

## RY 2018 ICR Updates for TRI-MEweb

TRI-MEweb Section	Description of Reporting Update
Form R, Part I: Section 4.1	Moved the tribal Bureau of Indian Affairs (BIA) code from the City/County/Tribe/State/ZIP Code field to its own box to increase visual clarity on the form and to increase data quality for this element.
Form R, Part II: Section 1	Added a Metal Compounds Information page for metal compounds chemicals, where the user will have the ability to select a checkbox indicating that their facility exceeds the reporting threshold for both the parent metal and metal compounds for a selected chemical and that the report includes release totals for both chemical types.
Form R, Part II: Sections 3.2 and 3.3	Within the Activities and Uses / Max On-site page, this update allows users to define subcategories of use for each activity (i.e., manufacture, process, or otherwise use), performed by the facility for a reported chemical. Users may select all that apply.
Form R, Part II: Section 6.1	Section 6.1 of the form has been set up similar to Section 6.2, where facilities can enter one POTW location and add multiple release totals per location. Each release total will require a waste treatment type P code to determine Section 8 totals.
Form A, Part II: Section 9.2	Added a Section 9.2 page to the Form A similar to Section 9.1 of the Form R, where facilities can include miscellaneous comments related to their chemical form.
Form R, Part II: Section 3.2	Added an additional checkbox to Section 3.2 (chemical processing) for recycling.
Form R, Part II: Section 5.5	Added a Waste Rock Piles section below Land Releases with a checkbox indicating that some quantities reported in Section 5.5 were managed in waste rock piles. Users can enter a total quantity (lbs) reported in waste rock piles. Users can provide optional comments that will appear in Section 9.1.
Form R, Part II: Section 8.10	Added a new Barriers to Source Reduction option B8 as "A reduction does not appear to be technically feasible" and updated the "Other" barrier option to B99. A facility can now report any barriers to source reduction, in addition to, the source reduction activities that occurred during the reporting year.
