Webinar Housekeeping

- 🌿 Today's webinar is being recorded.
- 🌿 Attendees phone lines are muted to preserve audio quality.
- 🌿 Submit a question via the Questions box on your GoTo control panel.
- 🌿 After the presentation, as time permits, our EPA presenters will answer questions submitted via the Questions box.
- 🌿 Please complete the survey at the end of today's webinar. Your feedback is important to us!

A screenshot of a web browser window titled 'Questions'. It features a large empty text area for input, a smaller text area below it containing the placeholder text '[Enter a question for staff]', and a 'Send' button at the bottom right. There are also small up and down arrow icons on the right side of the text areas.

-  Air freight is the fastest growing mode in goods movement.
-  Worldwide, aviation accounts for about two percent of global greenhouse gas emissions,
-  with emissions expected to grow at about three to four percent per year.

What is Being Done to Reduce Aviation Emissions?

-  ICAO has launched a three-pronged effort to reduce aviation's net carbon emissions to zero by 2050
 - New Aircraft Standards
 - A Market Based Trading Program (CORSIA)
 - Operational Improvements

 In addition to the aircraft, many other aspects of airport operations can impact the environment:

- Electricity consumption
- Ground transportation
- Ground support operations for aircraft
- Fuel tank farms

How Are Airports Getting Involved?

-  ACI's Airport Carbon Accreditation Program provides a common, worldwide framework for airports to:
 - Measure their carbon footprints
 - Take measures to reduce their carbon footprints
 - Engage third parties at and around the airport to measure and reduce their carbon footprints as well
 - Achieve carbon neutrality through carbon reductions and offsets
-  93 Airports worldwide, 11 in North America have been accredited

 Today we will hear from 4 Experts overseeing sustainability programs at U.S. Airports

John Galloway -- SFO Carbon Neutral Airport Program Manager, San Francisco International Airport

John oversees SFO's greenhouse gas reporting, policy, and reduction projects and leads a study on distributed energy and microgrids. He previously managed a group at PG&E connecting large-scale renewable energy power plants to the grid. He has developed action plans for energy and waste reduction, sustainability, and greenhouse gas management for private companies and Federal and municipal agencies, including the Federal Aviation Administration as an operating unit of the U.S. Department of Transportation.

Tom Green – Senior Manager, Air Cargo Operations and Development, Seattle-Tacoma International Airport

Tom Green is the Senior Manager for Air Cargo Operations and Development at Seattle-Tacoma International Airport, owned and operated by the Port of Seattle. In this role, Tom is responsible for all facets of the air cargo program at Sea-Tac Airport, from airfield cargo operations to the development of new and expanded air cargo routes and frequencies, *and* for the operation and development of related airport cargo facilities. He leads a very lean team consisting of an Air Cargo Operations Manager, and an Air Cargo Facilities Manager, and reports to the airport's Director of Operations.

Tom has been with the Port of Seattle for 18 years, from Corporate Finance to Aviation Business Development, and in Aviation Operations since 2008. Tom has Bachelor's degrees in Economics, and Biology, from the University of Texas at Austin, and a Master's Degree from the University of Washington.

