

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 429]

PRETREATMENT STANDARDS FOR INCOMPATIBLE POLLUTANTS FOR THE TIMBER PRODUCTS PROCESSING POINT SOURCE CATEGORY

Proposed Application of Effluent Limitations Guidelines for Existing Sources

Notice is hereby given pursuant to sections 301, 304 and 307(b) of the Federal Water Pollution Control Act, as amended (the Act); 33 U.S.C. 1251, 1311, 1314 and 1317(b); 86 Stat. 816 et seq.; Pub. L. 92-500, that the proposed regulation set forth below concerns the application of effluent limitations guidelines for existing sources to pretreatment standards for incompatible pollutants. The proposal will amend 40 CFR Part 429—Timber Products Processing Point Source Category, establishing for each subcategory therein the extent of application of effluent limitations guidelines to existing sources which discharge to publicly owned treatment works. The regulation is intended to be complementary to the general regulation for pretreatment standards set forth at 40 CFR Part 128. The general regulation was proposed July 19, 1973 (38 FR 19236), and published in final form on November 8, 1973 (38 FR 30982).

The proposed regulation is also intended to supplement a final regulation being simultaneously promulgated by the Environmental Protection Agency (EPA or Agency) which provides effluent limitations guidelines for existing sources and standards of performance and pretreatment standards for new sources within the barking, veneer, plywood, hardboard-dry process, hardboard-wet process, wood preserving, wood preserving-steam and wood preserving-boultonizing subcategories of the timber products processing point source category. The latter regulation applies to the portion of a discharge which is directed to the navigable waters. The regulation proposed below applies to users of publicly owned treatment works which fall within the description of the point source category to which the guidelines and standards (40 CFR Part 429) promulgated simultaneously apply. However, the proposed regulation applies to the introduction of incompatible pollutants which are directed into a publicly owned treatment works, rather than to discharges of pollutants to navigable waters.

The general pretreatment standard divides pollutants discharged by users of publicly owned treatment works into two broad categories: "Compatible" and "incompatible." Compatible pollutants are generally not subject to pretreatment standards. (See 40 CFR 128.110 (State or local law) and 40 CFR 128.131 (Prohibited wastes) for requirements which may be applicable to compatible pollutants). Incompatible pollutants are subject to pretreatment standards as provided in 40 CFR 128.133, which provides as follows:

In addition to the prohibitions set forth in section 128.131, the pretreatment standard for incompatible pollutants introduced into a publicly owned treatment works by a major contributing industry not subject to section 307(c) of the Act shall be, for sources within the corresponding industrial or commercial category, that established by a promulgated effluent limitations guidelines defining best practicable control technology currently available pursuant to sections 301(b) and 304(b) of the Act; provided that, if the publicly owned treatment works which receives the pollutants is committed, in its NPDES permit, to remove a specified percentage of any incompatible pollutant, the pretreatment standard applicable to users of such treatment works shall be correspondingly reduced for that pollutant; and provided further that *when the effluent limitations guideline for each industry is promulgated, a separate provision will be proposed concerning the application of such guidelines to pretreatment.* (Emphasis in *italics*).

The regulation proposed below is intended to implement that portion of § 128.133, above, requiring that a separate provision be made stating the application to pretreatment standards of effluent limitations guidelines based upon best practicable control technology currently available.

Questions were raised during the public comment period on the proposed general pretreatment standard (40 CFR Part 128) about the propriety of applying a standard based upon best practicable control technology currently available to all plants subject to pretreatment standards. In general, EPA believes the analysis supporting the effluent limitations guidelines is adequate to make a determination regarding the application of those standards to users of publicly owned treatment works. However, to ensure that those standards are appropriate in all cases, EPA now seeks additional comments focusing upon the application of effluent limitations guidelines to users of publicly owned treatment works.

Sections 429.15, 429.25, 429.35, 429.45, 429.55, 429.65, 429.75, and 429.85 of the proposed regulation for point sources within the barking, veneer, plywood, hardboard-dry process, hardboard-wet process, wood preserving, wood preserving-steam and wood preserving-boultonizing subcategories (January 3, 1974; 38 FR 938), contained the proposed pretreatment standard for new sources. The regulation promulgated simultaneously herewith contains §§ 429.16, 429.26, 429.36, 429.46, 429.56, 429.66, 429.76, and 429.86 which states the applicability of standards of performance for purposes of pretreatment standard for new sources.

