

## Q&A

- **Attendee:** Did you try misting the brick before applying the gel?
  - **Ryan James:** We have not done that. Our elevated humidity is not a complex chamber; it is essentially like walking into a refrigerator. We are also just running a regular humidifier. That is an interesting thought, though. I would be curious to know what it would do to the removals.
- **U.S. Nuclear Regulatory Commission:** I like that this presentation illustrates the difference in transitioning from a laboratory scale experiment to real-world scenarios. During a wide area decontamination event, there are many considerations that you might not be able to think of in that transition. In Japan, they tried using these coatings and it did not work out for them.
  - **Ryan James:** Yes, it is useful in industrial and cleanup settings. I still wish they would have worked out.
