test performed and witnessed by an NDIC official.

A fracture gradient of 0.80 at a depth of 4058' (top of upper confining zone) in the Greenhorn/Mowry.

This facility and well will handle and dispose by injection, produced water, flowback water and drilling fluids from local area Oil and Gas Operators in the Mountrail County area. A sample of the injectate fluid was analyzed and the results are found on the following page.

Water storage tanks and injection pumps located on the New Town SWD #1 site will provide injection into the subject well.

While it is anticipated that the facility may dispose an average of 3,500 to 4,500 barrels of water daily, the facility will be designed for and can handle over 10,000 barrels of water daily based on pressure limitations set by the NDIC. The proposed estimated average injection rate is 10,000 barrels of water per day at a pressure of 1,000 psi. The maximum proposed injection rate is 15,000 barrels of water per day at a maximum pressure of 1,400 psi.

Water will be trucked into the facility and offloaded to the produced water tanks. The transfer pumps will take the water through filter pots to catch any solids or trash prior to moving the water into the gun barrel tanks. Skim oil will be transferred into the skim oil tanks and oil bound with water will be moved to the bad oil tank. Water then settles in the storage tanks, before entering to down hole tank. The water is pumped from the down hole tank by the down hole pumps for injection into the disposal well.

where does this come from

need top of injection zone

need a sample of injectate fluid

Mountrail County, ND**

Newalta Corporation (Newalta) has jointly applied to the North Dakota Industrial Commission and the Environmental Protection Agency for a Class II Underground Injection Control permit for the injection of oilfield brine into the Inyan Kara formation of the Dakota Group (Lower Cretaceous) in the proposed New Town SWD #1, located 2296' FNL, 1140' FEL (SENE) Sec 17, Township 152 North, Range 91 West in Mountrail County, North Dakota. The well is located on private property within the boundary of the Fort Berthold Reservation.

Plotted land within boundary of Indian land

The New Town SWD #1 well will dispose of produced Bakken and Three Forks formation waters from Mountrail County and surrounding counties. The majority of the water will be pipelined to the SWD, with the remaining water trucked. This SWD is necessary to remove as many trucks as possible from the roads to prevent pollution and simultaneously increase road safety. Newalta's goal is to pipe as much water as possible to the New Town SWD #1 well, minimizing water trucks and hauling traffic.

Oil water sample?

Newalta is requesting an aquifer exemption for the Inyan Kara formation (Dakota Group) in this area for the following reasons:

1. The exempted aquifer does not currently serve as a source of drinking water.
2. The exempted aquifer has a total dissolved solids content more than 3,000 and less than 10,000 milligrams per liter (PPM) total dissolved solids (TDS) and is not expected to supply a public water supply system, and
3. The exempted aquifer cannot now, and will not in the future, serve as a source of drinking water because it is situated at a depth or location which makes recovery of water for drinking purposes economically or technologically impractical.

what area will need a boundary don't we?

and it would be removed copy from shall we fill this order doesn't apply to mountrail county

Exemption Justification

North Dakota Industrial Commission Order #3062 (Attached) granted an exempted aquifer status for the Inyan Kara formation (Dakota Group), as provided under Section 43-02-05-03 of the North Dakota Administrative code for areas surrounding and adjacent to the proposed New Town SWD #1, but excluded areas beneath the Fort Berthold Indian Reservation. *interesting*

The Inyan Kara formation (Dakota Group) is not currently being used as a source of drinking water and is not expected to supply a public water system, because higher water quality and shallower depth of the glacial drift and aquifers of Tertiary and Upper Cretaceous age. Current primary sources of drinking water in the vicinity of the New Town SWD #1 well include the New Town Aquifer and Lake Sakakawea. Water quality of the Inyan Kara (Dakota Group) aquifer in

the proposed area ranges from 4,000 to 10,000 mg/l, making it unsuitable for human consumption.

The Cretaceous Inyan Kara is commonly utilized in North Dakota as an injection interval for Class II fluids, including produced water from the Bakken and Three Forks formations and has been used successfully in the state since the 1950s. Water quality of the Inyan Kara (Dakota Group) aquifer ranges from 4,000 to 10,000 mg/l, falling within the regulatory range of 3,000 to 10,000 mg/l for an aquifer exemption.

The Inyan Kara formation in the area of the New Town SWD #1 occurs at a depth of approximately 4,777-5,762', making it economically impractical for the recovery of drinking water.

BEFORE THE INDUSTRIAL COMMISSION
OF THE STATE OF NORTH DAKOTA

CASE NO. 2717
ORDER NO. 3062

*Mountain county
not included*

IN THE MATTER OF A HEARING CALLED ON
A MOTION OF THE COMMISSION TO
CONSIDER THE DAKOTA FORMATION FOR
"EXEMPTED AQUIFER STATUS" IN
RENVILLE COUNTY AND PARTS OF
BOTTINEAU, WARD, MCHENRY, MERCER,
MCLEAN, OLIVER, STARK, MORTON,
HETTINGER, GRANT, AND ADAMS
COUNTIES, NORTH DAKOTA, AS PROVIDED
IN THE SAFE DRINKING WATER ACT.

ORDER OF THE COMMISSION

BY THE COMMISSION:

Pursuant to legal notice this cause came on for hearing at 2:00 p.m. on the 2nd day of February, 1983, in Bismarck, North Dakota, before an examiner appointed by the Industrial Commission of North Dakota, hereinafter referred to as the "Commission."

NOW, on this 23rd day of February, 1983, the Commission, a quorum being present, having considered the testimony adduced and the exhibits received at said hearing, and being fully advised in the premises,

FINDS:

- (1) That due public notice having been given as required by law, the Commission has jurisdiction of this cause and the subject matter thereof.
- (2) That the Commission is requesting an exempted aquifer status for the Dakota aquifer under lands defined in this order, as provided in the Safe Drinking Water Act and Section 43-02-05-03 of the North Dakota Administrative Code.
- (3) That the Dakota aquifer does not currently serve as a source of drinking water in the proposed exempted area.
- (4) That the Dakota aquifer ranges from a depth of 2,000 feet to 5,000 feet in the proposed exempted area, economically impractical for the recovery of drinking water.