A preliminary Development Document was made available to the public at approximately the time of publication of the notice of proposed rulemaking, and the final Development Document entitled "Development Document for Effluent Limitations Guidelines and New Source Performance Standards for the Plywood, Hardboard and Wood Preserving Segment of the Timber Products Processing Point Source Category" is now being published. The economic analysis re-

port entitled "Economic Analysis of Proposed Effluent Guidelines, Timber Processing Industry" (August 1973), was made available at the time of proposal. Copies of the final Development Document and economic analysis report will continue to be maintained for inspection and copying during the comment period at the EPA Information Center, Room 227, West Tower, Waterside Mall, 401 M Street SW., Washington, D.C. Copies will also be available for inspection at EPA regional offices and at State water pollution control agency offices. Copies of the Development Document may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Copies of the economic analysis report will be available for purchase through the National Technical Information Service, Springfield, Virginia, 22151.

On June 14, 1973, the Agency published procedures designed to insure that, when certain major standards, regulations, and guidelines are proposed, an explanation of their basis, purpose and environmental effects is made available to the public. (38 FR 15653) The procedures are applicable to major standards, regulations and guidelines which are proposed on or after December 31, 1973, and which either prescribe national standards of environmental quality or require national emission, effluent or performance standards or limitations.

The Agency determined to implement these procedures in order to insure that the public was provided with background information to assist it in commenting on the merits of a proposed action. In brief, the procedures call for the Agency to make public the information available to it delineating the major environmental effects of a proposed action, to discuss the pertinent nonenvironmental factors affecting the decision, and to explain the viable options available to it and the reasons for the option selected.

The procedures contemplate publication of this information in the FEDERAL REGISTER, where this is practicable. They provide, however, that where such publication is impracticable because of the length of this material, the material may be made available in an alternate format.

The Development Document referred to above contains information available to the Agency concerning the major environmental effects of the regulation proposed below. The information includes: (1) The identification of pollutants present in waste waters resulting from the processing of timber products, the characteristics of these pollutants, and the degree of pollutant reduction obtainable through implementation of the proposed standard; and (2) the anticipated effects on other aspects of the environment (including air, subsurface waters, solid waste disposal and land use, and noise) of the treatment technologies available to meet the standard proposed.

The Development Document and the economic analysis report referred to above also contain information available

to the Agency regarding the estimated cost and energy consumption implications of those treatment technologies and the potential effects of those costs on the price and production of timber products. The two reports exceed, in the aggregate, 400 pages in length and contain a substantial number of charts, diagrams and tables. It is clearly impracticable to publish the material contained in these documents in the FEDERAL REGISTER. To the extent possible, significant aspects of the material have been presented in summary form in the preamble to the proposed regulation containing effluent limitations guidelines, new source performance standards and pretreatment standards for new sources within the timber products processing point source category (39 FR 938; January 3, 1974). Additional discussion is contained in the analysis of public comments on the proposed regulation and the Agency's response to those comments. This discussion appears in the preamble to the promulgated regulation (40 CFR Part 429) which currently is being published in the rules and regulations section of the FEDERAL REGISTER.

The options available to the Agency in establishing the level of pollutant reduction obtainable through the best practicable control technology currently available, and the reasons for the particular level of reduction selected, are discussed in the documents described above. In applying the effluent limitations guidelines to pretreatment standards for the introduction of incompatible pollutants into municipal systems by existing sources in the barking, veneer, plywood, hardboard-dry process, hardboard-wet process, wood preserving, wood preserving-steam and wood preserving-boultonizing subcategories, the Agency has, essentially, three options. The first is to declare that the guidelines do not apply. The second is to apply the guidelines unchanged. The third is to modify the guidelines to reflect: (1) Differences between direct dischargers and plants utilizing municipal systems which affect the practicability of the latter employing the technology available to achieve the effluent limitations guidelines; or (2) characteristics of the relevant pollutants which require higher levels of reduction (or permit less stringent levels) in order to insure that the pollutants do not interfere with the treatment works or pass through them untreated.