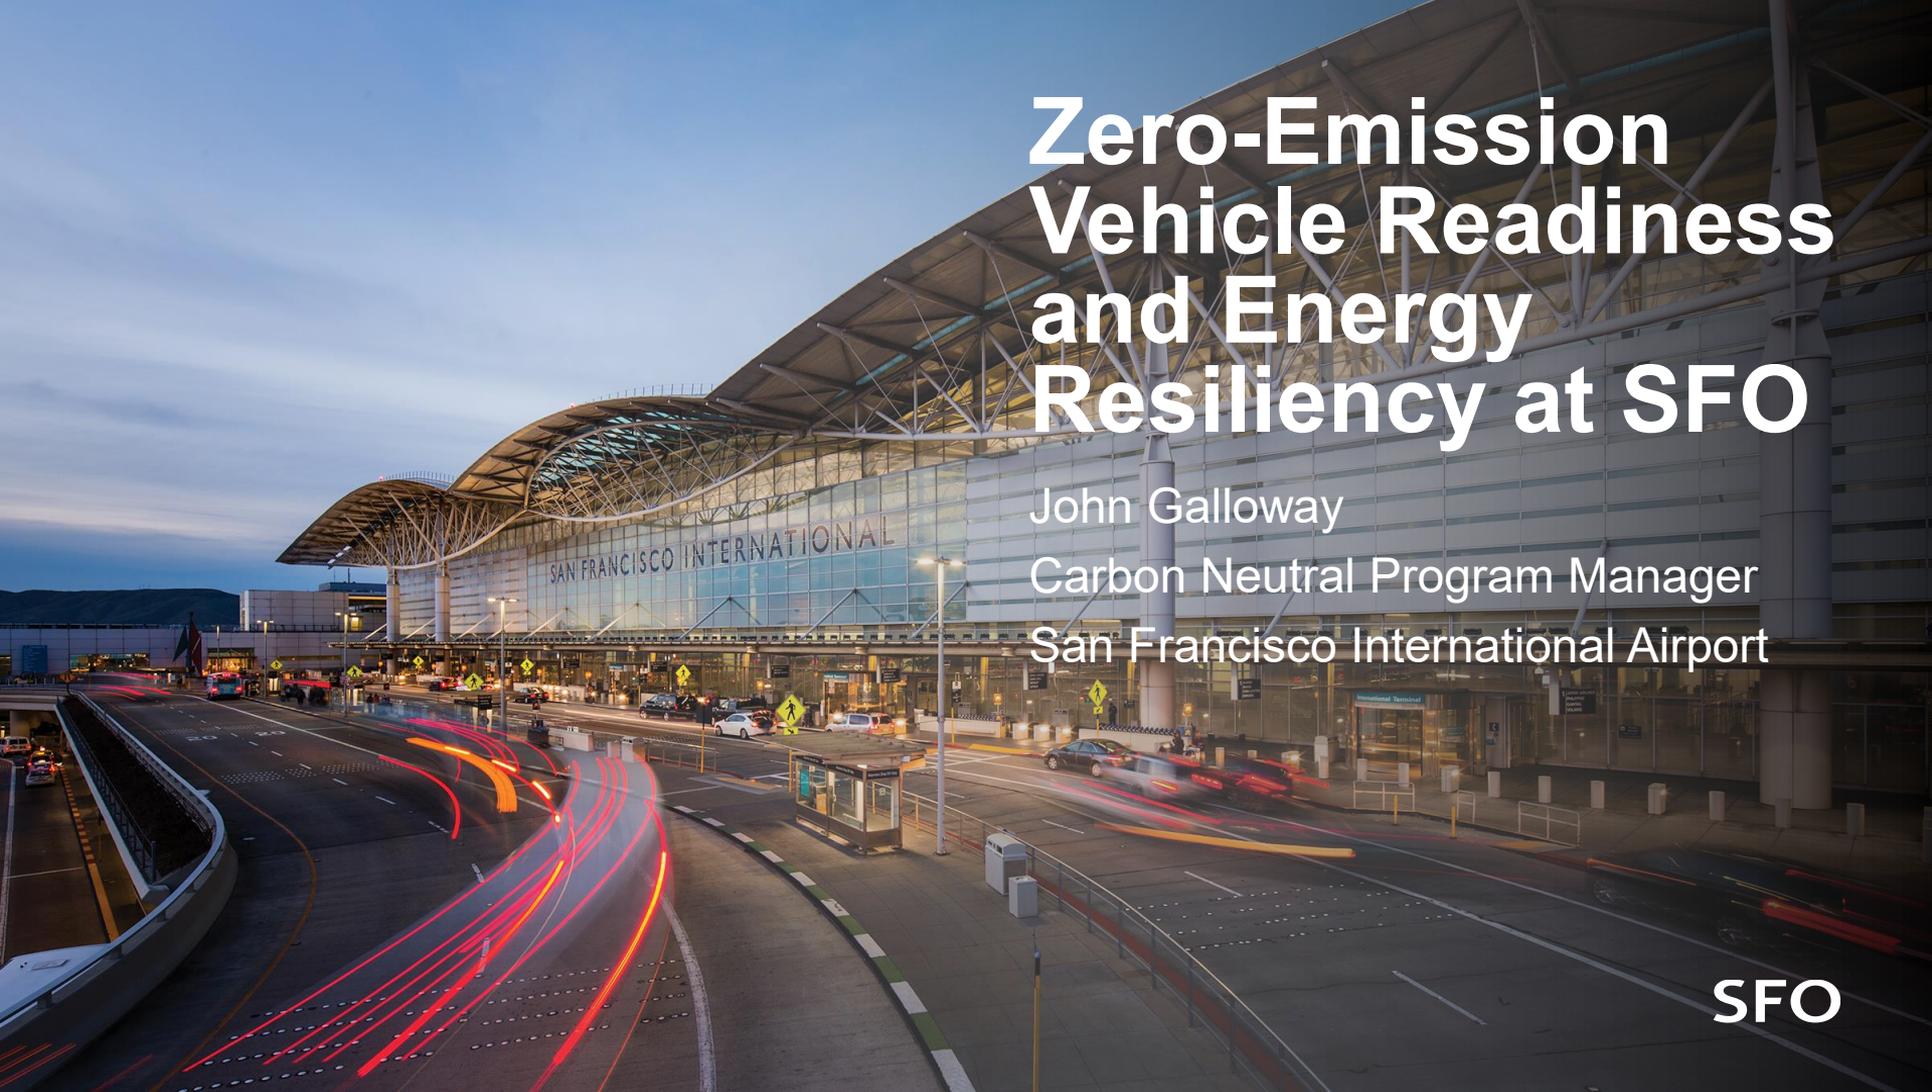

Katie Lamond -- Manager, JFK Environmental Programs at The Port Authority of New York & New Jersey

Kathryn Lamond is an Environmental and Sustainability Specialist at the Port Authority of New York and New Jersey. She supports the NEPA, environmental compliance, and sustainability programs for the five airports within the PANYNJ Aviation Department network.

Chad Reese – Environmental Affairs Manager, San Diego County Regional Airport Authority

Chad Reese is an Environmental Affairs Manager at the San Diego County Regional Airport Authority, the agency that manages the day-to-day operations of San Diego International Airport (SAN). As the sustainability program area lead at the Airport, Chad contributes to energy efficiency and renewable energy capital projects, waste reduction initiatives, clean transportation policy and projects, and behavior change programs including the Airport's new "SAN Green Concessions Program" (a green business program specifically designed for Airport concessions tenants). Chad also manages "The Good Traveler" carbon offset program developed by the Airport, and is responsible for annual greenhouse gas emissions inventories and certification via Airport Council International's "Airport Carbon Accreditation" program.

