Data Centers across 3 continents,
and growing...

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

Procure power at scale and provide it as needed to clients

Energy consumed on-site is our *client's* energy footprint and Scope 2 volume

We buy the power clients would choose to buy for themselves in support of their environmental goals

Our Commitment

By 2040 we will use 100% clean electricity, 100% of the time in our data centers.

To accelerate decarbonization of the grid, we are going beyond our RE100 commitment of 100% renewable electricity.

We will use the Google methodology for matching site by site electricity use with local clean power generation every hour, every day to achieve 24/7 clean power

Our Commitment

By 2040 we will use 100% clean electricity, 100% of the time in our data centers.

To accelerate decarbonization of the grid, we are going beyond our RE100 commitment of 100% renewable electricity.

We will use the Google methodology for matching site by site electricity use with local clean power generation every hour, every day to achieve 24/7 clean power

24/7 CFE draws our attention to key challenges

Knowing the generation source of our electricity

Knowing our energy consumption on an hourly basis

Getting started

Speak with your energy provider

- Hourly energy use data
- Incentives for energy efficiency, solar or storage
- New options for hourly matched renewable supply

Platforms to support your program

- Reporting current baseline and performance
- Assist with procurement transaction