As discussed in the Development Document, the process waste waters from the barking, veneer, plywood, hardboard-dry process, and hardboard-wet process subcategories contain biochemical oxygen demand, solids, and organic materials. Except for variations in amounts and concentrations, the process waste waters are similar. The process waste waters from each of these subcategories are treatable by biological methods. In the opinion of EPA suitable design and capacity can be provided for a publicly owned treatment works to effectively treat these waste waters. In this regard, all pollutants in these process waste wa-

ters controlled by the effluent limitations guidelines for best practicable control technology currently available are not incompatible as defined in 40 CFR Part 128. Accordingly, the first option should be applicable and the guidelines should not apply to operations in the barking, veneer, plywood, hardboard-dry process, and hardboard-wet process subcategories of the timber products processing industry which discharge to publicly owned treatment works.

The wood preserving, wood preserving-steam, and wood preserving-boultonizing subcategories waste waters may contain pollutants such as heavy metals, phenols, and/or oil and grease that could interfere with the operation of a publicly owned treatment works, pass through such works untreated or inadequately treated or otherwise be incompatible with such treatment works. Therefore, such process waste waters shall be required to meet the limitations presented in §§ 429.62, 429.72, and 429.82.

Interested persons may participate in this rulemaking by submitting written comments in triplicate to the EPA Information Center, Environmental Protection Agency, Washington, D.C. 20460, Attention: Mr. Philip B. Wisman. Comments on all aspects of the proposed regulations are solicited. In the event comments are in the nature of criticisms as to the adequacy of data which are available, or which may be relied upon by the Agency, comments should identify and, if possible, provide any additional data which may be available and should indicate why such data are essential to the development of the regulations. In the event comments address the approach taken by the Agency in establishing pretreatment standards for existing sources, EPA solicits suggestions as to what alternative approach should be taken and why and how this alternative better satisfies the detailed requirements of sections 301, 304 and 307(b) of the Act.

A copy of all public comments will be available for inspection and copying at the EPA Information Center, Room 227, West Tower, Waterside Mall, 401 M Street SW., Washington, D.C. 20460. The EPA information regulation, 40 CFR Part 2, provides that a reasonable fee may be charged for copying.

In consideration of the foregoing, it is hereby proposed that 40 CFR Part 429 be amended to add §§ 429.14, 429.24, 429.34, 429.44, 429.54, 429.64, 429.74, and 429.84 as set forth below. All comments received on or before May 20, 1974, will be considered.

Dated: April 8, 1974.

JOHN QUARLES,
Acting Administrator.

1. Subpart A is amended by adding § 429.14 as follows:

§ 429.14 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under 40 CFR 128.133, the effluent limitations guidelines set forth in § 429.12 shall not apply and, subject to the pro-

visions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may be introduced into a publicly owned treatment works.

2. Subpart B is amended by adding § 429.24 as follows:

§ 429.24 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 of this title, the effluent limitations guidelines set forth in § 429.22 shall not apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may be introduced into a publicly owned treatment works.

3. Subpart C is amended by adding § 429.34 as follows:

§ 429.34 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 of this title the effluent limitations guidelines set forth in § 429.32 shall not apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may be introduced into a publicly owned treatment works.

4. Subpart D is amended by adding § 429.44 as follows:

§ 429.44 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 of this title the effluent limitations guidelines set forth in § 429.42 shall not apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may be introduced into a publicly owned treatment works.

5. Subpart E is amended by adding § 429.54 as follows:

§ 429.54 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 of this title the effluent limitations guidelines set forth in § 429.52 shall not apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may be introduced into a publicly owned treatment works.

6. Subpart F is amended by adding § 429.64 as follows:

§ 429.64 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 above, the effluent limitations guidelines set forth in § 429.62 shall apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may not be intro-

PROPOSED RULES

duced into a publicly owned treatment works, except in compliance with such limitations.

7. Subpart G is amended by adding § 429.74 as follows:

§ 429.74 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under 40 CFR 128.133, the effluent limitations guidelines set forth in § 429.72 shall apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may not be introduced into a publicly owned treatment works, except in compliance with such limitations.

8. Subpart H is amended by adding § 429.84 as follows:

§ 429.84 Pretreatment Standards for Existing Sources.

For the purpose of pretreatment standards for incompatible pollutants established under § 128.133 of this title, the effluent limitations guidelines set forth in § 429.82 shall apply and, subject to the provisions of 40 CFR Part 128 concerning pretreatment, process waste water from this subcategory may not be introduced into a publicly owned treatment works, except in compliance with such limitations.