A photograph of the San Francisco International Airport terminal building at dusk. The building features a large, curved, glass and steel facade with the words "SAN FRANCISCO INTERNATIONAL" visible. The sky is a deep blue, and the terminal's interior lights are on. In the foreground, a multi-lane highway shows long, vibrant light trails from cars, primarily in shades of red and orange, indicating a long exposure. A transit stop is visible on the right side of the road.

Zero-Emission Vehicle Readiness and Energy Resiliency at SFO

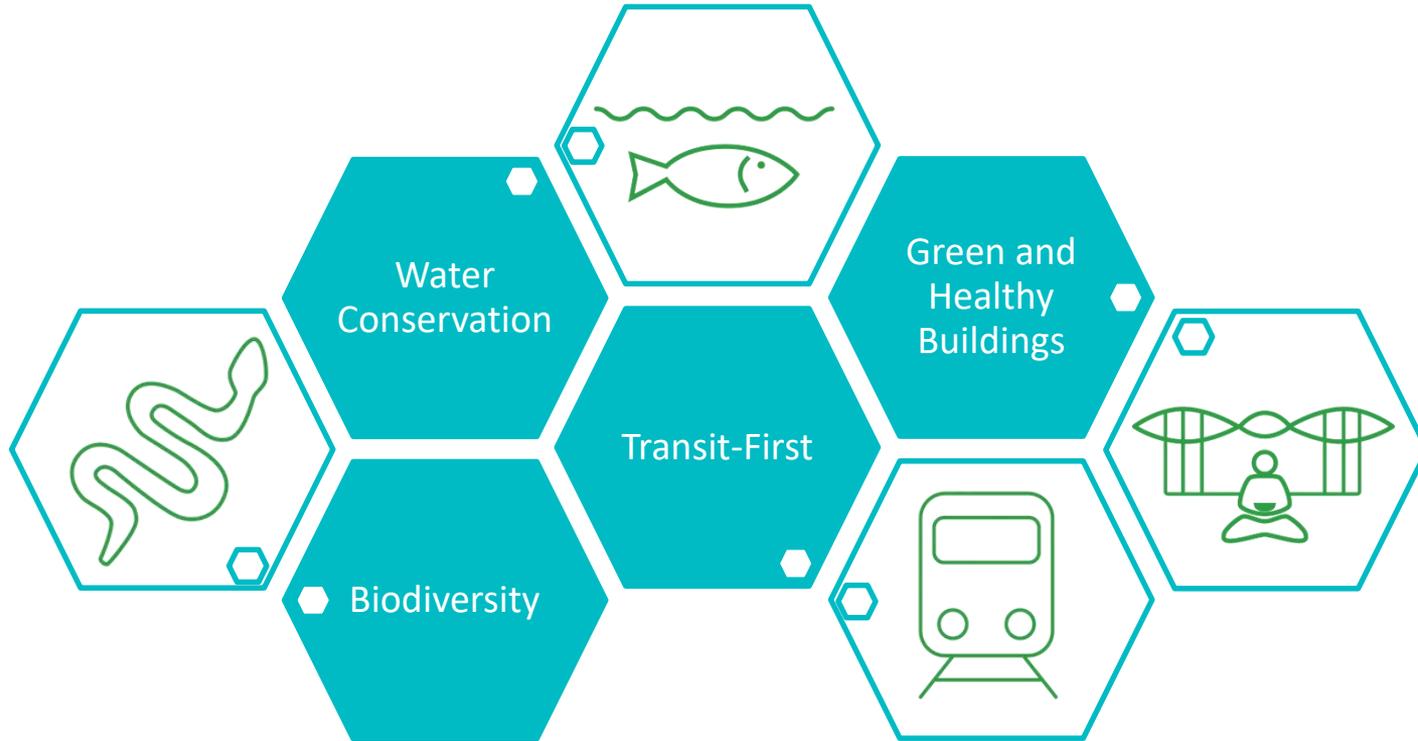

John Galloway
Carbon Neutral Program Manager
San Francisco International Airport

SFO

SFO's Big Zero Goals

SFO's Additional Goals

ZEV Readiness & Transit First

Electrification of Planes and Ground Support Equipment

Distributed Energy Resources & Decarbonization

Partnerships

SUSTAINABILITY MEASURES AT SEATTLE-TACOMA INT'L AIRPORT

Tom Green

Sr. Manager, Air Cargo
Operations and Development

Stephanie Meyn

Climate Protection
Program Manager

SEATTLE-TACOMA INTERNATIONAL AIRPORT

Fast Growing Large Hub Airport

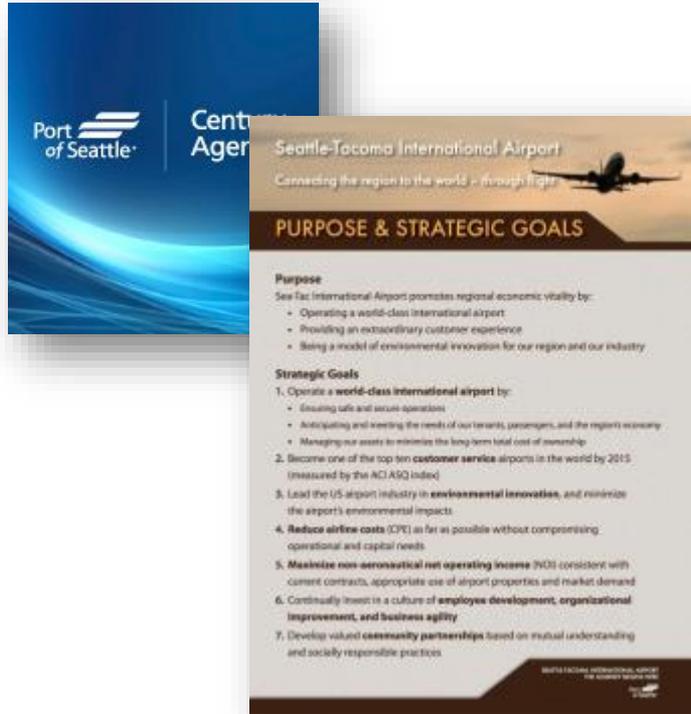

- 8th busiest in the U.S.
- 49.8 Million Passengers (2018)
- 432,315 Metric Tons Cargo
- 150,000+ Jobs

Current Projects:

- Expansion of North Satellite Terminal
- International Arrivals Facility
- Sustainable Airport Master Plan

Competing Priorities at Port of Seattle

“Meet all increased energy needs through conservation and renewable sources.”

“Reduce Scope 3 emissions by 50 percent below 2007 levels by 2030.”

“Triple air cargo volume to 750,000 metric tons.”

Sustainability Focus Areas

- Carbon Reduction
- Energy
- Transportation (landside)
- Climate Adaptation
- Water Quality
- Water Conservation
- Social Responsibility
- Economic Sustainability
- Air pollution
- Green Buildings
- Waste
 - Construction waste
 - Hazardous waste
 - Terminal and airfield waste
- Fish and Wildlife
- Noise

Measuring Sustainability at SEA

- What's directly in our control is relatively easy to measure
