

EMTS v5.1 Release Notes

1. Introduction

The EPA Moderated Transaction System (EMTS) version 5.1 changes were almost exclusively focused on implementing an E-Signature functionality, described below. In addition, several small updates were also implemented.

2. E-Signature Functionality

EMTS version 5.1 makes use of CDX CROMERR services to provide users with the ability to sign a Copy of Record (COR) of the transactions that have been submitted for their company. Users are able to select a frequency for the generation and signing of the CORs for their company. Note that the E-Signature functionality is available for RFS users only, and that it can only be used by users with a signed Electronic Service Agreement (ESA). Users without a signed ESA will continue to be able to use the previously existing features of EMTS.

3. Other updates

A small change was made to fix a facility display issue for QAP providers. In addition, messaging for the use of an unsupported browser was improved.
