

New LMOP Resource on Landfill Gas Collection Systems

The U.S. EPA Landfill Methane Outreach Program (LMOP) is pleased to inform its Partners and other interested stakeholders about a **new LMOP resource related to landfill gas (LFG) collection systems**. LMOP has developed two new chapters for the program's [LFG Energy Project Development Handbook \(PDH\)](#):

- *Chapter 7. Best Practices for Landfill Gas Collection System Design and Installation* provides information on site-specific factors that influence the design of a gas collection system and discusses a variety of collection component options to help operators minimize surface emissions and system downtime.
- *Chapter 8. Best Practices for Landfill Gas Collection System Operation and Maintenance* presents information on managing liquids in a gas collection system, wellhead monitoring and health and safety considerations to help operators achieve a safe and functional system.

These new chapters are available online individually and as part of the full PDH document. All the PDH chapters are described at <https://www.epa.gov/lmop/landfill-gas-energy-project-development-handbook> and the files are available for download at <https://www.epa.gov/lmop/landfill-gas-energy-project-development-handbook-files>.

Please let us know of any questions about this new resource.

Sincerely,

The LMOP Team

To request removal from this email list, please reply to this message. For further information or questions about LMOP, please do not reply to this email message, but rather visit the [LMOP website](#). Thank you.