- Challenge to obtain sustainability metrics for activities related to airport but not within our control
 - Solutions include modeling, partnering to obtain data, or using third party, etc

2017 ENVIRONMENTAL PROGRESS REPORT

Seattle-Tacoma International Airport
Strategy for a Sustainable Sea-Tac

December 2018

2009 2010 2011 2012 2013 2014 2015 2016 2017

Seattle-Tacoma International Airport Environmental Metrics

Waste & Recycling				
Year	Terminal Solid waste generated (tons)	Terminal Solid waste recycled (tons)	Terminal Recycling rate (%)	Inc. waste generated (lbs)
2011	5,759	4,100	71%	2,022
2012	5,685	3,960	70%	1,936
2013	5,782	4,021	70%	2,007
2014	6,144	4,238	69%	2,875
2015	6,882	4,477	65%	2,811
2016	7,528	5,003	67%	1,897
2017	8,223	5,504	67%	1,875

Energy Use					
Year	Total kWh used	kWh per passenger	Therms per sq ft of terminal	Therms per sq ft of terminal	
2011	114,298,352	3.5	2,861,720	0.861	0.84
2012	113,511,095	3.4	2,723,127	0.862	0.86
2013	106,684,138	3.1	2,622,765	0.861	0.89
2014	112,028,795	3.0	2,631,209	0.876	0.89
2015	114,498,340	2.7	2,555,579	0.880	0.81
2016	112,687,013	2.6	2,610,967	0.887	0.82
2017	113,487,327	2.4	2,660,025	0.881	0.90

Stormwater & Runoff			
Year	Area of Flow Control (SqFt)	Area of Filter (SqFt)	NPDES permit excess
2011	100%	100%	24
2012	100%	100%	18
2013	100%	100%	6
2014	100%	100%	6
2015	100%	100%	22
2016	100%	100%	7
2017	100%	100%	9

Meals Donated	
Year	Number of meals
2011	5,886
2012	20,049
2013	28,279
2014	36,397
2015	35,528
2016	43,576
2017	37,814

Water Consumption		
Year	Problem Water Use (gallons)	Problem Water Use / passenger
2011	223,496,221	6.8
2012	201,857,993	6.1
2013	210,272,188	6.0
2014	228,909,371	6.1
2015	270,668,562	6.4
2016	243,862,410	5.3
2017	242,578,798	5.2

Fuel Consumption		
Year	On-site Fuel Use (MMBtu)	Off-site Fuel Use (MMBtu)
2011	121,718	14,362

Measuring Landside Vehicle Activity

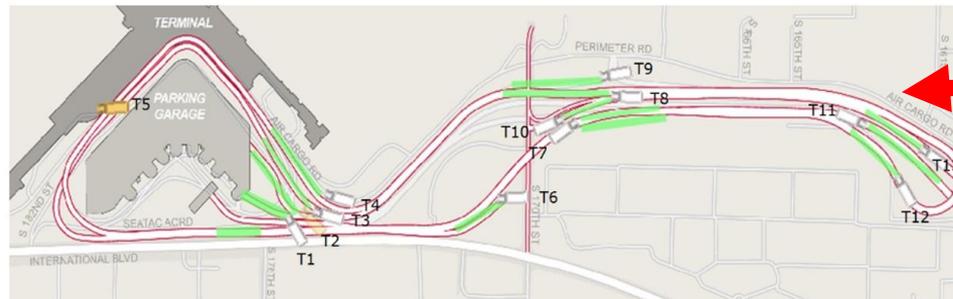

Vehicle Types Measured

- *Pick-up* taxis, limos, shuttles, etc measured with RFID-type tags
- TNC drop-off and pick-up activity data collected via app
- Rental cars, bus trips

Camera Data

- Captures vehicle counts on drives/curbside but doesn't distinguish type – *opportunity for AI/machine learning?*

Roadway Camera views

Air Cargo
Road not
captured

Sustainability Measures for Air Cargo

- As a “landlord” to air cargo operations, activity is not directly under our control, and thus difficult to measure
- Airfield infrastructure upgrades (in-ground power) have reduced fuel use and related emissions, but hard to quantify
- On the landside, amount of air cargo related trucking has increased along with growth in flown tonnage
- Efforts to analyze trucking congestion identified difficulty in tracking and measuring activity among commercial operators

What We're Currently Working On

- More complete sustainability integration into our Capital Project Planning & Approval process
- “LEAN” for process improvement in air cargo trucking
- Exploring more third-party sustainability measurement systems (cameras, app-based, etc)
- Expanded social sustainability programs such as diversity in contracting
- Expanded use of renewable energy (electricity, gas, and liquid fuels)

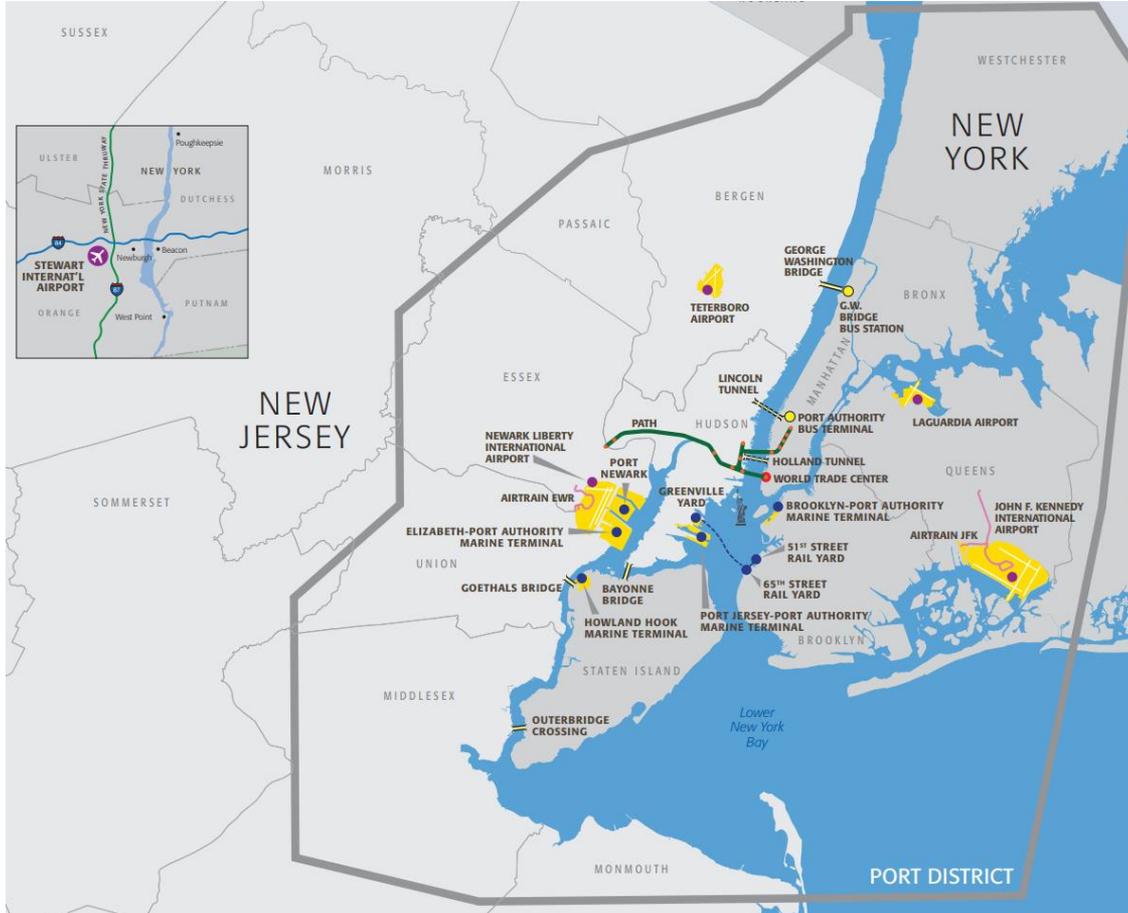

Sustainability at Our Airports: Embracing the Paris Climate Agreement

"Sustainability Measures at Airports"

EPA SmartWay Webinar

Chad Reese

Manager, Planning &
Environmental Affairs

June 5, 2019

San Diego International Airport

An aerial photograph of the San Diego International Airport, showing the terminal building, runways, taxiways, and surrounding urban and natural areas. The airport is situated on a narrow strip of land between the city and San Diego Bay. Several callout boxes are overlaid on the image, providing key statistics and facts about the airport's operations and capacity.

51-Gate
Large Hub Airport

Over 24 Million
Passengers

Busiest Single Runway in
the US

Confined to 661 Acres

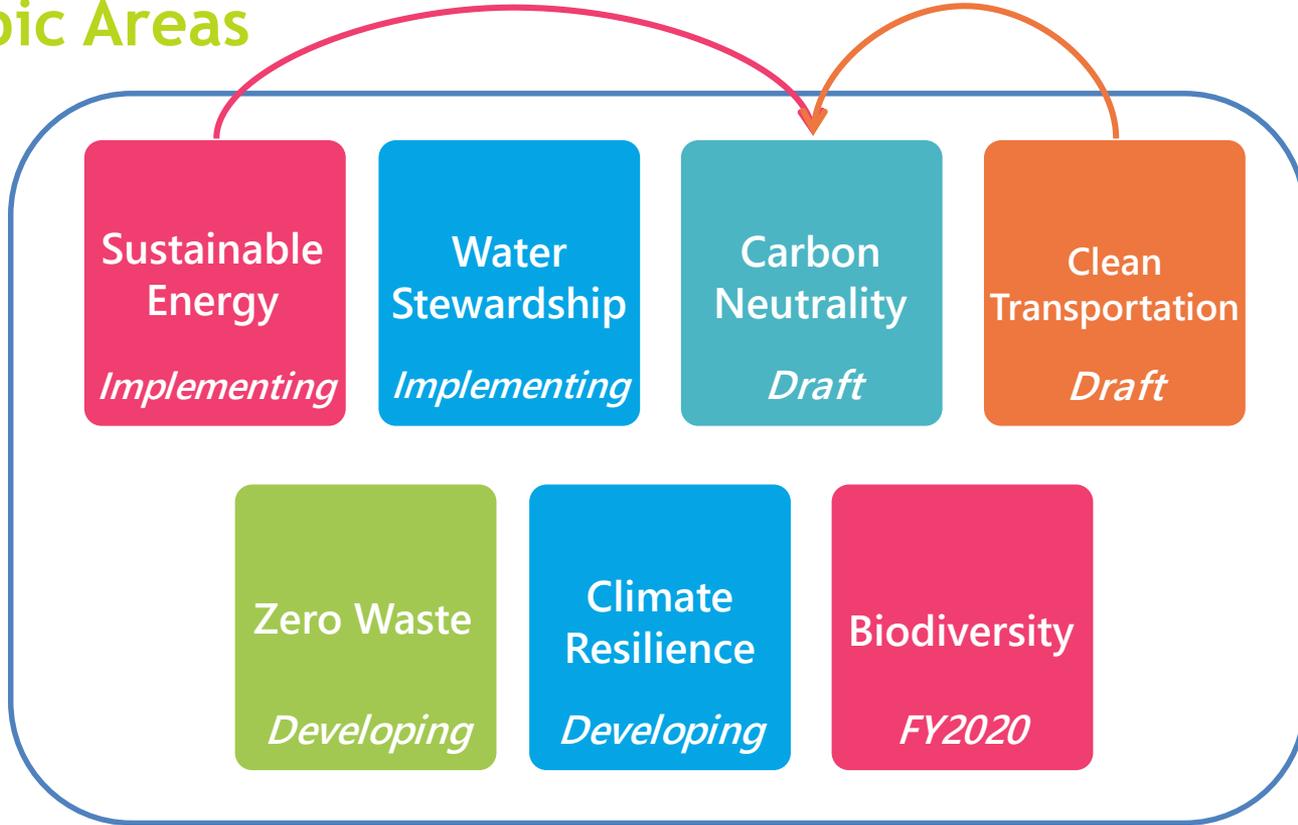

50% Passenger Growth
Expected by 2035

SAN Definition of Sustainability

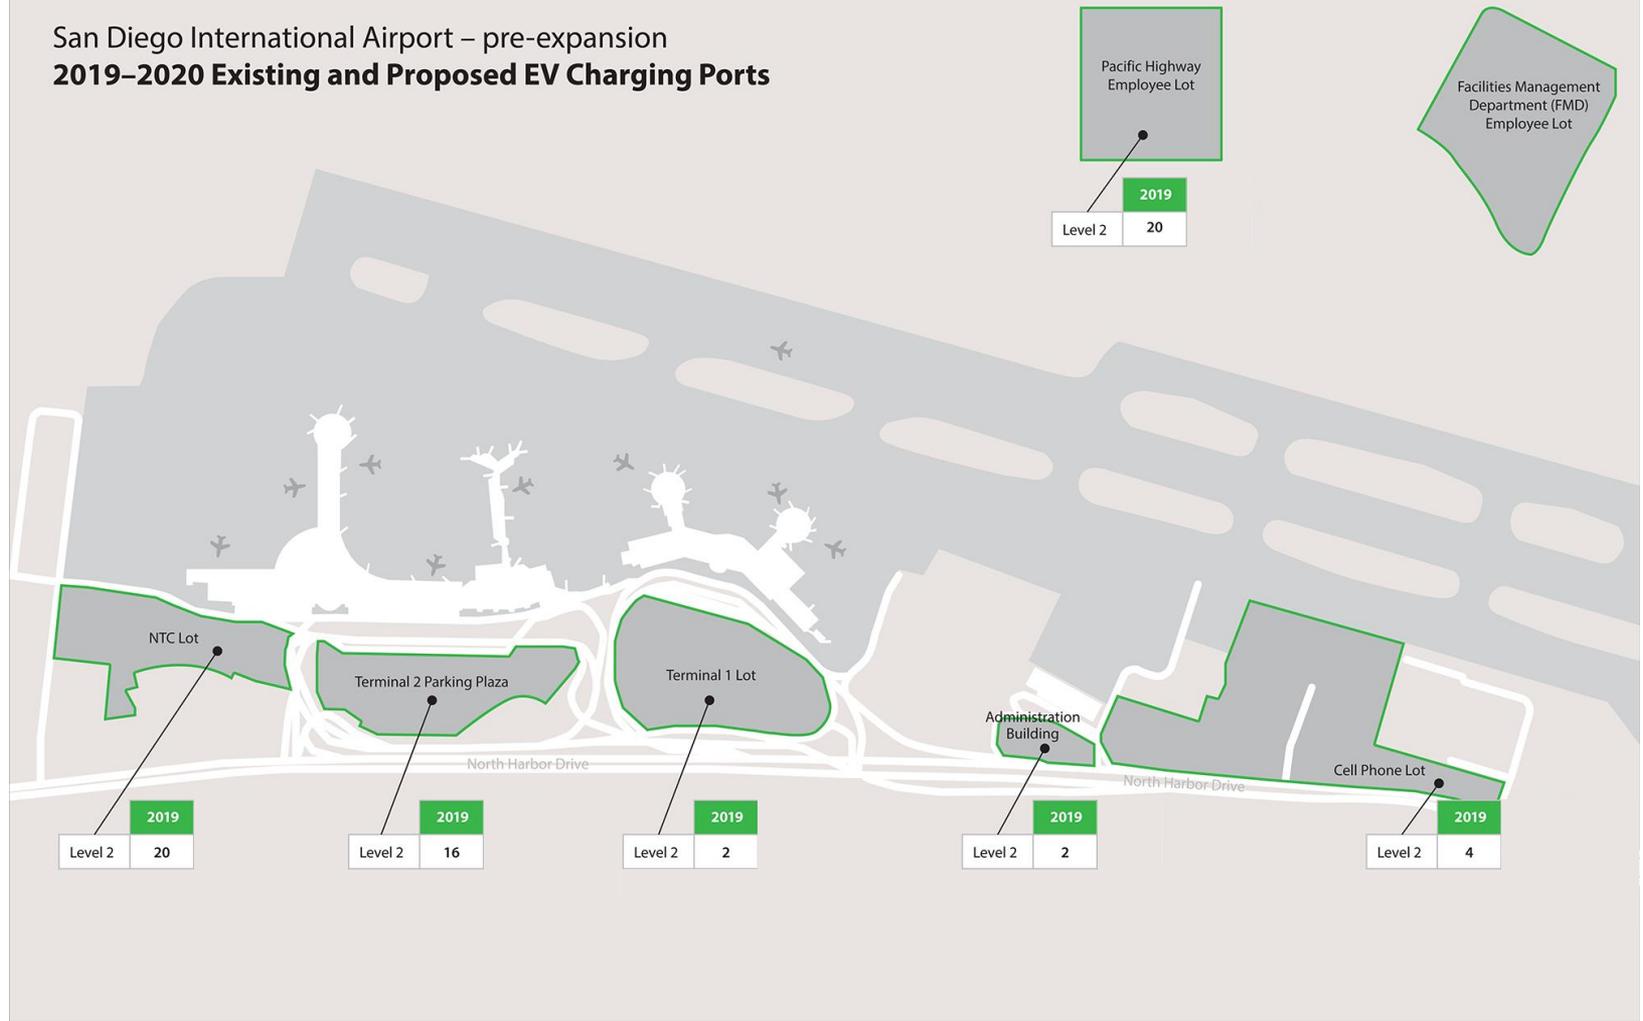

“Plan and build an enduring and resilient customer-focused enterprise by effectively managing our financial; social; and environmental risks, obligations and opportunities.”

Sustainability Management Planning

Main Topic Areas

San Diego International Airport – pre-expansion 2019–2020 Existing and Proposed EV Charging Ports

Clean Transportation Plan

01	Minimize the Airport's reliance on fossil fuels for Authority fleet vehicles and equipment.	<ul style="list-style-type: none"> - Alternative Fuels and Vehicle Efficiency 	Conversion of Authority-owned vehicles to hybrid, electric, or alternative fuels.	100%	by 2035
			Conversion of Authority-owned equipment to hybrid, electric, or alternative fuels.	80%	by 2035
02	Provide enabling infrastructure for electric and other alternative fuel vehicles used by employees, passengers and tenants.	<ul style="list-style-type: none"> - Alternative Fuels and Vehicle Efficiency - Employee Transportation - Efficient and Sustainable Transportation Infrastructure - Congestion and Emissions Reduction 	Airport wide parking (employee, passenger, etc.) designated for clean air vehicles* and/or EV-ready with pre-wiring.	Step 1: 20% of total spaces	Step 1 by 2025
			Step 2: 50% of total spaces	Step 2 by 2035	
03	Incentivize adoption of low carbon strategies by ground transportation operators.	<ul style="list-style-type: none"> - Alternative Fuels and Vehicle Efficiency - Congestion and Emissions Reduction 	Use GHG rating (GGR**) to measure GHG intensity (gCO ₂ /mile) of ground transportation providers (taxis, shuttle buses, hotel vans, limos, TNCs, etc.).	Step 1: minimum GGR of 9	Step 1 by 2020
			Step 2: GGR of 10	Step 2 by 2030	
04	Provide regional leadership, collaboration, and infrastructure to increase use of public transit and other sustainable methods of transportation.	<ul style="list-style-type: none"> - Public Transit - Congestion and Emissions Reduction - Employee Transportation 	Passengers/employees that use sustainable transportation methods (e.g., public transit, vehicles sharing options such as carpool/vanpool, bicycle) to travel to/from the Airport.	15%	by 2035
05	Encourage and help propel reductions in air emissions from airline, tenant, contractor, and construction vehicles and equipment.	<ul style="list-style-type: none"> - Construction - Alternative Fuels and Vehicle Efficiency - Congestion and Emissions Reduction 	Conversion of non-authority vehicles to hybrid, electric, or alternative fuels.	100%	by 2035

Clean Transportation Plan

GOAL 1: Authority's Fleet Vehicles & Equipment

Metrics	Targets
Conversion of Authority owned vehicles to hybrid, electric, or alternative fuels.	100% by 2035
Conversion of Authority owned equipment to hybrid, electric, or alternative fuels.	80% by 2035

Clean Transportation Plan

GOAL 2: Clean Vehicles & Airport-Wide Parking

Metric	Targets
Airport-wide parking (employee, passenger, etc.) designated for clean air vehicles* and/or EV-ready with pre-wiring.	Step 1: 20% by 2025 Step 2: 50% by 2035

SDG&E Power Your Drive

- SDG&E installed, and will operate and maintain 10 dual-port chargers for 10 years (allows 20 spaces for electrical vehicles to be charged)
- ChargePoint chargers are located at the Employee Parking Lot
- The cost of the energy used to charge an EV is billed directly to the driver via a separate SDG&E Power Your Drive account.

The First
ENERGY STAR®
Certified EV Charger

Clean Transportation Plan

GOAL 3: Low Carbon Ground Transportation Operators

Metrics	Targets
Use GHG rating (GGR*) to measure GHG intensity (gCO _{2e} /mile) of ground transportation providers (taxis, shuttle buses, hotel vans, TNCs, etc.)	Step 1: GGR of 9 by 2020 Step 2: GGR of 10 by 2030

*GGR of 9 = 205-237 g/mile; GGR of 10 = 0-204 g/mile (www.fueleconomy.gov)

Clean Transportation Plan

GOAL 4: Transit & Other Sustainable Modes

Metrics

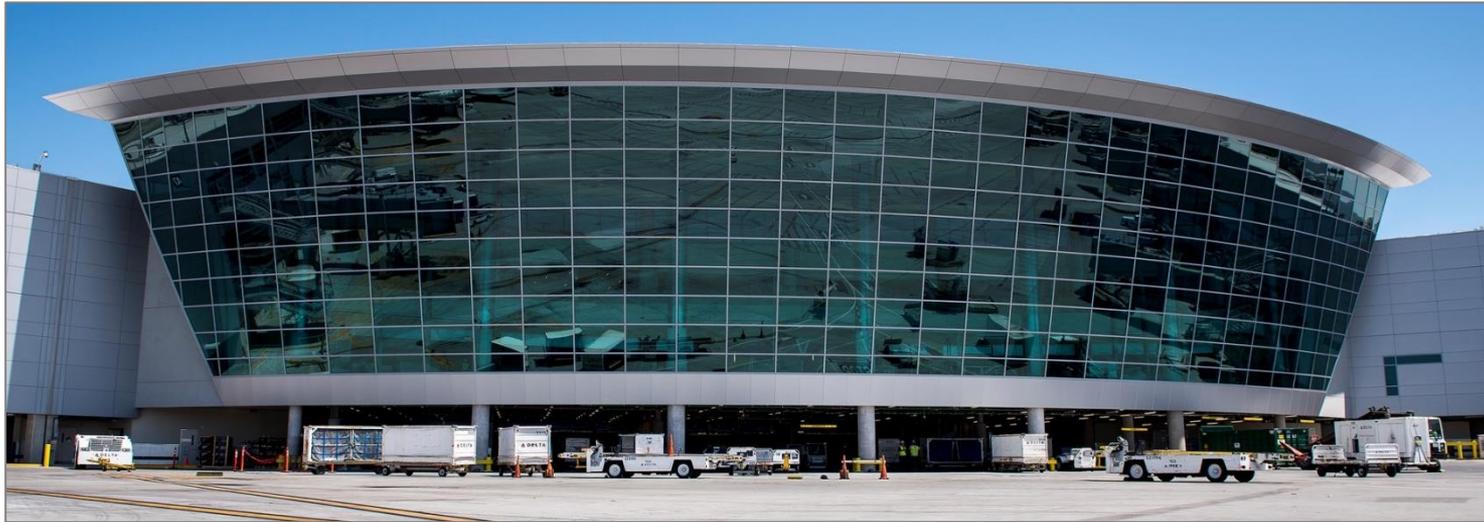

Passengers and employees that use sustainable transportation methods (e.g. public transit, vehicles sharing options such as carpool/vanpool, bicycle) to travel to/from SAN

Targets

15% by 2035

Clean Transportation Plan

GOAL 5: Airline, Tenant, & Contractor Clean Vehicles

Metrics	Targets
Conversion of vehicles to hybrid, electric, or alternative fuels	100% by 2035
